Architects have received bids.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted

The chap who bags the glittering prize
Is the fellow who learns to advertise

Buy pure lime, 99% pure, no core, no grit. **DAVID FRANCE CO.,**

EDITORIAL NOTES.

The production and consumption of cement in the United States is now almost one barrel a year for every man, woman and child of the population. The production has increased 1,100 per cent. in the last fifteen years, and, at the same time, the price has been going steadily downward, owing to improved methods of manufacture, while standards of production have been formulated by technical bodies, so that all Portland cement is now practically uniform and dependable. This is something that could not have been said of the cement which the Romans used two thousand years ago, or even of the cement produced in this country ten or fifteen years ago. Some of it was good, and some of it was bad. Now it must all meet certain standard specifications, or it will not be accepted by the consumer.

* * *

The suggestion of Chairman Busch, of the Board of Trade's committee on municipal affairs, that spaces be reserved along the Parkway for the future accommodation of the city buildings, says the Philadelphia Evening Bulletin, is wholly practicable and desirable. It is fitting that the Parkway should become a civic centre, the Art Museum, Public Library, Public Auditorium, forming a nucleus, to which undoubtedly will be added the Hall of Justice, and to the company of these a single municipal capitol, or a group of buildings, might properly be annexed.

The community would do well to get the idea in its mind that the removal of City Hall is within the range of possibility. The choosing of a tentative site for its successor, on the Parkway or elsewhere, would not be premature.

* * *

Among interesting facts gleaned from a study of American ports, made under the auspices of the Bureau of Foreign and Domestic Commerce, are the following:

American ports are better suited by nature to handle the largest liners than any of the Old World ports; Boston has the most expensive, as well as the largest, pier in the United States, if not in the world, and will soon have the largest dry dock in the Western Hemisphere; the most noteworthy port development in recent years has been on

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

the Pacific Coast, at San Francisco, Seattle, Los Angeles, Portland, Tacoma, and San Diego.

Stress is laid on the increasing influence of the Federal Government on port development.

THE SCIENCE OF FIRE PREVENTION

(The accompanying article contains excerpts from a pamphlet published jointly by the New York Chapter of the American Institute of Architects and the New York Board of Fire Underwriters, and was prepared by the Committee on Co-operation, Julius Franke representing the Institute and F. J. T. Stewart the Underwriters.)

The subject of the science of fire prevention and protection is attracting much attention here and abroad. Exhaustive tests of fire resistive materials and fire extinguishing apparatus of one kind or another are being conducted all the time under scientific management. The record and results of these tests are carefully kept and generally published.

In addition to general standards adopted by the insurance companies for structural parts, such as for walls, floors and fireproofing, there are also standards for fire doors, wired glass windows and doors and new structural materials. These standards have generally been established as a result of fire tests or by the recommendation of the National Fire Protection Association.

The purpose of the National Fire Protection Association is "to promote the science and improve the methods of fire protection and prevention; to obtain and circulate information on these subjects and to secure the co-operation of its members in establishing proper safeguards against loss of life and property by fire."

Many Devices Tested.

Many specific devices and materials made to conform to approved specifications are tested and approved by the Underwriters' Laboratories. Inspection is also made at the shops of manufacturers, and labels issued by the Underwriters' Laboratories as evidence of compliance with standards, are affixed to the appliances. Architects and builders may thus specify and procure inspected and "labeled" fire doors, windows, fire shutters, stair and elevator doors, rolling shutters and hardware, electrical wire, fusible links for doors, watchmen's clocks, hose, waste cans, brooders, incubators and various other structural parts, devices or materials affecting the fire hazard.

Broadly speaking, there are six important considerations which enter into the "hazard" in fire insurance, and likewise the science of fire prevention and protection.

Exposure to Fire.

The architect may have little to do with the exposure to fire from without, as the site is generally chosen before he is called in. The

exposure depends upon the width of streets or courts, the space between the new building and the neighboring buildings, and the nature of such neighboring buildings.

This hazard may be reduced, however, if the building is planned without openings facing the danger, or if wired glass windows (1), shutters, doors (2) and skylights (11), facing such exposure furnish standard protection. Outside sprinklers (3) and fire hydrants (4) can also be provided to reduce the danger.

The hazard of construction of the structure is affected by the materials and workmanship entering into the construction, their thickness and strength.

An approved Building Code is generally utilized by the Underwriters in judging the adequacy of wall thicknesses and the strength of materials.

Structural steel members are required to be thoroughly covered with fire-resistive materials; as terra cotta, brick, concrete or other approved material of adequate thickness. The material and workmanship should also be of such that, in case of fire, a powerful hose stream will not destroy the protection and expose the steel to the flame.

The National Fire Protection Association at its annual convention in May, 1913, adopted regulations for a "Standard Fire Resistive Building of the Highest Type." This standard is for a building that would resist a temperature of 2,000 degrees Fahrenheit for four hours without material injury to its structural parts. Although impractical to erect all buildings as prescribed by this document, it is, nevertheless, an ideal that can be approached in any building at least in part. A suggested building ordinance especially intended for small towns and villages was also adopted in 1913 and treats especially of protection for the "non-fireproof" buildings.

Plan of the Building.

The hazard involving the sale of the building includes questions of height, area, the location of fire stops, facilities for the escape of the occupants and facilities for access for firemen.

The height of a building seriously affects its insurance, because, beyond a certain height the fire departments cannot be depended upon, for the present at least, for effective work.

It is evident also that the larger the area the greater the danger of fire getting beyond control. When the area of any floor exceeds 5,000 square feet the insurance cost is generally higher. Fire stops are provided to decrease the area in large buildings.

Fire stops are either brick or concrete "fire" walls, no less than 12 inches thick, to prevent the fire spreading in a horizontal direction.

To prevent the fire spreading in a vertical direction through openings between stories, such as staircases, shafts, elevators, vents, ducts, etc., such openings are shut off by fire stops. These should be of at least the same fire resistive quality as the floor construction dividing the stories.

For the purpose of allowing communication between the various areas in a horizontal direction and between the floors in a vertical direction, doors are provided which should be standard. Of other elements included in plan and construction are the electric wiring and fittings, protection against lightning, whether the building be fire-resistive or mill construction, and windows of wired glass with metal frames. Special standards have also been adopted for the construction of railway car houses and for gravity tanks.

Fire Extinguishing Equipment.

The hazard of the fire extinguishing equipment is affected by the character of the protective apparatus, either stationary or movable, such as sprinklers, standpipes, pumps, valves, water supply, hand extinguishers, watchman's clock, fire-drills, fire alarms, hose, etc., all designed to extinguish fire in its incipient stage.

The consideration of the nature of the occupancy includes these points: Whether the merchandise and temporary fixtures are combustible or not, whether explosives or highly inflammable materials are stored, whether there are few or many employees, the nature of the work being done, whether or not the place is kept clean, whether or not the fire extinguishing apparatus is kept in order, and whether or not the special mechanism or apparatus being used is standard and properly taken care of. Gas machines and engines, incubators and brooders, kerosene oil pressure systems, oxy-acetylene heating and welding apparatus, waste cans and ash cans, films, oil storage, and gasoline stoves for cooking, are all, if improperly installed, hazards of this nature.

The danger of fire due to carelessness or viciousness on the part of the owner, is commonly known among Underwriters as the moral hazard. It is quite distinct from the physical hazard, but a careful investigation of the moral hazard is essential in insurance.

Public Fire Protection.

The public fire protection, which depends on the efficiency of Municipal Departments—notably the Fire, Water and Building Departments, has an important bearing on the fire loss and consequently the cost of insurance. Architects, builders and property owners can exert an important influence in fire prevention by encouraging the enactment of adequate laws on these subjects and insisting on an efficient administration of such laws.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 35

PHILADELPHIA
August 30, 1916

As The Editor Sees It

Starrett and the System.

I think I have, before, made reference in these columns to the series of articles on building, and the building trades, that Mr. Theodore Starrett is contributing to the pages of *Architecture and Building*. Mr. Starrett is by no manner of means a great writer. He uses slang, colloquialisms and now and then a decidedly slipshod order of English. But Mr. Starrett's articles are for all of that a never-ending source of delight to builders. Why? Because if there is any one game on the face of the globe that Theodore Starrett knows, knows intimately and personally, by first-hand contact and from the ground up, it is the building game.

To enable the lay reader to get the right focus on the point of view of Mr. Starrett it is necessary to say that the building game is in a bad way. Indeed the element of competition is rapidly approaching a stage at which it might be said to recall the fabled cats of Kilkenny. Lest one here and there among our readers may be to some extent unfamiliar with these gaelic felines we shall pause to remark that:

There were once two cats in Kilkenny
Each thought there was one cat too many,
So they quarreled and they fit
And they scratched and they bit
Till, instead of two cats, there weren't
any!

The application ought to be obvious.

A big job is up for the letting. A half-dozen "wide-awake" building firms start to figure. All hands pare and prune and cut and slash in the effort to be lowest bidder. One of the parties to the interesting little guessing contest emerges "winner." He is awarded the contract. If the "subs" are tractable, the weather conditions right, there are no delays in delivery and the labor question doesn't back-fire, he comes out with a

profit. A mighty slender profit to be sure, but—a profit. If any one of the several provisos mentioned happens to develop a slight kink in its steering gear he comes out a loser and stands, conditions being favorable, an excellent chance at life membership in the Down-and-Out Club.

I am treating the subject, as you will observe, in the vein of levity. It is not, actually, anything like so funny as I am picturing it.

* * *

Big Jobs and Little Jobs.

BUT to return to Theodore Starrett. An article in the July number of *Architecture*, from the Starrett pen is captioned "Big Jobs and Little Jobs." Here is one of the stories, based on hard, practical fact, that Starrett narrates therein:

"In the city of Chicago at a certain time not so very long ago the most prominent builder was a mason contractor who got almost every big job that was going. I knew him well, and it wasn't George A. Fuller either. I knew Fuller well, too.

"This mason builder was an awfully good fellow, as they say, and he was talking to me once in a whimsical mood about the profits. He had a friend, an alderman on the West side, who had a carpenter shop in which or by which he managed to keep the wolf from the door. My friend twitted the alderman on not getting in on any of the big work. The alderman held his ground and said he was satisfied to worry along on small jobs.

"They compared notes. The carpenter with his modest shop had done \$75,000 worth of work in the year just passed and had made \$25,000 profit. The big fellow had done \$500,000 worth and had made \$15,000.

"The moral, I hope, is self evident. People who hunt work where everybody else is hunting it are forced to pretty slim picking."

Starrett adds that while it is undeniable that there are big builders who do a profitable business it is his guess that they do it just as our friend the alderman did it. That is, they get their contracts before their business rivals know anything about them and thus avoid what has come to be an almost ruinous competition.

* * *

Truth About Contracting.

SPEAKING of the new men who try to break into the building game with the idea that it is easy picking Starrett remarks:

"I suppose there are thousands upon thousands still who have that wrong notion about contracts and contractors, and on the theory that there's one born every minute the supply is likely to last forever and increase as time rolls on.

"The truth about contracting, when it involves trafficking in the souls of trade unionists—that's what all contractors do, isn't it? Traffic in the souls of the down-trodden workman—the truth about that kind of contracting is that it is getting to be the deadliest game as far as one's fortunes are concerned that any man can engage in.

"Just think of men who have to depend on unionists to do their work figuring on undertakings that involve so much—so very many different kinds of things to be done, so many different interests to be harmonized, when the very nature of things invites, if not indeed compels, conflict of interest from the start—think of them figuring on building a skyscraper in a certain time regardless of weather and figuring so closely and scientifically that sometimes two or even three bids are the same and all the low ones are too

low! Think of them carrying through this work, taking all this responsibility, for a paltry five or even ten per cent. profit!

"Why, the man who builds one of those big 'scrapers on time ought to make enough profit to retire.

"But owing to the enormous cost of the labor involved in these undertakings the whole business is subject to the most deadly competition.

"Something is rotten in the State of Denmark.

* * *

Squeezing the Sub.

I MET a man the other day who seems to have given a little thought to this subject. He is a builder; to be more exact he is a sub. He has a friend who is going to build and when the time comes he expects to ask that friend for the part of the work that he does. The friend has had the plans prepared and has been taking bids from builders, that is general contractors, who are willing to bet a million that they can do the work cheaper than anybody else.

"Asked by his friend, the sub, what was doing, the prospective owner said: 'Oh, I'm in no hurry to let the contract. The builders are at work on the figures now and *doing things to each other* in great shape.'

"You know what that means, little builder, don't you?

"A nice mess the subcontractors will go up against when that contract is finally put 'on the market.'

"Oh, I pity the poor subcontractors."

That's Starrett at his best and Starrett knows.

* * *

Comment and a Suggestion.

IN a recent issue of THE GUIDE I turned loose a few random observations on this subject of the present system of bidding. *The Bulletin of the Master Builders' Exchange* makes these the theme of comment in the August number as follows:

Some day the builders will get together and agree to quit guessing. And when that day arrives there will be fewer buildings constructed by the average building firm, but on the other hand, the average firm will make more money. There isn't another business in the country to-day that would tolerate the kind of competition that exists in the building field.

"The above, from THE BUILDERS' GUIDE, we believe expresses the opinions of all engaged in the building trades in so far as it refers to the cut-throat competition prevailing and the increased prosperity that would result with its elimination.

"A feasible, practicable plan has been

sought for by every Builders' Exchange in the country, but we know of none that has met with success.

"The size of the estimate for a building (errors and omissions excepted) submitted by the general contractor depends largely upon the old economic law of supply and demand, and his bids will fluctuate accordingly as his desire and need for work rises and falls, the percentage of profit added being correspondingly greater or less as the case may be. This is a legitimate practice and should not be altered.

"The range of the bids submitted by the general contractors is also influenced by a difference in overhead expenses, occasionally a more favorable market for materials not known to others, a greater adaptability to the character of the work entailed in erecting the particular structure and, we regret to state, the knowledge that he can induce one or more of his sub-contractors to reduce their bids from the original tender.

"The last-mentioned item is the one in need of correction and it has been said that it oftentimes represents the contractors' entire profit on the job. It certainly is an evil of which all, both the contractor and sub-contractor, complain most bitterly."

* * *

Would This Help?

IT has been thought that it might be possible to eventually prevent its continuance by having the sub-contractors file copies of their bids at the Exchange.

"These bids to be kept secret, under seal, and filed with the Builders' Exchange, in the keeping of its secretary, and to be opened upon request, after contract is awarded.

"The sub-bids would then be scheduled and the lowest reliable bidders in the various lines who had tendered their bids to the successful general contractor would then be awarded their contracts at the prices filed with the Exchange.

"It is the humble belief of the writer that a plan of this kind might solve the problem for the one reason, if for no other, that the amount of the lowest sub-bid is definitely established and can be obtained and the lowest bidder cannot be hoodwinked into believing that he must cut his figures to win the job.

The plan is very hazy, but can be elaborated and improved as necessity demands. We believe it merits a trial, at least, and further hope it may suggest criticism from which the effectual specific may be compounded."

And as good old Johnny Patterson used to say when he somersaulted into the sawdust ring: "Here we are again!"

A Chat on Lien Law.

BY the way, there is an interesting little talk in the Exchange Bulletin on the subject of "Mechanics' Liens," by John D. Carlile, counsel for the Exchange. It is so clear and concise an exposition of the law of Pennsylvania in its bearings upon the subject in hand that we are moved to quote it at some length:

"Mechanic or dealer in materials who seeks to maintain lien against any building upon which he has done work or furnished materials must be careful first to see that he has charged the operation or building with the materials and labor furnished, in other words, that his work has been done upon the credit of the operation and not upon any credit given to an individual, as such alone; he must also, secondly, determine whether the building upon which he is working is a 'new erection' or 'an alteration and addition.' In most cases, this is not difficult, and the question only arises when an old building is so altered that it is practically made new, then the claimant is put to the necessity of determining the nature of the change, because of the fact that liens for 'new erections' are given under one act, and in each instance the procedure necessary to maintain a lien is different.

* * *

Notice to be Given.

TO illustrate: If it is intended to hold the building upon which the work in the nature of an alteration is being done, notice of such an intention must be given to the owner before the completion of the work; this notice is not required, however, when the job is a 'new erection.'

The lien attaches in the case of a 'new erection' from the time when the building is commenced, that is, when the first excavation for foundations is made; but where the claim is to recover for 'alteration' the lien attaches from the date of its filing, so that there is a vast difference in the inception of the claim, and of its effect and value.

"Another notice of the intention to file a lien must always be given to the owner a certain length of time prior to its filing, and after the lien is filed in court a notice of that fact must also be given. These notices of an intention to file a claim must be given in the case of a 'new erection' within six months after the completion of the work, and in the case of an 'alteration and addition' within three months after its completion.

"These generally are the salient provisions of the lien law as it stands, and while, as has been said, the remedy is one purely statutory, yet the courts have almost uniformly been liberal in construing the law in favor of the mechanic.

The Objectionable Provision.

THERE is, however, a provision in the law as it now stands by which the general contractor may agree with the owner that no liens either by himself or any sub-contractor shall be filed. This agreement, when properly recorded or when brought to the actual notice of the parties interested, will prevent the filing of any lien, or will at least render it nugatory. Under this provision a practice has grown up by which in almost every case it has become usual to file such agreements of record, thus relegating the sub-contractor to his remedy against the contractor in person, which practice has resulted, in many cases, in debarring those who are the most vitally concerned, and who contribute in the largest degree to the building, by com-

elling them to resort for payment to the contractor alone, who may be irresponsible."

* * *

A Movement for Repeal.

THERE is a proposition pending in the Exchange to ask the next Legislature to repeal this objectionable provision, the effect of which movement, if successful, would be to make all buildings thereafter erected subject to mechanics' liens when properly filed.

The proposition is, as yet, in the tentative stage. In other words, while sentiment is being canvassed in its behalf it is understood that no action will be taken unless such action has the approval of a majority of the members of the Exchange.

EDITORIAL NOTES

The National Terra Cotta Society, in which O. W. Ketcham is an influential factor, has under way a carefully planned campaign to interest prospective builders in the beauty, utility and comparative economy of terra cotta as a medium for attractive store fronts.

* * *

The Legislation Committee of the Philadelphia Master Builders' Exchange reports that the Ordinance, making it obligatory upon the part of the city authorities to place and maintain red danger lights on sidewalk and street obstructions, has been submitted to Councils and is now in the Committee on Highways.

* * *

Owing to the fancy wage scales of the munition makers the labor question continues troublesome. At least one projected speculative operation that had proceeded as far as the cellars has been called off because of the impossibility of holding laborers in the face of the wages offered in and about Eddystone.

* * *

An investigation to determine the laws governing the strength and stiffness of mild steel when subjected to combined stresses at right angles to each other has just been completed by Albert J. Becker, of the Engineering Experiment Station, University of Illinois. The specimens tested were made of drawn steel tubes of uniform size and thickness. These tubes were subjected to an axial load, either tension or compression, and to internal pressure.

The results show that with changing relative values of the biaxial stresses the yield-point strength follows the maximum strain theory until the value of the shearing stress reaches the shearing

yield point, then the shearing stress controls according to the maximum shear theory. Thus there are two independent laws each dominant within proper limits instead of any single law as has heretofore been assumed.

The investigations of Mr. Becker are described in Bulletin No. 85 of the Illinois Engineering Experiment Station, W. F. M. Goss, Director, Urbana, Ill.

* * *

Rene Gruet, architect, 77 Rue Reaumur, Paris, France, is establishing an agency in Paris to represent American manufacturers of building materials and specialties for distribution throughout France and Belgium. After the war there will be unusual opportunities for all manner of building materials to be used in reconstruction and Mr. Gruet is desirous of hearing from parties who wish to establish selling connections.

* * *

Building material prices outside of the metal lists show few changes for the month so far. Paints and oils are gradually recovering from their recent decline. Dry colors are extremely high on account of the war embargo, but white lead, linseed oil and turpentine are moderate in price. The lumber list has weak spots. Gravel is higher, but sand is steady at the price set in the spring. Window glass still commands premiums above the official list price.

* * *

The United States Bureau of Standards, in conjunction with others interested in the problem, has undertaken an investigation of the integral method of waterproofing concrete. Letters have been sent to more than 800 architects,

engineers, contractors, etc., and the replies received are being tabulated by the bureau. The project for experimental concrete tanks along the river front of the city of Washington is an important feature of the investigation. The District Government has set aside a plot of ground for this purpose and plans have been completed for the construction of the tanks.

* * *

Kenneth Murchison, architect, 101 Park avenue, New York City, has been retained by the Jacksonville Terminal Company, Jacksonville, Fla., to prepare the plans and specifications for erection of a union terminal to cost approximately \$650,000. The projected structure will be three stories in height, 365x80 feet. Mt. Airy granite will be used for the construction. The new building will become a terminal for all railroads entering Jacksonville.

* * *

Long extensively used for street paving, creosoted wood blocks are being used more and more for flooring and runways in factories, warehouses, machine-shops and covered piers, hospitals and laundries. The material is mostly Southern yellow pine treated in great steel cylinders. Creosote oil is run into the cylinders and pressure is then applied to force it into the wood. The blocks are laid with the grain vertical. The joints or cracks between the blocks are then filled with hot paving pitch or asphalt. The cost averages about \$1.50 per square yard for the blocks alone and about \$2.40 per square yard for the completed floor.

Lehigh Portland Cement Company, Allentown, Pa., has increased its capital from \$1,200,000 to \$2,000,000.

* * *

The total value of the building permitted for at 148 cities of this country for July was \$114,400,000, a gain of 63.5 per cent. over July, 1915.

* * *

The National Lumber Manufacturers' Association report that yellow pine to the amount of 14,700,000,000 feet, valued at \$12.50 per thousand feet, was cut in the United States during 1915, leading the amount of other lumber out by more than 10,000,000,000 feet. The total for all lumber was 37,013,000,000 feet.

* * *

For the first two weeks this month the freight movement past ten chief division points on the Pennsylvania Railroad lines east, amounted to 438,001 cars, an increase of 34,032 cars over the same period last year.

* * *

Income tax revenue collected by the government this year aggregated \$124,937,252, to compare with \$80,201,758 the previous year, an increase of more than 55 per cent.

* * *

Professor Thomas Nolan, of the Department of Architecture, University of Pennsylvania, has just been appointed by the president of the American Institute of Architects to the chairmanship of a new Institute Committee on Building Materials and Methods of Construction. Working under and with Professor Nolan will be as many sub-committees as there are chapters of the institute in the United States. It is the intent of the institute to gradually extend the scope of the work of this committee to embrace co-operative constructive work with various engineering societies, and to collect, publish and distribute for the use of architectural profession throughout the United States important information concerning building materials or devices.

* * *

Keep plugging! Did you ever know a successful man who let up in his efforts just because he had a "good excuse"?

When others are discouraged, the successful man keeps his confidence. When others fall back in the face of difficulties, the successful man girds on his armor and presses forward. When others drift with the tide, the successful man puts on more steam and fights the harder.

"I have no fear," said General Grant, on the eve of a battle. "I'm thinking how afraid the other fellow is."

"When my competitors lose their nerve, then is my chance to fight the harder for the business that they let slip," said a great captain of industry.

Anyone can succeed—for a while—when times are propitious. Anyone can advance with the throng.

But to stand by the guns when others have fled, to go forward when others retreat, takes the stuff of which heroes—and successes—are made.

Don't quit, don't waver—

Keep plugging!—*Ohio State News.*

LIMIT ARCHITECTURE TO STREET FACADES

Designers Criticised for Ornamenting Only One Wall of City Buildings.

If the architecture of our cities was invariably viewed from the points selected by the designers of its various units when preparing their perspectives, there would be some degree of reason in the plan now generally pursued, although even a friendly critic would probably hold that there still remained something to be desired, says "The American Architect." But, as a matter of fact, a very large proportion of the buildings which constitute our urban architecture is viewed by three-quarters of our population, for the greater part of the daylight period, from the windows of office buildings, apartment houses, loft buildings or residences, which do not look out upon the principal facades of the surrounding structures.

Viewed broadly, it seems, therefore, little short of illogical to expend much artistic effort and considerable sums of money to decorate and improve but one wall. The roofs may and generally do present an array of water tanks, pent houses and skylights arranged and constructed to serve utilitarian purposes solely and without regard to form or appearance. Side, rear and court walls likewise are usually without architectural treatment, and in many instances are rendered even more crude and unfinished by contrast with a well-designed principal facade visible from the same viewpoint. Perhaps there was a time before the advent of the tall building when this manner of treatment was more or less justified by reason of the fact that seldom if ever were the roofs or sidewalls in evidence to any one but the workmen sent to repair or maintain them. At the present times, however, conditions have so totally changed that there no longer appears to be any excuse for the dilapidated or unfinished aspect of these prominent portions of the modern building.

Undoubtedly the question of cost enters into the problem, but, ignoring custom, there seems to be no good reason for neglecting the design of any portion of the building that is viewed as frequently and by as many people as are the roofs and sidewalks. A more consistent treatment would be to save some of the expense not infrequently lavished on entrance and other details of the principal facade and devote the money to the refinement of these various features of the building now generally neglected. In this work architects are manifestly in a position to ex-

ert a strong influence, and if a client has presented to him the fact that an elaborate principal facade with shabby roof structure and rear walls is an expression of bad taste; that the practice is as indefensible and blameworthy as is the perpetuation of numerous other shams for which he would under no circumstances take responsibility, the ultimate result will undoubtedly be a great improvement in the architectural appearance of our cities.

AMERICAN WAR MEMORIALS.

The "Architectural Review" (London) contains in a recent number an extended illustrated article on America's war memorials. It says that among the columnar monuments of recent date those by McKim, Mead & White—the Battle Monuments at West Point and the Prison Ship Monument in Brooklyn—should be studied as examples of refined taste and bold execution. Further:

"The Battle Monument at West Point is, we think, one of the very finest monuments of its kind erected in modern times," says the "Review." "The site itself is remarkably striking and the architects have taken the fullest advantage of it in the setting of the column.

"The mausoleum to General Grant, in New York, is another very striking war memorial in America. It follows the classical model of the mausoleum of Halicarnassus with certain modifications.

"The Maine monument is as regards composition not entirely successful. The extreme animation of the silhouette conveys nothing of that sense of repose which a monument should symbolize and the naval emblems (sea horses) and figures are too excitedly grouped. There is a lack of dignity in this monument that gives the impression that it is essentially a paper design. On the drawing board beautifully drawn and exquisitely rendered it could not fail to charm; but the designer did not achieve his purpose, having failed to give sufficient character to the executed mass.

"The Soldiers Monument in Brooklyn (J. H. Duncan, architect; F. W. MacMonnies, sculptor) is not a satisfactory composition, the disposition of the sculpture groups in relation to the architecture being unhappy in effect.

"Bartholdi's gigantic statue of 'Liberty'—its execution is masterly, but it owes its success partly to its advantageous site on Bedloe's Island at the entrance to New York Harbor.

"The motif of a triumphal arch has been used for many war memorials in the United States. The finest is the Washington Arch in Washington Square, by McKim, Mead & White. This elegant structure follows Chalgrin's Arc de Triomphe, though miniature in size when compared with the great Paris example. Its chief attraction consists in the noble proportion of its mass and in the extreme beauty of the detail."

Some big guns are smooth bores.—Ex.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Store (alt. and add.), 3040 and 3042 Germantown avenue. Architect, Wm. H. Wooters, 816 West Allegheny avenue, Philadelphia. Owner, J. F. Brown, care of architect. Brick, 3 stories, tile and marble work (heating and electric work reserved). Architect taking bids, due August 28th. John N. Gill & Co., Heed Building, Philadelphia, are figuring.

Stores and Apartments, 1304-1306 Columbia avenue, Philadelphia. Architect, George Monroe, 105 North Sixtieth street, Philadelphia. Owner, Mrs. Tillie K. Daut, care of architect. Brick, 3 stories, 32x59 feet, slag roof, steam heating, electric lighting, hardwood floors, tile work. Architect taking bids, due August 30. W. O. Springer, 1634 Latimer street, Philadelphia, is figuring.

Garage, 2312 to 2316 North Broad street, Philadelphia. Architects, Henon & Boyle, 10 South Eighteenth street, Philadelphia. Owner, F. W. Kroesser, 1432 Rush street, Philadelphia. Brick, 1 story, 55x178 feet, slag roof, steam heating, electric lighting. Architects taking bids, due August 30th. The following are figuring: Stacy Reeves & Sons, 2011 Market street; John McShain, 1610 North street; Harry Gill, Jr., 2515 Germantown avenue, and Frank Mark Contracting Co., 2821 North Twenty-first street, Philadelphia.

Parochial School, Belgrade and Westmoreland streets, Philadelphia. Architects, Ballinger & Perrot, 1700 Arch street, Philadelphia. Owners, R. C. Church of the Nativity, Monsignor J. P. Turner, on premises. Brick, stone and steel, fireproof, 4 stories, 125x170 feet, slag roof, steam heating, electric lighting, tile work. Architects taking revised bids. Melody & Keating, Bailey Building, Philadelphia, are figuring.

Factory Buildings (3), Twenty-fifth and Hunting Park avenue. Architects, Ballinger & Perrot, 1701 Arch street, Philadelphia. Owners, Edw. G. Budd Manufacturing Co., Twenty-fifth and Hunting Park avenue. Brick, steel and reinforced concrete, 5 stories, 75x330 feet, 1 story, 125x310 feet; 1 story, 85x300 feet, concrete, slag and wood roof, steam heating, electric lighting, fire doors, metal lath, waterproofing. Architects taking revised bids, due August 29th. The following are figuring: Irwin & Leighton, 126 North Twelfth street; Cramp & Co., Denckla Building; Warren, Moore & Co., Commercial Trust Building; H. E. Baton, Twelfth and Sansom streets; Haibach Const. Co., Twenty-sixth and Thompson streets; Turner Concrete Steel Co., 1713 Sansom street; F. W. Mark Const. Co., Finance Building; Barclay White Co., Perry Building; George A. Fuller Co., Widener Building; Fidelity Const. Co., Heed Building; E. F. Fonder, Land Title Building, all of Philadelphia; Leonard Const. Co., Stone & Webster Eng. Corp., both of New York City, and Samuel Austin Sons, Cleveland, Ohio.

Factory Buildings (2), Third and Allegheny avenue. Architects, A. J. Sauer & Co., 908 Chestnut street, Philadelphia. Owners, Bernstein Manufacturing Co., on premises. Brick, steel and concrete, 3 stories, 70x70 feet and 45x48 feet, slag roof, steam heating, electric lighting, metal sash. Plans in progress.

Store and Apartments (alts.), 126 South Ninth street, Philadelphia. Architects, A. J. Sauer & Co., 908 Chestnut street, Philadelphia. Owner, Ernest Jambor, on premises. Brick, 3 stories, consists of general interior alterations. Plans in progress.

Factory Building, Stenton avenue, Wayne Junction, Philadelphia. Architects, Morris & Erskine, 1428 Chestnut street, Philadelphia. Owners, Leeds & Northrup Co., 4901 Stenton avenue, Germantown. Reinforced concrete, brick and cut stone, 5 stories, 54x200 feet, hollow tile partitions, promenade tile, wood block, terrazzo and concrete floors, felt, asbestos and asphalt roof, safety treads, fire tower, steel doors, steel stairs, steel rolling partitions, copper work. Superintendent, Joseph E. Pennock, 2128 Land Title Building, Philadelphia, is taking sub-bids on all lines.

Theatre, southwest corner of Eighteenth and Market streets, \$500,000. Architects, The Hoffman Co., Finance Building, Philadelphia. Owners, Stanley Realty Co., Juniper street and Market street. Brick, terra cotta, concrete and steel, fireproof, 1 story, 152x176 feet, slag roof, mechanical heating system, electric lighting, tile and marble work, metal lath. Plans in progress.

Tank Supports, Boston and Emerald streets, Philadelphia. Architects, Stearns & Castor, Stephen Girard Building, Philadelphia. Owners, Firth & Foster Co., on premises. Reinforced concrete and steel. Architects taking bids, due August 28th. The Fidelity Construction Co., Heed Building, is figuring.

Machine Shop, 140 North Juniper street, Philadelphia. Architect, Wm. Lowenthal, 1208 Chestnut street, Philadelphia. Owner, P. J. Collins, on premises. Brick, 1 story, 18x100 feet, stone, terra cotta, cement and concrete work, slag roof, steam heating, electric lighting. Architect has received revised bids.

Convenience Station, Westmoreland Park, Philadelphia. Architect, Louis E. Marie, City Hall, Philadelphia. Owners, City of Philadelphia. Brick and plaster, slate roof, interior tile walls, heating, lighting and plumbing. Lowest bid submitted by Mitchell Bros., 2125 Race street, Philadelphia, \$3,986.

Convenience Station, Cornelius Park, Philadelphia. Architect, Louis E. Marie, City Hall. Owners, City of Philadelphia. Brick and concrete, 2 stories, slate roof, interior tile walls, heating, lighting and plumbing, also two pavilions, 1 wood and 1 brick, 1 story, slate roof. Lowest bid on convenience station submitted by James L. Connor, 1345 Arch street, Philadelphia, \$6,300. Lowest bid on rustic pavilion submitted by W. W. Anstine & Co., 1218 Filbert street, \$1,500. Lowest bid on refreshment pavilion submitted by W. W. Anstine & Co., \$800.

Club House (int. alts.), 1209 Walnut street, Philadelphia. Architect, Samuel D. Hawley, 2nd, Queen Lane Manor, Philadelphia. Owners, Philadelphia Athletic Club, on premises. Consists of interior alterations, new shower and rubbing room, tile work, marble work, plumbing and painting. Architect has received bids.

Residence (alt. and add.), St. Martins, Pa. Architect, Charles Barton Keen, 1218 Chestnut street. Owner, T. Charlton Henry, Thirty-third and Moreland avenue, Chestnut Hill. Consists of general alterations, interior and exterior, new porches (heating system, tile work and hardwood floors reserved). Architect taking bids, due August 31st. The following are figuring: Samuel Harting, 22 Harvey street; Thomas Seeds, Jr., 1207 Race street; John N. Gill & Co., Heed Building; Wm. J. Gruhler, 219 East High street; Jacob Myers & Sons Co., Witherspoon Building; A.

R. Raff Cont. Co., 1635 Thompson street, Philadelphia.

School (alt. and add.), Sixth and Tioga streets, Philadelphia. Architect, E. F. Durang & Co., Fifty-fourth and Cedar avenue, Philadelphia. Owners, St. Veronica's R. C. Church, care of Rev. J. J. Donnelly. Stone and brick, consists of general interior and exterior alterations and addition. Architects taking bids, due September 1. The following are figuring: Wm. McShane, 417 South Thirtieth street; Conneen Const. Co., Commercial Trust Building; Wm. R. Dougherty, 1610 Sansom street; Jacob Myers & Sons Co., Witherspoon Building; Monaghan & Losse, 3016 Chestnut street, and J. J. Murphy, 4034 Powelton avenue.

Church (alt. and add.), Park and Montgomery avenues, Philadelphia. Architects, Watson & Huckel, 1211 Walnut street, Philadelphia. Owners, Third Church of Christian Scientist, on premises. Stone, 1 story and basement, 50x60 feet, slate roof, vacuum vapor heating, electric lighting, also alterations to present building. Architects will take bids in about one week.

Residence and Garage (alt. and add.), 2109 Walnut street, Philadelphia. Architect, Chas. Barton Keen, Bailey Building, Philadelphia. Owner, Howard Reifsnnyder, 110 South Front street, Philadelphia. A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And therefore is
A goodly thing to try.

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

DRY ROT and WARPING STOPPED

ON THESE FLOORS TREATED WITH

SAUMS PRESERVATIVE

SECOND REGIMENT ARMORY, TRENTON, N. J.

In 1910 the floor boards of the Drill Hall were greatly warped and dry rot had started on the underside. The floor was treated on the surface with SAUMS PRESERVATIVE and the warping entirely eliminated. After six years use the surface is smooth and level, and recent tests show that there has been no increase in the dry rot.

This is another proof that "Saums Has Stood the Test of Time."

Furnished, Applied and Guaranteed for Five Years by

THE SAGENDORPH CO., Inc.

N. E. Cor. 24th and Walnut Streets, Philadelphia, Pa.

BARRETT TWENTY YEAR GUAR- ANTY BOND.

The new Barrett Specification dated May 1st, 1916, contains a twenty year guaranty bond which is issued by the U. S. Fidelity and Guaranty Company of Baltimore. In putting this new specification upon the market, the Barrett Company is giving architects, engineers and owners the benefit of their experience in laying Barrett Specification roofs properly. Where the work is properly done, a Barrett Specification roof will last twenty years without repairs. There are restrictions in the specification and where these are complied with, the guaranty will be given without charge on all Barrett Specification roofs of 50 squares or more in the United States and Canada in towns of 25,000 and over and

in smaller centres where the Barrett inspection service is available. It is also provided that the roof is to be laid by a roofing contractor satisfactory to the Barrett Company who will do the work in accordance with the Barrett Specification of May 1st, 1916. The Barrett Company will furnish lists of roofing contractors who have agreed to work with them under this new guaranty bond plan.

Prof. H. F. Moore has written an article on the Webb strength of I-beams and girders which appears in the March, 1916, issue of the "Journal of the Western Society of Engineers." He recites a number of tests and illustrates his article by illustrations from photographs and diagrammatical drawings. In discussion, Prof. Moore said that the results of the tests confirmed current practice in the design of I-beams and girders. Nevertheless, the article is one which will be interesting reading to many designers of steel.

WATERPROOF, CLEANABLE WHITEWASH.

One pound of glue is dissolved in 3½ pints of water. To this is subsequently added three ounces of bichromate of potash dissolved in half a pint of hot water. These two ingredients are thoroughly mixed, and enough whitening then added to secure the right consistency. The mixture is applied to walls or roofs in the usual manner, and dries rapidly, while the action of the sun upon the potash and glue serves to render it waterproof.

Such a whitewash is available for a variety of applications, both exterior and interior. It adheres firmly to slate, glass, metal, masonry, or plaster, care being taken, if on plaster, to rub it well in with the brush. It not only affords an excellent protection from the effects of the sun's rays in hot weather, but acts as an admirable waterproofing to walls exposed to driving rains. When desired, it can be cleaned with a hose and cold water, or washed with a sponge.

BUILDING STATE ROADS.

Fully six hundred miles of State and county roads are being constructed annually in the State of Washington in line with its good roads policy of being prepared to link up with the surrounding States on the transcontinental highways. Much of this road building is very expensive, some of the mountain highways costing \$5,000 a mile for the clearing alone, not including the grading. The maximum grade of all roads throughout the State has been fixed at 5 per cent., thereby making them not only usable for ordinary traffic, but practicable for heavy traffic as well. It is expected that the mileage this year will exceed that of last, which was approximately six hundred, built by the State and counties at an expenditure of more than \$9,000,000. The regular annual automobile license tax, collected by the State on a horsepower basis, approximates \$400,000 this year.

TEST CONCRETE BRIDGES.

The Federal Office of Public Roads has begun a series of tests to determine the amount of load that can be sustained by concrete bridges of the type used in all parts of the country to span culverts and small streams. An interesting test was made recently at the Arlington experimental farm of the Department of Agriculture. The platform of the bridge measured 16 feet wide and 32 feet long. It consisted of a solid slab of reinforced concrete 10 inches thick, and was supported by concrete abutments about four feet from the ground. The concrete slab was reinforced by three-quarter inch iron rods about eight inches apart extending across it. In the test hydraulic pressure was brought to bear on a point in the center of the platform. It was not until the pressure had amounted to 90,000 pounds that the concrete slab cracked. A pressure of 84,000 pounds was exerted until the center of the span had been depressed about eight inches, and yet the platform did not entirely give way.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 36

PHILADELPHIA
September 6, 1916

As The Editor Sees It

ACCORDING to statistics gathered by *The Automobile* there are over 3,000,000 automobiles in use in the United States to-day. Three States now have over 200,000 cars apiece—New York, Ohio and Illinois. Eleven States have each over 100,000 cars. Pennsylvania is credited with 189,082 machines. What have these figures to do with building? A whole lot. With operative and investment building at any rate. They serve notice on the man who is building to sell or rent that he is missing a trick if he fails to equip his operation with garage facilities. We have in mind as we write a builder who has a block of decidedly attractive \$5,000 houses on his hands, every one of which he tells us he could have sold with ease had this question of accommodation for the automobile not been overlooked.

The automobile has passed the fad stage of its development. It has become a necessity of modern living. Its price has gotten down to a figure at which it is within the reach of the class of people who buy and who rent operation houses. The wise builder of to-day figures on a private garage to every house with means of access thereto. The builder who overlooks the growth of the automobile misses one of the best of present-day selling arguments. This isn't mere hearsay. These here statistics quoted speak for themselves.

* * *

AN increase, during August, of more than a million dollars in building here in Philadelphia over the returns for July, go to show that there is no let-up in building activity so far as little old Philadelphia is concerned. The figures for the month cover 1,247 building operations for which 783 permits were issued. The total of expenditure was \$4,472,130 as opposed to \$3,101,385 for the preceding month. While the to-

tal of operations for the month shows a falling off as compared with August of 1915, the value of the operations registers an increase of \$500,000.

During the first eight months of this year 5,965 permits were issued for 10,863 operations that cost \$32,627,125. In the same months last year there were 6,623 permits granted for 12,797 operations, costing \$26,719,955.

Following is a summary of building work for August:

Character.	Est. Cost
Dwellings two story	\$1,429,500
Dwellings, three story	93,800
Dwellings, four story	12,200
Dwellings, frame	6,200
Stable	6,500
Manufactories	123,000
Workshops	63,600
Garages	166,860
Office buildings	1,800
Stores	978,445
Warehouses	813,800
Engine and boiler houses	22,400
Churches	159,000
Halls	11,500
Miscellaneous buildings	26,640
Additions	316,635
Miscellaneous work	13,910
Heaters	24,700
Fire-escapes	2,075
Signs	5,800
Alterations and repairs	186,755
Powerhouse	7,000

Totals\$4,472,120

* * *

ENGINEERING equipment runs into money in the case of big modern structures. How important it is that this equipment be "right" at the very outset is emphasized in an article by Douglas Sprague in the *New York Record and Guide*:

"The mechanical, the heating and sanitary equipment of a modern apartment

house or loft building is more frequently the consequence of salesmanship rather than the product of impartial and unbiased study on the part of a consulting engineer," writes Mr. Sprague.

"The responsible and reliable quantity in these propositions should be the engineer, and he should be directly, not indirectly, responsible to the owner or his representative.

"The question that should be settled first between these two should be whether the engineering equipment is to be designed for cheapness in installation or economy in operation. From the standpoint of successful modern building practice, it cannot be both. No owner ever purchased a cheap installation but that he paid the difference between it and a first-class installation in coal and repairs; on the other hand, no owner ever purchased a first-class installation but who invested his money in a proposition that kept the operating cost down and would do its part in assisting to make the investment upon the whole proposition a paying one.

"If the cost of installation is determined by other rather than those who pay the bills for operation, then repairs or coal cost are not to be considered as long as the tenants can be retained somehow.

"What difference does it make if the heating apparatus does produce a boiler shop effect in the early morning, or that the hot water arrives some time in the forenoon, or even if the elevator does do the shuttle act—the experts who designed the contrivance do not have to listen to that soulless knocking of the radiators, ride up on the elevator, or go without their morning bath. Neither does the owner, but he pays the bill directly or indirectly. Indirectly after that knocking becomes part of the tenant's system and he is one of the anvil chorus.

"When I speak of a first-class installation, I do not necessarily mean 'high priced.' In order to obtain a first-class installation it is not necessary to have the pipe covering recovered with Russia iron, the vent radiation and fan splinterized, or the low pressure returns and drips made of brass and flanged. These and their like are superfluous—they do not add to the material value of the plant or lengthen its life, do not increase its efficiency or economy, but do add to the first initial investment cost without the least vestige of earning or saving power.

"A first-class installation is one which will produce: First, the highest known efficiency in all its parts; second, produce the greatest known economy; third, at the lowest possible cost in installation produce first and second.

"To obtain these—'whom do you employ?'"

* * *

THE engineer should not only have the technical training, but should have as well a practical experience in designing and supervising installations of different kinds so that he is well acquainted with best known practice from both the professional and practical sides. This education and practice will make him independent of the manufacturer and contractor. It will so develop him that he will be able to serve with an eye single only to his client's interest.

"The selected engineer should be so broad in mind that he will always advise the client to the client's interest, so forgetful that his commissions are forgotten from the time of signing his contract to the time of letting, when his first payment becomes due. Broad enough in advice between public service, and an isolated plant without prejudice, and this same spirit should follow in all his decisions.

"There are men practicing the profession who are meeting these requirements, but, and I make this statement as I learned it from the contractor's standpoint—they are few. They consistently refuse to lower their standards in practice or terms of employment. I hold no brief for them, neither have I condemnation proceedings for the others—'Their works do follow them.'

"Besides being capable of giving the cost of installation and the cost of operation, the engineer should be capable and have the human equipment to design a layout in detail and specify the different mechanical demands of the building, including the power plant, heating, ventilation, electrical and sanitary work. All these are inter-related, of equal importance, and the proper working of one depends to a more or less extent upon the other.

"The engineer's work should be so finished that the question of extras on the part of the contractor is tabooed at the beginning. The contractor should be relieved of all guarantees covering results. Those upon manufactured parts of the assemblage and workmanship and material should be retained for a reasonable period.

* * *

SOME of the largest operators of buildings advise that 90 per cent. of the operating cost is confined to the basement and sub-basement. In the majority of instances, this is needlessly so, if ever true. It can be true if the engineer was the contractor, or a contractor who saves the commission which should be paid to the consulting engineer, or it may be true when the work is peddled from one engineer's office to another and at last given out at a cut rate figure, or it may be true when the engineer is selected from any other standpoint than that of ability and reliability.

"No two buildings should be treated alike. The fact that a certain installation is successful in the office building in a given location in Manhattan is the poorest kind of a guarantee that it will be profitable in Chicago, Winnipeg, or even on another site in New York City.

"The investor, or his representative, should he be agent or architect, would not purchase a suit of clothes from John Smith, the tailor, made after the measurements of some suit that fitted the wearer as Smith's clothes generally do. The individual needs of each building should be far greater than the common needs of the tailor's patient. The one can be cast aside without regard to investment, the other is a permanent investment and the cost of operation and upkeep should not be treated as lightly as the valet's bills. They generally are—and this is evidenced by the total of the maintenance and operation bills."

* * *

IT's an old saying that there is nothing new under the sun. New York has learned that even the question of zoning and building restrictions is not new, that it was, in fact, practiced in the days of the Dutch burgomasters.

The little trading post which was destined to become the greatest city in this part of the world was just beginning its wonderful expansion and rapidly outgrowing its original limits. There remained, however, within the town proper large available building sites which in the opinion of the city administration were not properly improved; so the City Council enacted the following ordinance, not dreaming, of course, that they were perhaps the first of the single taxers:

"Whereas, the Director General and

Council have long ago warned the community by proclamation to improve their lots on the Island of Manhatans, which formerly were measured out too large and great for building thereon, and, whereas, some people desire to build but cannot find a suitable place where they conveniently may erect a house;

"Therefore, the said Director General and Council have deemed it advisable to inform everybody for the last time that they must properly improve their lots, or, in default, the Director General and Council will give them to the persons who are willing to build in the City of New Amsterdam, as convenient places allowing the present proprietors such satisfaction as the Surveyors in their discretion may deem adequate. Let everybody be hereby warned and if anybody intends to build let him report to the Secretary; which done, proper orders concerning his lot shall be given."

And New Yorkers fancied that in the zoning idea they had dug up something really new!

* * *

CONTRACTING doesn't believe in the Standard Contract form for contracts to govern engineering construction.

"It has recently been contended that standard forms for contracts to govern engineering construction are desirable," says *Contracting*, "that they may reduce the contractor's risk, lower the cost, strengthen the spineless engineer, and safeguard the unscrupulous engineer from himself by preventing unfair demands on the contractor. Interesting if true!

"Carried out to their logical limit, standard forms for contracts are about as valuable as a handbook giving a complete course of civil engineering in six weeks, or a formula making every man his own engineer. An undigested plea for standard contract forms may, it is true, be inspired by altruistic feelings for the contractor and for the engineer, but it appears much more like an effort to relieve the engineer of his responsibilities and to deal out professional work by the yard or by the pound."

* * *

THE decision regarding the Mecca Building sign in New York City is of more importance to builders than is generally believed. Because the suit was based upon the height of an advertising sign the impression has prevailed in some quarters that the decision only affects the heights of electric signs. Such is not the fact. It was really a test case which fixed very positively the time in which a builder might begin his operation after filing plans under the regulations existing at that time. Because the old code apparently permitted

one year in which to begin construction it had become a general habit to construe that section as allowing the applicant one year to begin work under the regulations in force when the plans were filed, regardless of any subsequent changes.

Prospective builders regarded this as one of their vested rights. The Mecca Building sign case has changed all this and very radically, stating very positively that no building, regardless of the time of the filing of its plans, can be started unless it conforms in every detail to the regulations in effect on the day that actual building is commenced. In other words, a builder may file plans on Tuesday. On Wednesday some new regulation may go into effect, and, unless the building has actually been started before the new act becomes a law, it will be necessary to file new plans. Of course, this is an extreme case, but the court de-

cision fixes the rule that there is no vested right to build according to the original plan, if, in the interim, changes have been made to the building regulations.

At the present time signs may be erected to a height of eighty-five feet. When the Mecca sign plan was filed there was virtually no height limit. The Mecca sign, although more than eighty-five feet in height, was not then raised to its proposed height. Meanwhile the new sign regulation went into effect, and toward the end of the year the sign builders proceeded to increase its height. The sign builders held that they were entitled to go ahead in accordance with the old plans. The suit was brought to restrain them, and the recent decision held that they had no such right. It is an important thing for builders who have not started structures for which plans were filed several months ago to contemplate.

EDITORIAL NOTES

Shipments of lumber for the week by the Southern Pine Association amounted to 108,100,552 feet, and the remainder of orders on hand amount to 463,821,276 feet. The actual production is nearly 10 per cent. below normal, while shipments exceed normal production 5.56 per cent. and orders are being received at the rate of 7.15 per cent. above normal production.

Albert Engstrom, of Stockholm, a distinguished Swedish editor, now visiting the United States, says the thing that most attracted him on his arrival in New York was the skyscraper.

"You've made a new architecture over

here," he said. "It's true that you've never had a national art, but you certainly have a national architecture. The Woolworth Building, for instance, is one of the most beautiful structures I've seen anywhere, and the whole appearance of the city is far more striking than that of any European metropolis."

* * *

Architect Trumbauer, of this city, is in charge of \$500,000 alterations being made by Cornelius Vanderbilt in the old Vanderbilt mansion on Fifth avenue at 51st street, New York City.

* * *

Mayor Smit' announced recently that plans for the new convention hall and free library to be erected by the city from the \$42,000,000 general loan funds will be ready to be advertised for bids by October 15. Further contracts on the new high-speed transit system will be advertised about the same time, said the mayor.

These will be the first moves made toward actual construction by the Smith administration in the great program of improvements made possible by the loans authorized by the voters at the primary election May 16. It is hardly probable, however, that the contractors will be able to get down to real work until next spring.

* * *

Owners of land bordering on the Delaware river in the extreme southeastern section of the city announce that they had organized a corporation, sold the land to the corporation and are preparing to erect extensive industrial terminals on the site.

The organization is known as the Greenwich Terminal Company, and the sale of land involves nearly \$2,000,000. It is expected that a bond issue will be made shortly to provide for developing the terminal.

The site comprises 250 acres. It adjoins League Island, stretches a mile along the back channel boundary, extends from the river to Ninth street and has its northern limit at Jones lane. Part of the site has already been chosen by the Pennsylvania and the Baltimore and Ohio railroads for terminal yards.

On the remaining portion of the land the company plans the development of transportation and industrial facilities to cost millions of dollars and provide employment for 100,000 workers. A ferry service will be established with the New Jersey side of the river.

For several years the individual owners of the land have had men at work filling up the area to bring it up to city grade. The water front is now twelve feet above the former level, and bulkheads have been constructed.

Major D. S. B. Chew is president of the company. Members include Charles C. Harrison, Joseph A. Steinmetz, the Brown interests, Joseph A. Janney, Jr., the Delaware River Real Estate Company, Herman Hoopes, A. J. Toland, Charles F. Jenkins and Louis J. Kolb.

act of 1914, which permitted American owners of ships under foreign flags to obtain the American flag and register.

* * *

The 1916 automobile season closed August 1, with an estimated output by American manufacturers of about 1,200,000 motor cars, compared with slightly over 700,000 in the 1915 season, and about 570,000 in the 1914 season.

* * *

Investments of savings and other State banks and insurance companies alone in

railway securities in 1915 were in excess of \$2,500,000,000, according to a compilation by the bureau of railway news and statistics, Chicago. The 19,457 banks held in that year about \$1,265,000,000 in railway stocks and bonds, comprising 32.2 per cent. of their total investments in government, State, county, municipal, public service and other bonds of any description; these investments together, next to loans secured by real estate, collateral or otherwise, comprising by far the largest item in the assets behind these banks.

they've fought and fought till they're nearly broken down, when they've lost time with strikes that never will be paid for, when, in short, at last they reach the goal of a dollar a day more than they used to get that dollar does not pay either (a) for the increased necessities nor (b) for expected—no, demanded—luxuries.

Oh, why can't they see it? Echo answers. And what is the use of talking about it if it's going to go on anyhow? Well, that's different. There's a lot of use of talking about it.

Talking starts thinking and thinking finds out what's the matter and the remedy.

One Benjamin Franklin once upon a time printed a periodical which, as I understand, was largely the only thing in its field. It was Poor Richard's Almanac. It came out once a year. I don't know how many years he carried it along. It does not matter at all. With the exception of the Bible it was about the only reading matter a large body of Americans had.

And how it was read! How it must have been read. Over and over again those sayings of Poor Richard were repeated and dinned into ears that led to brains that had to think about them or else not think at all.

And what an effect it had! It's my belief that Poor Richard's sayings had a good deal to do with bringing up and training to common sense ways of living and thinking the people who later joined under the leadership of one G. Washington to make this great nation.

What a fortunate man Ben was. His stuff was not buried in the Sunday newspapers nor yet in the week-day issues; it wasn't lost in monthly or weekly magazines to be dug out and buried again in the Digests and Reviews that have come to try and save literature.

Old Ben had an audience that could listen to a lot of "platitudes" and take them in and profit thereby.

Some day a lot of builders may be awakened up as Franklin awoke the American Colonists.

It's all right to say "What's the use of talking?" Wages keep on climbing and costs keep on climbing. And a dollar to-day is worth less than fifty cents was—not a hundred years ago. And contractors go on working for—what? Profit? Well, not so very many of them.—Theodore Starrett, in "Architecture and Building."

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pippin that there is either something better on the market or your specialty isn't worth a kopeck noway.

Don't expect outsiders to give you a big rating on a one-inch space.

EMULATION AND WAGE SCALES

The labor question is a mighty interesting one these days. The war supply business has produced in certain lines of general industry a condition that once existed in the building line. I refer to a practice or policy of giving men anything they want in the way of wages. Of course, to-day this is due to the extraordinary demand for help caused by the rush of orders for war supplies.

A manufacturer in the Metropolitan district was talking about the difficulty of getting his men to work. It is not a case of telling a man to this or do that. It is, "Won't you do this?" "I'd like to get you to do that," and such diplomatic expressions. Even then the man is likely to go to work for some war supply concern at noon or next morning.

"I declare," said he, "I don't know what we are coming to. At the ——— Company they are paying men \$15.00 for twelve hours' work at night boring shrapnel shells, and all other work at corresponding rates." He went on to tell other interesting incidents, all more or less of the same nature.

The spirit of emulation seizes all working people in such times as these—seizes them with an extra powerful grip. Aside from the needs of the case, the increasing cost of the necessities of life and the increasing necessity that everybody, especially the working man, feels for the "higher things of life," like talking machines that reproduce the voices of grand opera singers, moving pictures that show the great stars like Mr. Chaplin—not Charlie Chaplin, you'll notice—I don't take liberties with celebrities like some folks do—great stars like Mr. Chaplin and Miss Pickford,—aside from all these things that it takes money to enjoy, the spirit of emulation makes every man who hears of their getting \$15.00 a day in So-an-so's factory want \$15.00 for his day's work, too.

Fifteen dollars a day is a lot of money for a man who does not have to keep up appearances, who can wear for work days khaki or jeans costing two dollars per suit instead of sixty to ninety dollars as the unhappy piker of a boss does (and the clothes not paid for at that).

If there's anybody reading this who rises

in wrath now and says that \$2.00 khaki clothes are not the proper garniture for a free born American citizen, I would answer, why not? Do you expect the man to spend all of his \$15.00 just the same as though it were \$2.00 or \$3.00 or \$4.00?

Yes you do. You expect him to get rid of the whole fifteen—or twenty-five if that were the amount of the day's earnings—just as fast as he got them.

Meanwhile a lot of farmers and a few hard heads among the workers wear two dollar clothes and get rich and the joke of it is they are not the ones that lead movements for these thundering high wages. They know too much.

Fifteen dollars a day make grand pay if you could only have a lot of laborers and foreigners to do the dirty work at the old low prices. If everybody gets a raise the raise is worthless.

There never was a more absurd thing, from a practical point of view than carpenters in New York City raising their wages to \$5.00 per day and then demanding that all the mill work that they handle shall be made up by men who get the same wages as they do. Thus they would destroy the value of their \$5.00; thus they start the undoing of their own work.

A little investigation will show that nowadays when publicity drags everything to the light of day almost as fast as it happens the high-waged people are beset by (a) either a precariousness or uncertainty of employment that brings or tends to bring their actual income nearer to the level of the lower-waged people, or (b) they are speeded up so that their higher pay is at the expense of shortened lives and breakdowns, which amount after all to the same things as (a). Another interesting thing is that those who are lower in the wage scale are fighting, fighting, fighting, always fighting upward toward the higher level.

And while they fight along it all comes out in the wash, as one might say, and the increased cost of the things these workers do or make is passed on to the people and back to the workers themselves, so that when

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Residence, City Line and Church Road, \$15,000. Architects, Seeburger & Rabenold, Pennsylvania Building. Owner, Mrs. Walter B. Scott, 2126 Ontario street. Stone, 2½ stories, 26x70 feet, slate roof, hot water heating, electric lighting, hardwood floors, tile work. Plans in progress.

Residences (200), Third, Fifth, Johnson and Bigler streets. Architect, private plans. Owner, Mark Haller, Third and Shunk streets. Brick, 2 stories, 15x50 feet each. Slag roofs, hot air heating, electric lighting. Owner is ready for sub-bids.

Residence, City Line and Church Road. Architects, Savery & Scheetz, Stephen Girard Building. Owner, Joseph Gilfillan, West End Trust Building. Brick, 2½ stories. Details not yet decided. Plans in progress.

Arsenal Building, Frankford, Philadelphia. Architect, private plans. Owners, United States Government, Lieutenant George Montgomery, Frankford Arsenal. 1 and 2 story basement and attic extension of fuse building, 204x102 feet, concrete and brick. One 1-story metal storehouse building, brick, 192x43 feet and one 1-story and basement extension of artillery ammunition storehouse, brick and concrete, 118x48 feet, slate roof, steel sash, Kalamein doors, ventilators, Composition, concrete and wood floors, fire escapes, tile work, concrete work. Lowest bid submitted \$162,775 by N. W. Anstine & Co., 1218 Filbert street. Other bids: \$168,022, Edward F. Fonder, Land Title Building; \$174,046, Thomas Reilly, 1616 Thompson street.

Store and Apartments (alts.), 240 and 242 South Eleventh street. Architect, Otto C. Wolf, Denckla Building. Owner, Tony Kayser, 238 South Eleventh street. Brick, 3 stories, 25x100 feet. Slag roof, steam heating, electric lighting, tile work, parquet floors. Architect taking revised bids due September 5th. The following are figuring: A. R. Raff Construction Co., 1635 Thompson street; F. W. Van Loon, Denckla Building; F. A. Havens & Co., 845 North Nineteenth street; H. C. Dahl, 231 South Eighth street; Thomas Little & Son, 1713 Moravian street; Charles Fisher, Mervine street and Erie avenue.

Office and Apartment Building, 1429 to 1433 Walnut street. Architect, Frederick Webber, Morris Building. Owner, Samuel L. Brumbaugh, 1431 Walnut street. Brick, stone and steel, 15 stories, 55x96 feet. Slag roof, steam heating, electric lighting, tile and marble work, metal lath, iron stairs, elevators. Architects will sublet all contracts.

Store and Apartments (alt. and add.), S. E. Cor. Broad and Poplar. Architect, Charles E. Oelschlager, Harrison Building. Owner's name withheld. Brick, 3 stories, 24x60 feet. Slag roof, steam heating, electric lighting, tile work. Revised plans in progress.

Store and Residence (alt. and add.), 240 Monroe street. Architect, private plans. Owner, Majestic Building and Loan Association, on premises. Brick, 2 stories. Slag roof, tile work. Owners have received bids.

Factory (alts.), Thirteenth and Callowhill streets. Architect, Frank E. Hahn, 1112 Chestnut street. Owner, National Metal Edge Box Co., on premises. Consists of interior alterations. Roof ventilators, metal

lath, plastering, painting (office partitions reserved.) Architect has received bids.

Garage, 108 Gowen avenue. Architect, George S. Idell, 34 South Sixteenth street. Owner, T. Y. Olsen, on premises. Stone, 1 story, 20x20 feet. Canvas roof (heating, plumbing and electric work reserved). Architect has received bids.

Engine Room and Offices (adds.), West Philadelphia Yards. Architect, William H. Cookman, Broad Street Station. Owners, Pennsylvania Railroad Company, Thirty-second and Powelton avenue. Brick, 1 and 2 stories, 50x12 feet. Slag roof, concrete floors, safety treads, ventilators. Owners taking bids due September 5th. F. B. Davis, 240 North Tenth street; F. A. Havens & Co., 845 North Nineteenth street; Bailey-Lush Co., 201 North Broad street, are figuring.

Ash Pits, Erie Avenue Yards. Engineer, S. T. Wagner, Reading Terminal. Owners, Philadelphia & Reading Railway Company, Reading Terminal. Concrete and steel. Owners taking bids due September 5th. F. A. Havens & Co., 845 North Nineteenth street, and A. L. Carhart, Hale Building, are figuring.

Store and Residence (alt. and add.), Eleventh and Moyamensing avenue. Architect, private plans. Owner, Joseph V. Smith, 2415 South Eleventh street. Brick, 2 stories. Electric lighting (plumbing and heating reserved). Owner has received bids.

Store and Offices, N. E. Cor. Fifth and Arch streets. Architect, W. C. Furber, 418 Walnut street. Owner, J. Clifton Buck, 429 Arch street. Brick, terra cotta and concrete, 33x33 feet. Slag roof, steam heating, electric lighting, composition floors, metal sash, fire doors, safety treads, sprinklers, damp-proofing, metal lath. Architect taking bids due September 5th. The following are figuring: Roydhouse-Arey Co., Fidelity Building; H. E. Baton, Twelfth and Sansom streets; F. L. Hoover & Sons, 1023 Cherry street, Abel Bottoms Sons Co., 3611 Walnut street.

Residence (alt. and add.), 1635 Spruce street, Philadelphia. Architects, Mills & Van Kirk, Harrison Building, Philadelphia. Owner, Joseph R. Wainwright, 505 Chestnut street, Philadelphia. Brick, 3 stories, addition 15x22 feet. Slag roof, wire lath, dumb waiter, damp-proofing, electric lighting, tile work. Revised plans in progress.

Clubhouse (int. alts.), 1209 Walnut street, Philadelphia. Architect, Samuel D. Hawley, 2nd, Queen Lane Manor, Philadelphia. Owner, Philadelphia Athletic Club, on premises. Consists of interior alterations, new shower and rubbing room, tile work, marble work, plumbing, and painting. Architect is subletting all contracts.

Clubhouse (remodeling), N. W. Cor. Thirteenth and Walnut streets. \$100,000. Architects, Arthur I. Meigs and George Howe, 205 South Juniper street. Owner, The Philadelphia Club, on premises. Brick and stone, 4 stories. Consists of general remodeling. Details not decided. Plans in progress.

Publishing Building (alt. and add.), 724 Sansom street. Architect, Addison H. Savery, Stephen Girard Building. Owners, Geo. T. Bisel & Co., on premises. Brick, 4 stories.

Slag roof, steam heating, electric lighting. Plans in progress.

Factory (alt. and add.), 1631 North Second street, Philadelphia. Architects, Heacock & Hokanson, Bailey Building, Philadelphia. Owner, Keystone Spinning Mills Co., on premises. Brick and concrete, 3 stories. Slag roof, steam heating, electric lighting. Plans completed. Architects will take bids in a few days.

School (add.), (2 wings), Eighth and Lehigh avenue. Architect, J. Horace Cook, Nineteenth above Chestnut street, Philadelphia. Owner, Board of Education, Nineteenth above Chestnut street. Brick and stone, 3 stories, 60x200 feet each. Composition roof, metal lath, concrete floors, roof ventilators (heating, plumbing and electric work, separate bids). Owners taking bids due September 7th. Cramp & Co., Denckla Building, and Henry L. Brown, 1714 Sansom street, are figuring.

"NO TABLETS," SAYS MAYOR.

There will be no tablet in memory of Caesar Rodney, a signer of the Declaration of Independence, erected in Independence Hall, Philadelphia.

This is the attitude of Mayor Smith, expressed when he vetoed an ordinance passed by Select Councils giving the Caesar Rodney Chapter, Daughters of the American Revolution, the right to erect such a tablet.

Sending his veto to Councils, the Mayor explained that Independence Hall should be preserved as near as possible in its original state and that the erection of tablets and monuments would serve to mar the historic edifice. "By granting permission to erect the Caesar Rodney tablet," said the Mayor, "a precedent would be established and other tablets would follow."

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

Lots of men don't advertise because they cherish an idea it's too expensive. As a matter of fact, it's the cheapest good investment a man can put his money in, as hundreds of successful men have learned,

Barrett Specification Roofs

Guaranteed
for
20
Years

No Upkeep Cost for 20 Years —Absolutely Guaranteed

Here are details of a plan to guarantee your roof for 20 years—at no extra cost.

It's a new feature of Barrett Service.

We know from an experience of over half a century that a Barrett Specification Roof, if properly laid by a good roofing contractor, will last at least 20 years. Scores of roofs of this type have lasted almost twice that period.

In order that purchasers may have the benefit of this experience we have arranged with one of the largest Surety Companies in America—the United States Fidelity & Guaranty Company of Baltimore—to issue, hereafter, a 20 Year Guaranty Bond on all Barrett Specification Roofs of 50 squares or more in all towns in the United States and Canada of 25,000 population and over—and in smaller places where our Inspection Service is available.

Our only requirements are that the roofing contractor shall be satisfactory to us and that the Specification dated May 1, 1916, shall be strictly followed.

All you have to do to secure the 20 Year Guaranty Bond is to give the

roofing contractors copies of The Barrett Specification of that date, and tell them to figure on that basis. From the buyer's standpoint the arrangement is practically ideal, for under the plan the owner is assured of having an inspector on the roof whose only interest is to make it as good as possible—for if it isn't right we alone are the loser.

Do not confuse this Surety Bond with the ordinary "Guarantee." It is something quite different. It is issued, not by an individual or a manufacturer, but by one of the largest and best known Surety Companies in the country and is a legal, workable document that has no loopholes.

When you give the roofing contractor a copy of The Barrett Specification of May 1, 1916, to figure on, you are ordering the very best roof it is possible to construct and one that takes the base rate of insurance. In addition you secure a 20 Year Surety Bond, guaranteeing freedom from upkeep cost for that period.

Be
sure your
next roof
carries this
20 year
Guaranty
Bond

If you are interested and want any further information, write our nearest office and the matter will have prompt and careful attention.

Store, 525 South Second street. Cost, \$400. Max Letman (O), on premises. H. Lovitz (C), 526 Fernan street. New bulks, alterations.

FIRE-PREVENTION PREPAREDNESS.

The protection of the home from fire is a duty too generally neglected. Thousands of dwellings, many of them palatial, burn every year. Dwellings have the least protection of any class of buildings; yet their burning entails the severest personal hardships, as most often they represent a large proportion of the family capital, or contain treasures which

money cannot replace. Scarcely can one find a town, village or community within commuting distance of New York without the embers of somebody's home. Not only is it saddening to view them, but the long continuance of ruins in a neighborhood is a distinct detriment to adjacent property. Anyone who is about to build a dwelling in city or suburbs should peruse a treatise which Prof. Ira H. Woolson has written in response to many requests, on the subject of the construction and fire-prevention of dwelling houses. The work is an exceptional one, from which the layman can acquire a liberal education in house construction and the professional a good idea of modern standards.

The proportion of dwellings totally destroyed after once catching fire is high, because most often they burn freely, and are remote from efficient fire-fighting apparatus. Yet, with little or no additional cost, but with more thought and care, even frame houses can be so constructed that they will resist or delay the spread of flames until they can somehow be extinguished. It is Prof. Woolson's assurance that no one feature of house construction will contribute more to its safety than fire-stops, and he urges that incombustible fire-stopping material be used wherever possible. The added cost will be slight. A well-built frame building, fully fire-stopped, is equal, in his opinion, to a masonry wall and interior wood construction, so far as pertains to resistance to an interior fire. But into every dwelling there should be incorporated three fundamental features, namely: (a) a proper protection of stairways and other vertical openings; (b) a second means of exit from upper stories; (c) a fire-resistive horizontal cut-off between the cellar or basement and the floor above, because the fires most dangerous to life start in the cellar, basement or first story.

Again, the three leading known causes of fire are defective chimneys and flues, sparks on roofs and the accidental ignition of highly inflammable oils, such as gasoline. Proper chimney construction is, therefore, the author warns, the one most important feature in reducing the chances of fire. To chimneys, flues, smokepipes and fireplaces he accordingly gives extended consideration.

It need not be said that the author prefers masonry to frame construction, and real fire-proof construction first of all; but he recog-

nizes the fact that few indeed are, or ever will be, the homes structurally incombustible, to say nothing of the contents, and that the greatest field of usefulness for the suggestions contained in the book is in connection with the vast number of unpretentious dwellings situated where there is but slight conformity under present conditions to the standards of safe construction. Some of the suggestions are suitable only for certain types of high-class buildings, but the majority are

applicable to private dwellings of all grades.

Professor Woolson, the author, is the consulting engineer to the National Board of Fire Underwriters, to whom the public is indebted for this free contribution to the campaign of fire-prevention preparedness. The pamphlet is strictly educational in character, entirely practical and doubtless will be the means of preventing the utter destruction of many homes.—“New York Real Estate Record.”

THE MUNICIPAL ART SOCIETY

The Municipal Art Society of New York was organized in 1892, that there might be established a meeting ground for citizens interested in the æsthetic welfare of the city. With this general purpose in view, the society has concerned itself with sites for monuments and fountains, with traffic problems and improvements of the city plan, with the city parks and the exterior decorations of the public buildings, and with mural decorations, especially in schools. It has also contributed directly and indirectly many thousand dollars toward the decoration of the city with appropriate works of art.

Though often confused with the Art Commission of the City of New York, the Municipal Art Society has no relation with the Commission other than that of friendly co-operation. The legislation creating the Commission of the City of New York was initiated by the Municipal Art Society and by it carried to a successful conclusion.

Since the organization of the society its work has varied from year to year, as opportunities have offered and needs for its aid have arisen. It has, for instance, carried on an active campaign against the abuse of outdoor advertising signs, and in connection with the National Highways Association, has co-operated with representatives in various cities for a more extended and organized opposition to this public affront in city and in country. Its committee has prepared the first of a series of pamphlets dealing with this matter for country-wide distribution. This seeks to direct public sentiment toward suitable legislation abating this public nuisance.

Another of the society's purposes has been to keep before the public the advantages of good design in all of the things that the city undertakes. With this in view, it has installed in the Lorillard Mansion, Bronx Park, a permanent exhibition of photographs of Municipal Art assembled from the Art Commission, the Bronx River Parkway Commission from the society's own collection, and from the work of architects who have carried out municipal projects. It has also installed in Horticultural Hall, in the New York Botanical Gardens, an exhibition of works of natural decoration: window boxes, roof gardens, trees, etc., in the City of New York.

The society has in preparation a municipal

art survey of New York City. This will plot upon a large map the existing monuments and other works of outdoor art. Later an actual survey of the city will be made as a basis for constructive suggestion and criticism in the apportionment of works of art, which may be offered to the city from time to time.

Since its organization, the society has held various exhibitions of works of municipal design, that the importance of these might be kept before the public. It has also contributed directly to the decoration of the city. One of its earliest accomplishments was the placing of the mural paintings by Mr. Edward Simmons in the court room of the Supreme Court in the Criminal Courts Building, Manhattan. Later, in collaboration with other societies, the “Hunt Memorial” was presented to the city. This is located on the east side of Central Park and commemorates Mr. Richard Morris Hunt, one of the city's most distinguished architects, and first president of the society. The improvement of Coney Island Park, Borough of Brooklyn, was another result of the society's earlier efforts.

From time to time the society has instituted competitions for the enrichment of the city by street fixtures, combining artistic design with the practical utility. As a result of these competitions, the handsome bronze electroliters in Longacre Square were secured. The design for these, together with the triangular street signs on the lamp-posts, also secured through the society's competitions, are the property of the city and can be multiplied indefinitely through its five boroughs. The society has also erected two Hero Tablets in the New Police Headquarters. These contain the names of the men of the New York Police force who have met death at the post of duty.

The society now offers annual prizes of fifty and twenty-five dollars, to be competed for in the Society of Beaux-Arts Architects. It also offers a trophy with medals to be competed for in the high school art classes. This trophy consists of a bronze medallion mounted upon an oak tablet. It is awarded to the school whose team of five pupils succeeds in scoring the highest number of points in open competition each school term.

Various other gifts have been made by, or through, the society. A number of these have

been directed toward the mural decoration of the city's public schools. Among the decorations thus secured may be noted the sculptured over-mantel executed by Miss Frances Grimes and placed in the foyer of the Washington Irving High School. This is a gift of an anonymous donor through the society. Through the munificence of Mrs. Edward H. Harriman, the decoration of the foyer of this school is being carried on by Mr. Barry Faulkner in fourteen large panels. The society has contributed directly to the decoration of the walls and ceiling of the main staircase.

For a number of years past, the society has held an annual exhibition in the galleries of the National Arts Club of works of municipal design and construction. It has also conducted elsewhere in the city a number of exhibitions devoted to the special objects of the organization, and calculated to arouse appreciation of good in existing works of art, and intelligent interest in the improvement of unfavorable conditions. Its own affairs and these other matters concerning the æsthetic welfare of the city it presents to its members in a quarterly illustrated bulletin.

In all of the matters thus outlined the society has sought to act as a body of professional and lay members bound together by a common interest in the city's welfare. At no time has this work been without effect, but of recent years it has become of significant value. At the present time much is being attempted in the city which calls for unusually intelligent handling along æsthetic lines. A general propaganda of preparedness has therefore been undertaken by the society, and is being maintained through all branches of its organization.

SOME MORE ADVERTISING “DONT'S.”

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little “ad” among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, “The Builders' Guide” is the right medium for your advertising and cannot fail to bring you profitable returns.

Read “The Guide.” Read it all through. Don't let a single item escape your notice. You'll be surprised what a lot of valuable information is crowded into its pages in the course of a year.

PHILADELPHIA
September 13, 1916

As The Editor Sees It

THE skyscraper has found a defender, and a right doughty and valiant defender, in the person of Mr. Arthur Brisbane, editor in extraordinary of Mr. William R. Hearst's *New York American*. Mr. Brisbane can see no wisdom in the proposition to limit the height of buildings. He calls the effort being made to impose restrictions upon the number of stories a man may build into the air "foolish," "narrow-minded," "short-sighted."

Mr. Brisbane quotes a letter from Mr. Hearst in which that far-visioned gentleman remarks:

NEW YORK, in former times, looked like any other city, without that distinguishing skyline which has come to be the admiration of artists, of educated and travelled people throughout the world.

Many trying to prevent this natural and beautiful development of American architecture belong mainly to the conservative element—conservative because they have not the imagination to be anything else. They do not believe in anything but what has previously existed. They think that anything different is wrong because it is different.

"The distinctive American architecture was developed in the enormously tall building of to-day.

"Every great age has had its distinctive architecture. It expressed the sentiment and the conditions of its age. This age of ours is a great age, and the business conditions, the mechanical conditions and the sentiments and requirements of our period should be expressed in our architecture.

"Many peoples previously have recognized the impressiveness of great height. The Egyptians labored for years to erect the Pyramids. The Middle Ages expressed their ideas in the lofty spires of the Gothic cathedrals.

"It has remained for this age to combine utilitarian requirements and mechanical developments in the high office building. Only now is it possible to erect a monument which is a profitable monument.

"Only now can we erect the structure which has been the dream of ages and make it self-supporting financially.

"Will you please oblige me personally by fighting continually to preserve the opportunity for American architecture to develop in this distinctive and beautiful form?"

* * *

BRISBANE goes back to the cave man for the text of his editorial defense of the skyscraper. "Just as surely," says Brisbane, "as humanity once lived in that cave under the rock ledge, just so surely will human beings one day live in palaces thousands of feet high." And again, "Houses that man will build in the future will be as high above the dwellings of to-day as the modern skyscraper is high above the Bushman's hovel."

According to Brisbane our descendants "will see man with his flying machine directing his flight to the spot that belongs to him on the sunny side of some steel palace a mile or two in height." The man who says that this is ridiculous, utterly impossible, "simply lacks imagination."

"Man is a building animal. His history is a wonderfully interesting history of building, of the struggle against the power of gravitation that draws everything back to the earth, and of the ambition in man that overcomes all limitations.

"The ancients built, and at the corner of the building they buried one or more human beings especially slaughtered for the purpose to placate evil spirits and make the building stand.

"Man to-day puts at the corners of his building piers of concrete, actually creating the rock upon which his house will rest, or he sinks great steel caissons, upon which structures of steel can float in the ooze and mud.

"The building based formerly on murder is now based on exact science—wonderful progress.

"The Egyptians built their Pyramids, and at one of these heavy structures one hundred thousand slaves labored under the lash for a quarter of a century. To-day a contractor will build you a building twice as high, finish it in six months if you demand it, oppress no man in the building, rivet his steel beams with the power of compressed air, and pay the man who holds the "air gun" five dollars a day.

"There is progress, from stone and slavery to steel and freedom."

* * *

AT Rome you see the wonderful dome of St. Peter's, the roof of Michael Angelo's genius. The stones of that dome, rising gradually, leaning toward each other, were so neatly fitted and scientifically calculated that the great edifice rose to its finishing surely and steadily. But much experimenting was back of that.

"You may see another dome in Italy, another structure where stones come together, leaning toward each other form a rounded top. And this is the history of THAT dome. They knew no way of building a dome so that the stones in the running circle should not fall in. When they reached the top and touched it was simple for then they held each other.

"In this other ancient dome, the inside of the church and the inside of the dome were filled with earth. In the earth were scattered small silver and copper coins. As the dome went higher the

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

earth was piled higher to hold the stones and keep them from falling. Finally the stones touched at the top and the building was secure. Then the people were told to go in, dig out the earth and keep for themselves the money that they found. There was a building based on knowledge of human nature."

* * *

TO-DAY all building is scientific. If you want a steel structure to go a mile into the air, write a note to Judge Gary of the United States Steel Corporation or to President Farrell. Each will refer you to the genius of modern palace building, Joshua A. Hatfield, head of the American Bridge Company.

"Mr. Hatfield will put his engineers to work. They will figure to a pound the steel needed to carry the weight, the strength of wind pressure, the dangers of vibration and swing. The building, no matter how big you want it, will be made in parts like a gigantic basket of steel, perhaps hundreds of miles away from the place where it is to stand. It will be created complete in one of the Hatfield laboratories, put on the cars and your structural steel men with their 'air guns' will put it together. And every piece will fit. No more experimenting, all science.

"Everything on this earth, except what nature gave us in the crude state, is simply nature PLUS HUMAN THOUGHT.

"And this is proved by the modern steel palace. Every great building that you see standing was once absolutely complete in the brain of such a man as Hatfield, or one of his engineers. The mere building is the least part of it. The whole thing comes complete from the brain of the mechanical scientist, as in ancient mythology the God came complete from the forehead of another god."

* * *

TO limit man's building power, 'concludes Brisbane,' is like putting a straightjacket upon genius, or an iron band around the head of a half grown child.

"You can imagine what would have happened if those cliff dwellers had decided to limit the size of the human head. They would have put a tight band of a certain size around each head, and said, 'Your head must grow no bigger.' The ancient Gauls did something of that kind. But they put their band of bronze around the waist of the young warrior when he reached his full growth and said to him, 'If you let yourself get fat, unfit for war, that band of bronze will cut into you and you will be sorry.' The Gauls knew enough not to put their band around the forehead of the warrior.

"Modern Americans should know

enough not to put any band of limitation upon the genius of the American builder.

* * *

THIS is an interesting view of a subject that has been engaging popular attention, in New York City at least, for some years. The chief objections to the skyscraper have been two—first, that by centralizing, as it were, an immense quantity of renting space it has sapped whole blocks on every side, thus depreciating and unsettling established values and, second, that in shutting off, to a considerable extent, the light and air from the smaller surrounding buildings, it has amounted to a serious infringement on the rights of the owners and occupants of these buildings. It will be noticed that neither Mr. Brisbane nor Mr. Hearst approach the subject from that angle. Their point of view is that the proposed limitation amounts to a foolish embargo on the genius of the architect and builder.

The Guide owns to a certain curiosity to learn in just what light the architect of to-day is inclined to view the Bris-

bane flight into airy-altitudinously airy-prophecy.

Do you agree with the Brisbane view or take issue with it and, in either case, for what reasons? The material is here for an interesting little symposium if our architectural readers will snatch the time to write an opinion or two. What is *your* view, Mr. Architect?

* * *

IN last week's "Guide" in an editorial chapter on the importance of the individual garage as a necessary feature of the investment dwelling I was made to say "*These here statistics quoted speak for themselves.*"

I did not write it that way of course. What I did write was that "the statistics here quoted speak for themselves." The fellow who pounds my copy into type on the keyboard of his type setting machine did the rest. May I tender an apology to those of my readers whose intellectual sensibilities were jarred more or less by this slip of the type?

Thank you and here's hoping it may not occur again.

EDITORIAL NOTES

Contracts amounting to \$491,310 were awarded for new buildings and additions to the public schools by the property committee of the Philadelphia Board of Education last week. Contracts for construction of an annex to the Northeast High School was given to Thomas Reilly at a cost for the building alone of \$332,815. With the heating, ventilation, electrical fixtures and plumbing the structure will cost \$447,852.

Contracts also were given out for heating the Holmes School, Fifty-fifth and Chestnut streets, at \$29,940, for putting domestic science equipment in the Hawthorne, Longfellow, Mitchell and Hay buildings, and for paving and grading at the Lowell, Stowe, Sharswood and Poe schools.

* * *

Robert Lee Dunn, manager of the All-Americas Association, which has a membership of more than six hundred large American firms, declares that the business done by the United States with Mexico has substantially increased the last month. The expansion is attributed by him to the lifting of the embargo by the President.

Mr. Dunn says that the resumption of the oil fields which sell oil to the British Government has brought about a rush of import orders and predicts that exports from the United States to Mex-

ico will total one-third of our business with South America this year.

* * *

Joseph E. Widener is having his house and gallery at Elkins Park, near Philadelphia, renovated for the installation of two Denatelle sculptures recently purchased by him from P. W. French & Co. The bust of St. John and the full-length figure of David were both formerly in the possession of the Martelli family of Florence, and it is said that the Italian Government permitted the works to leave the country only in consideration of the gift to the Bargelle of a third example of Denatelle, a standing figure of St. John. The two works bought by Mr. Widener have long been desired by collectors, including Mr. Morgan and the founder of the Widener collection.

* * *

The Federal Forest Products laboratory at Madison, which did much of the technical investigation preliminary to the formulation of the density rules for southern pine, for the determination of relative strength values of various grades of lumber, and which is now working on the same tests for Douglas fir, has begun another series of tests for Wisconsin home lumber, hemlock. The laboratory is testing a large number of joists and large stringers, given a grading by the manufacturers according to their usual custom before being sent to the

laboratory for technical tests. The data secured by these tests will furnish a basis for recommending proper fibre stresses to be used with hemlock timbers.—*Mississippi Valley Lumberman*.

* * *

Charles M. Schwab, Carleton Schwab Wagner, his nephew, and Sam D. C. Rebman are reported to have bought from Thomas J. Prices and William G. Pursel the Danville Structural Steel Company for about \$300,000. The sale also includes, besides the iron mill, all other real estate of the company.

* * *

Raw gypsum from Nova Scotia for this market is calcined at the J. B. King & Co. mills at New Brighton, the Higginson plaster works at Newburgh and at works in Brooklyn and Chester, Pa. There are a total of sixty-nine manufacturing plants in the country. The average price of raw and calcined gypsum decreased 9 cents a ton in 1915. Six plants manufacture Keene's cement, and twelve make gypsum block, tile and plaster board.

* * *

Charles F. H. Johnson of the Passaic Board of Trade has acquired for the Brighton Mills, cotton fabric manufacturers, a tract of three hundred acres at Allwood, N. J., near Passaic, on which the owners plan the erection of a model village for the accommodation of the eleven hundred employees of the mill. No details regarding this project could be learned, although it was said that the village will include not only about one hundred and twenty cottages, but also a library, hospital and schoolhouse, to be maintained by the company.

* * *

Compensation agreements, involving a total of \$1,300,000, for five hundred and ninety-two deaths, caused by industrial accidents, have been arranged by the Pennsylvania Workmen's Compensation Board since January 1st, according to announcement by Chairman Harry A. Mackey.

* * *

In addition to death agreements, the amount of compensation paid by employers to workmen for disability amounted to \$450,000 up to August 1. An estimated total of thirty thousand injuries were reported and in virtually every case there was amicable settlement.

The close of the present year, the first in which the compensation act has been in effect, will bring the total recorded industrial accidents in the state to one hundred thousand, according to the board's estimates. This number will exceed the 1915 total by forty thousand, an increase due, states Chairman Mackey, to the fact that only about one-third of

the accidents were reported prior to the enforcement of the new act.

Commissioner of Labor John Price Jackson said yesterday that all of the cases before the board have been settled without friction between employer and employe, without law suits and their attendant high costs for litigants, and without any unnecessary delays.

BUILDING STATISTICS.

Comparative statistics of building and engineering operations in New England, New York, New Jersey, Pennsylvania, Maryland, Delaware, District of Columbia, Virginia, Ohio, West Virginia, Illinois, Indiana, Iowa, Wisconsin, Michigan, Minnesota, North and South Dakota and portions of Missouri and eastern Kansas, as compiled by the F. W. Dodge Company:

Contracts awarded January 1 to July 1:

1916.....	\$596,583,586
1915.....	413,532,600
1914.....	382,532,000
1913.....	472,372,000
1912.....	406,011,000
1911.....	416,227,813
1910.....	454,145,798

Comparative statistics of building and engineering operations in New York State and northern New Jersey, as compiled by the F. W. Dodge Company:

Contracts awarded January 1 to July 1:

1916.....	\$74,922,500
1915.....	72,558,000
1914.....	65,926,000
1913.....	158,017,500
1912.....	122,328,000
1911.....	129,784,000
1910.....	144,918,000

BUILDING EXPOSITION IN PARIS.

"The Reconstructed City" is the name of the world's exposition being held in Paris, France, which began May 15, to continue for four months. "The Reconstructed City" is a French national exposition to teach, even at this early date, how to rebuild the war-wrecked portions of northern France, when the war is ended. That the French Government is already planning on an entire reconstruction of the cities destroyed by the movements of armies back and forth across the northern provinces is evidence of foresight of an unusual type.

The exposition is in several sections, devoted to road-building, city planning, city residence construction, city industrial building, and rural work. In some cases the city planning department will work for an entire reconstruction on entirely new lines of the cities which have been wrecked by bombardment. In other cases only building construction along the old streets will be required. The road work will be important also, for shells have raised havoc with the famous highways of northern France. Ruined farms will be no small part of the problem of reconstruction.

TWO DECISIONS ON BUILDING CONTRACTS.

Two recent court decisions relate to contracts.

The United States Circuit Court of Appeals ruled in the case of the Equitable Surety Company vs. the Board of Commissioners that if a surety company signs a contractor's bond after receiving a draft of the contract providing that advances shall be made only as work progresses, the owner, having made advances contrary to the contract on which the bond is issued, cannot recover against the surety.

In the suit of C. E. Gates & Co. vs. the National Fair and Exp. Association the New York Supreme Court decided that labor and material not disapproved by the owner after having been expressly brought to his attention shall be regarded as consented to.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

The prosperous, the great, the wise,
You may have noticed, advertise!

BE PROGRESSIVE.

The best is the cheapest on both ends and in the center. Improvement does not impose a tax, as efficiency pays for itself. The penny scrimper cannot possibly hold out against as much as the gloomy, ugly, and unobliging progress. The best equipped shop never asks establishment. Be progressive.

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

No one suffers from a mean disposition like the fellow who has one.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 8, 1916.—Sealed proposals will be opened in this office at 3 P. M., October 20, 1916, for the construction complete of the United States post office at Bayonne, N. J. Plans and specifications may be obtained from the custodian of site at Bayonne, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 7, 1916.—Sealed proposals will be opened in this office at 3 P. M., October 19, 1916, for the construction of the United States post office at Du Bois, Pa. Drawings and specifications may be obtained from the custodian of the site at Du Bois, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

VOLUME XXXI
Number 38

PHILADELPHIA
September 20, 1916

As The Editor Sees It

THERE is no gainsaying the fact that a picturesque charm is lent to a certain type of country house by the use of the wooden shingle—a charm unattainable in any other medium. Some of the most attractive country houses, architecturally, owe much of their quaint “home-iness” to the weathered charm of broad and skilfully-placed expanses of shingled surfaces. The shingle, too, takes a variety of delightful tints in stain, that, mellowing under the influence of the elements, beget an effect of rare and indescribable beauty. It is because of the uncanny charm of the shingle as a passport to the picturesque that we have viewed with something akin to unfeigned regret the rising chorus of objection to it as a material highly inflammable and dangerous. Mr. Edward Rschle Hardy, discussing “The Shingle Roof” in *Architecture and Building* remarks:

“Fire Prevention, like most other reforms, is apt to have the emphasis placed now on this feature and now on that. Up to about the first of August, this year, owing to the fires at Augusta, Ga., Paris, Tex., and Nashville, Tenn., emphasis has been placed on the shingle roof hazard. The explosion at Black Tom Island will for a while concentrate emphasis on that phase of the subject and we hear very much about explosion risk. But the shingle roof will remain as a more lasting topic, due to the fact that it is so general a roof cover. When we can trace a very large proportion of the loss in a given conflagration to a certain factor like this it is perhaps just as well to recognize it and to see what can be done to lessen the danger from that service. One bit of testimony from the Mayor of Paris, Texas, is in point:

“I saw numbers of homes take fire and all without exception took fire in the roof. There never was a moment when the fire companies could control the fire. Buildings with noncombustible roofs

stood much longer than others, and even in the path of the fire some buildings which were frame with noncombustible roofs did not burn. There were three such buildings, perhaps others. Some brick buildings with noncombustible roofs were not a total loss due to the fact that a minimum of woodwork was used and to the further fact that wire glass windows had been installed.”

* * *

NEEDLESS to say,” continues Mr. Hardy, “the shingle roof represents an important business proposition, the money invested in the lumber business devoted to the shingle being considerable. As a matter of fact when emphasis began to be placed upon the danger of the shingle roof, very rightly the people who had an interest—and let us state frankly a legitimate interest—in the shingle as a commercial product began to be heard from. Now it is a hopeful sign that what they have to say in behalf of the shingle roof is not to decry the danger or to make the claim, for instance, that it is grossly exaggerated, but they frankly recognize it themselves and ask for co-operation in lessening the risk. Indeed, they seem to have gone beyond this mere matter of a plea and have instituted tests for the purpose of discovering certain retardants which if applied to the shingle roof will make it of less hazard than it is at the present time. Their conclusion is a very sane one and would indicate that if anything helpful is to be done in the matter their attitude at least is right, even though one may not sympathize with the retention of the shingle roof, although protected by means of some compound. Having quoted adversely to the cause from the Paris, Texas, fire, the shingle roof people should be allowed to state their own conclusion in regard to what they are doing. They do so in this paragraph:

“The conclusions so far reached indicate that several compounds are now available which, if properly applied to wooden shingles, will give a shingle roof a very high degree of fire-resistance. These same compounds at the present time have every guarantee of permanence, so far as this can be determined from a chemical investigation. They are insoluble in water and give a roof a pleasing appearance. For interior work, or for such places where direct weathering is of secondary importance, a very considerable number of compounds can be recommended, ranging from good mineral paints to more expensive materials. The strongest emphasis should be placed on the statement already made, that these results must be regarded as purely preliminary and that it will be absolutely essential to carry out some of the plans suggested before definite recommendations can be made as to the widely extended practical application of one or more of the substances investigated.”

* * *

IN the pages of the *New York Sun*, now under the control of Frank A. Munsey, there appeared recently a smartly-phrased article under the title “The Flavor of Cities.”

“The analyst of the charms of cities will first take into consideration their relation to the sea,” says the writer.

“It is true there are cities of peculiar attractiveness that are not seaports—Vienna and Paris, for example. But such cities are few and have important compensatory features, the gay life of national capitals or histories that confer upon them an unconquerable prestige. The seaports have an advantage that it is difficult to overcome. They are on the great main travelled highway of the world, they share its magnificent traffic and are visited by men of all races,

PRINTS**

creeds, tastes and codes, esthetic philosophic and moral. These variegated creatures bring and carry away all the goods, merchandise, costly stuffs and golden dross of the globe; the ebb and flow of this life, as sure as the ebb and flow of the ocean tides in the harbor, creates a city cosmopolitan, unprejudiced, picturesque.

"This is felt at once when the stranger sets foot in New York, San Francisco, New Orleans, or Charleston, South Carolina.

"In the case of New York there is always a profound doubt shadowing every vista. Is this a cosmopolis? Is it a chrysalis?

"Of course there is no such sense of tremendous heterogeneity about other cities of North America. San Francisco is as brilliant and enchanting as when first viewed, on a February morning in 1909, while sunshine poured upon its white new buildings and green grass made lovely every remaining scar. It has the misfortune to be provincial in a single respect—it fancies that culturally it is independent of the rest of earth. Now, even Boston knows better than that.

"The charms of New Orleans and Charleston are not intellectual. But then, who would wish them to be? They are offsets to Boston and San Francisco, which are our bright, advanced city children, although one worships simple studious delights and the other prefers the flashing frenzy of Parisian poets and decadents. The air of precocity invests both.

"Beside these coast towns how tame and commonplace appear the inland places! And beside New York how limited the personalities of other cities of the seaboard!"

* * *

NOT a word, you will notice, about Philadelphia, which has more real, distinctive flavor than any three of the cities named rolled in one. But then that is peculiarly a New York trait—that little trick of seeming to forget that Philadelphia has a place on the map or of passing it over to find mention for smaller and less distinctive and vastly less important centers of population. New York newspaper men regard that sort of thing as clever. Be pleased to observe also the delicate restraint in the sentence: "and beside New York how limited the personalities of other cities of the seaboard!"

* * *

WHEN the records of building operations for the year 1916 shall have been compiled for the country at large, it will be found that there has been a striking demand for

residences and that an enormous amount of building of that character has been done. This is indicated by reports from various parts of the country, says *The American Contractor*.

It has perhaps not been the main branch of construction. Factory building has been conspicuous. Work has been active in all departments. But if the achievements of the season could be visualized, the accretions and the improvements in residences would be readily noted, and would present an emphatic exhibit, as compared with the progress that had been scored in preceding years.

It has been an uplift movement, a trend toward better housing. The activities of the nation by way of domestic acquisitions, have been, as revealed in the public prints, amazingly toward automobiles, the increase in the number of which is nothing short of phenomenal. But the pleasure car and the motortruck have not had the stage of action completely to themselves, as persistently and rightfully as they have held the spotlight. The million new automobiles, which it is estimated will be purchased this year, may cost \$600,000,000 or more. A like, or greater amount, will perhaps be invested in new and improved dwellings.

Just as the rural districts are absorbing the greater percentage of the machines, so, too, the rural districts are indulging actively in the pleasant diversion of home renewals.

The agriculturist who buys a car gets into the statistics, for they are statewide; but the farmer who builds a handsome new home misses the public record, for the building permits are principally a matter of municipalities.

If by residence there is meant to be included, in addition to the detached house, the apartment building and the flat, the activities have been so palpable as to be self-evident. In many cities the housing operations have been principally in the direction of the multiform structure, the tenement, the flat or the apartment. In New York City apartment house construction has this season made distinctive gains. In Chicago the building of new flat structures has amounted almost to a craze. While Philadelphia has been busy on all kinds of housing problems.

But the work to which special reference is made here is to the detached dwelling, the one-unit home, the necessity of a generation ago, the luxury of to-day. They are not being erected notably in the congested urban districts, but in the suburbs and on the hillsides and in the valleys throughout the land. And this activity indicates clearly an improvement in the material resources of the builders; that and a number of other things.

And among the other things that it denotes is the widening prospect for the architect, for the builder and for the material man. Each completed residence may be a thing of the past, but it is more than that. It is a new standard, a new measure, a new incentive to others. It is the pioneer to be lost a few years hence in the maze of the followers. But even that will not mean the seeming slackening. For a new set of pioneers will launch forth next year and the year after, and they in turn will have their multitudinous followers. The architectural seed is planted one year. A profitable harvest comes a year later, still more generous harvests in the years to come.

* * *

MR. HAROLD DONALDSON EBERLEIN, who is regarded, in some sense, an authority, because of his familiarity with the subject, claims that to the Dutch Colonial House we owe that now fixed American institution the front porch.

"The Dutch Colonial House," says Mr. Eberlein, "sixteen hundred and thirteen to eighteen hundred and twenty, it at once a mystery and a paradox. It is a mystery because it seems to defy the law of physics about two bodies occupying the same space at the same time. It is a paradox because, despite its apparent simplicity, it is most complex in its texture and varied in its modes and expression.

"To the Dutch Colonial House may probably be attributed the origin of that essentially American institution, the porch, or at least one form of the porch as we now have it. The porch has been evolved and developed in response to a distinct and manifest need in our mode of life imposed by climatic conditions. It falls in with our habits bred of love of outdoors; our seasons invite, nay even, at times, compel its use. True, the porch has its prototype in certain architectural features found in England and on the Continent (especially in some of the Southern countries), but, as we now have it, it is a peculiarly national affair, and its evolution has been due to American ingenuity in an effort to meet the demands of local requirements. The earliest American houses, from New England to the Southern Colonies, faithful to prevailing precedent and tradition, had no porches—porches, that is, as we ordinarily understand the term. It was only as our domestic architecture developed along lines marked out and prompted by peculiarly American conditions and needs that precedents were forsaken, adaptations made, and porches appeared, at first in a rudimentary and tentative form and then finally, after the lapse of years, reached the full fruition of their growth

in the form familiar to us. That growth varied widely in the course it followed, according to the several sections of the country and consequent diverse requirements and preferences, but one form at least may be traced to the growth of plans in the houses of the Dutch Colonial type. The growth started with the projecting eaves at the front which eventually, were carried out long enough to make a porch roof and supported at their edge by pillars or columns. An excellent example of this may be seen in the piazza of the Manor House at Croton-on-Hudson, where the flaring slope of the roof is thus carried out and forms a porch covering. The same process may be traced in some of the later Dutch houses of New Jersey and Long Island.

"Almost synchronously with the development of the porch as a distinct feature, we find a tendency to carry the walls a trifle higher and pierce them with a row of small, low windows above the porch roof and immediately below the line of

the eaves which have now become distinct, the porch roof being cut off and made an independent member. These low windows, which were usually on a line a few inches above the floor inside, have been rather facetiously called 'lie-on-your-stomach windows.'"

* * *

THE GUIDE announces with regret the resignation as President of the Building News Publishing Company of Mr. W. D. Harvey, 2nd, who has been actively identified with THE GUIDE since it passed under its present management, six years ago. Mr. Harvey leaves THE GUIDE to take a position with the Graham-Campion Company, general contractors, 1215 Filbert street, where his extended experience in the building field and wide personal acquaintance with architects and owners should bespeak for him a generous measure of success. Mr. Harvey has THE GUIDE's best wishes in his new field of effort.

EDITORIAL NOTES

The *Public Ledger* in an article on Chester, inspired by the tremendous growth which has characterized that section within the past two years, finds space for the following reference to the plant of the O. W. Ketcham Company, near Crum Lynne:

"At the plant of the O. W. Ketcham Company, near Crum Lynne, is produced on an extensive scale every character of architectural terra cotta, a material that in the last few years has become indispensable to the American builder.

Differing from structural terra cotta in that the latter is a standard product made by machinery, architectural terra cotta is made to order by hand to the plans and specifications of the architect. First used in this country as a decorative material in connection with bricks, it became with the dawn of the steel-constructed building a primary material, fully able to stand on its own merits.

There are three kilns at this plant, one of them, with a capacity of 100 tons, said to be the largest in the country. It has 16 fires. The plant's capacity is about 3500 tons a year. Its employes number approximately 150.

"Many of the finest buildings and residences in the country have been ornamented with architectural terra cotta made in this plant, including the famous Guggenheim Mansion on Long Island, the interior of the new chapel of St. Charles's College, at Baltimore; the Masonic Temple, at Worcester, Mass."

The Bureau of Economic Geology and Technology of the University of Texas is conducting an investigation in concrete. The work is being carried out by Professors F. E. Giesecke and S. P. Finch, assisted by E. F. Ries. An advance circular has been prepared which will be sent to engineers and architects upon application and upon request, the Bulletin will be forwarded as soon as it is ready for distribution.

* * *

Unfilled tonnage on Aug. 31, 9,650,357, compared with 9,593,572 on July 30, and 4,908,445 on August 31, 1915. While the report shows gain of 66,745 during month, unfilled orders are still 277,441 tons below high record of 9,937,798, established in May.

* * *

The Engineering Experiment Station of the University of Illinois has just issued two new bulletins, Nos. 86 and 87. The first is on the Strength of the Webs of I-Beams and Girders and reviews a series of tests conducted with mathematical analysis to determine the importance of the diagonal strains and the methods of failures of the girders. The second bulletin concerns the Correction of Echoes and the Reverberation in the Auditorium of the University of Illinois. Dr. F. R. Watson and Mr. Jas. M. White, supervising architect, undertook the correction of the acoustics, the report of their operations being reviewed in the bulletin. Copies of these bulletins may

be obtained from W. F. M. Goss, Director, Urbana, Ill.

* * *

On July 6th all the properties and businesses of the Pennsylvania Steel Company and the Maryland Steel Company were acquired by a subsidiary of the Bethlehem Steel Company.

The General Sales Offices of the Pennsylvania Steel Company, Steelton, Pa.; Maryland Steel Company, Sparrow's Point, Md., and the Titusville Forge Company, Titusville, Pa., have been consolidated with the General Sales Offices of the Bethlehem Steel Company, with headquarters at South Bethlehem, Pa.

* * *

Building returns for August are rather irregular, according to *Bradstreets*. The total number of permits was larger than a year ago, but the aggregate of values is much smaller than in July and only slightly heavier than in August, 1915.

* * *

The Pittsburgh Industrial Development Commission has issued a new pamphlet, "Promoting Progress," which reports the stewardship of the popularly subscribed funds, amounting to nearly \$150,000, which was raised for the creation of the Pittsburgh Industrial Development Commission. The report indicates the work pursued by the organization, which through its direct efforts has located in Pittsburg thirty-six manufacturing plants which employ more than 8,100 persons.

Another publication, "Pittsburgh Promotes Progress," gives some valuable tabulated facts about Pittsburgh.

Pennsylvania Trust Co. (O), 517 Chestnut street. John Duncan (C), 920 Market street. Cost, \$500. Theatre, repairs, Twelfth and Chestnut streets.

Mrs. Miller (O), 1743 North Sixteenth st. A. Raymond Raff Co. (C), 1635 Thompson st. Cost, \$350. Kitchen, brick, 1 story, 9x12 feet, 1743 North Sixteenth street.

C. Brumback (O), 6100 Jefferson street. T. Esbrosuwn (C), 1700 North Sixtieth street. Cost, \$300. Dwelling, repairs, 6100 Jefferson street.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 8, 1916.—Sealed proposals will be opened in this office at 3 P. M., October 20, 1916, for the construction complete of the United States post office at Bayonne, N. J. Plans and specifications may be obtained from the custodian of site at Bayonne, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 7, 1916.—Sealed proposals will be opened in this office at 3 P. M., October 19, 1916, for the construction of the United States post office at Du Bois, Pa. Drawings and specifications may be obtained from the custodian of the site at Du Bois, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 15, 1916.—Sealed proposals will be opened in this office at 3 P. M., October 16, 1916, for library stack, glass floors, etc., in the building, Interior Department Offices, Washington, D. C., in accordance with drawings and specifications, copies of which may be had at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

The Allen "37" has proven so satisfactory
and is of such modern and correct design that
there will be no change in construction this year.
The price will not be lowered, but we cannot
guarantee that there will be no increase, since
the cost of materials is beyond our control.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 39

PHILADELPHIA
September 27, 1916

As The Editor Sees It

IN a circular of information and suggestion to persons contemplating building The Iowa Chapter of the American Institute of Architects embodies some very good advice to be taken by those who lack experience in dealing with "the building game." The chapter quoted is that dealing with "The Selection of the Architect" and some of the points it makes are these:

"After your architect is chosen rely upon him. Do not appeal to contractor or journeyman. Do not be stampeded by neighborly critics and advisers.

"Make up your mind what you must have, then take the architect into your confidence as to the amount you are willing or able to expend; be perfectly frank with him; either take what your money will pay for, or do not build.

"Do not hurry; be satisfied with the sketches before working drawings and specifications are made; and then make no changes without careful consideration and for good reason.

"Arrange every step beforehand in writing; pay fair prices; value for value the world over—you will get no more for your money than you pay for.

"Do business only with a suitable and honest contractor; you cannot get blood out of a turnip."

"Watch the work but do all business through your confidential adviser and supervisor, the architect, who is the master-builder; he alone should give orders to workmen.

"The contractor who comes to you with suggestions or to call your attention to real or fancied errors in the plans and specifications should be referred to the architect, to whom he should have gone in the first place. Make use of the architect's advice and avoid the chance of marring the whole with incongruous furnishings within and environments without; the mind that designed the building should be manifest throughout

"If you follow these few hints, in all, that they might imply, there is no reason, concludes the circular, "why your structure should cost you a cent beyond the estimated price, or why it should cause you more worry than buying a new suit of clothes."

* * *

PRETTY sound advice, we should say, even if it is from the Woolly West. Some of our contractor friends will be tempted to quibble, we know, with the statement that under any circumstances a given job may be done inside of the estimated cost. But then contractors are a case-hardened lot and we don't mind saying right here that the margin between the architect's estimate and the ultimate cost is seldom as bad as the contractor tries to make it. Most of the differences between estimate and final cost are brought about by extras due to changes made by the owner after work is under way. So that the advice of the Iowa Chapter to "arrange every step beforehand" is shrewdly reasoned. The building owner who knows definitely what he wants, communicates those wants in detail to his architect and then goes abroad or away fishing not to return until the work is completed seldom experiences any trouble about "extras." The chap who pays the freight on a cargo of extras is the fellow who either does not know or does not make clear to his architect just what he is after. This is the chap who "wants things done," not down in the original plans, after work is started and you may be sure he is made to pay for his lack of foresight. Not only in Iowa but elsewhere as occasional yawps in the pages of the investment magazines bear eloquent testimony.

* * *

AND in the beginning the Lord said Let there be light and there was light." That light was daylight and it is still the best of all light in spite

of thousands of years of effort to find a better illuminant. In the Clover Room at the Bellevue last week was assembled a body of men whose occupation in life is "making light of things." And a mighty serious occupation they find it as you'd be convinced had you been present to hear some of the discussions. These very sober-minded gentlemen constituted The Illuminating Engineering Society which held here its Tenth Annual Convention. Among the celebrities present were: The electrical wizard, Charles P. Steinmetz, of Schenectady; L. B. Marks, of New York City; Dr. Henry Phelps Gage, of the Corning Glass Works, Corning, N. Y.; C. J. Van Gleson and C. H. French, of the New Jersey Public Service Corporation; J. A. Orange, of the Research Bureau of the General Electric Company, of Schenectady; R. B. Chillas, Jr., of the National Carbon Company, of Cleveland, and a host of lesser satellites, or luminaries of inferior candle power, who talked light until the hearers were lost in darkness. It was altogether a delightful occasion. Lighting has become highly scientific. There was a time when the placing of the lighting fixtures was a but little regarded feature of planning. Not so today. With the immense improvement that has taken place in the artificial illuminants has come a closer and more intimate understanding of refractive agents, eye strain, economical diffusion and a host of minor phases of the lighting question that you would have to be an up-to-date architect or an illuminating engineer to fully grasp and comprehend. Lighting, in other words, has become a big subject.

* * *

SUPPLEMENTING certain observations in our last number on the subject of the shingle roof we are pleased to be able to quote the appended abstract from a bulletin by Herman Von

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.
125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

Schrenk and Arnold Von Schrenk dealing with that subject.

"The conclusions so far reached indicate that several compounds are now available which, if properly applied to wooden shingles, will give a shingle roof a very high degree of fire resistance," remarks the Bulletin in question.

"These same compounds at the present time have every guarantee of permanence, so far as this can be determined from a chemical investigation. They are insoluble in water and give a roof a pleasing appearance.

"For interior work, or for such places where direct weathering is of secondary importance, a very considerable number of compounds can be recommended, ranging from good mineral paints to more expensive materials. The strongest emphasis should be placed on the statement that these results must be regarded as purely preliminary and that it will be absolutely essential to carry out some of the plans suggested before definite recommendations can be made as to the widely extended practical application of one or more of the substances investigated.

"The results certainly indicate that there is every probability that a number of substances will be not only practicable, but fairly cheap, which with simple directions can be applied by the ordinary house owner and give him a high degree of fire protection, whether on a roof or in a building. The time is here now when advantage should be taken of the facts so far ascertained by enlarging on the scope of the demonstration tests. When such enlarged determinations have been made, there will be no reason why the manufacturers of lumber should not go before the public with a perfectly definite and concrete statement as to what may be reasonably expected of their product when properly safeguarded."

* * *

IT is to be hoped that the lumber men, the manufacturers of shingle stains and related industries will not be guilty of the apathy shown by the brick interests in the face of competition at the hands of the concrete and cement industries. By the time the brick people had fully awakened to the real inwardness of the concrete propaganda, concrete had not merely "arrived" but had attained a degree of public favor from which brick has since labored in vain to dislodge it. The crusade of the metal roofing interests against the shingle and in a lesser degree against composition roofing can have but one result if nothing of a practical sort is done to meet and to combat it. It must, inevitably, drive the shingle roof out of the field. It means the ultimate pre-eminence of

the metal roof. Fire protection is the base of every argument. To meet it the shingle and the composition roofing must be made, if not fire-proof, at least fire retardant. And not only this, but this quality of non-inflammability must be emphasised and made plain in a widely circulated and consistent campaign of publicity.

* * *

RECENT numbers of the Journal of the American Institute of Architects, give some interesting and illuminating figures, carefully tabulated, of post office building appropriations from the last congress. These show several instances where the salaries of the employees exceed the postal receipts. In one instance, the postal receipts are \$10,972 and the salaries are \$16,992. In another, the receipts are \$10,681 and salaries \$13,900. In addition, instead of paying a rent of \$780 and \$1,140 respectively, the cost of operating the new building is \$3,500. What kind of thrift is this for Uncle Sam? Are the people to have no better guardians of their interests than these records show?

In a list of public building bills introduced into the sixty-fourth Congress, many villages with a population of 2,500 or less ask an appropriation of from \$50,000 to \$100,000 for post office buildings. In one southern state, five villages of 500 inhabitants or less ask for \$75,000 post office buildings. In the face of this rank record of lavish extravagance, the people are asked and required to make up deficits by excess taxation. Are we to continue to be thus imposed upon?

A gleam of public spirit has appeared in a mid-western city which contemplates the rejection of an appropriation, now before Congress, for \$100,000, which would only remodel and furnish up an old building, adding a few offices; awaiting the time when the money could be spent advantageously, on a new building, which will soon be required. Here is the spirit of the true homebuilder and may there be more of them.

* * *

HENRY WELLINGTON WACK, who as Executive Adviser handled the very successful celebration of Newark's 250th anniversary, wrote for the committee in charge of that enterprise an article on "The Fellowship of Cities." One of the chapters of this much-discussed article deals with "The Psychology of Publicity." It is so very good in its way that we are moved to quote it at some length.

"The psychology of publicity is interesting. It sometimes achieves the impossible," says Mr. Wack. "It is the subtlest influence that is agitating the world to-day. Publicity is as big a

factor in the European war as ammunition. After all, a bullet or a shell reaches a small mark as compared with the written word and its impact upon the minds and hearts of million of readers. All the belligerents are fighting a campaign in printers' ink, as much as in blood upon the heights and plains of Europe. They want to win public approval by creating public opinion, and they know that heroism afield amounts to little in national fame unless all the world can read about it. Publicity instructs public opinion, it guides it for good or ill.

"Social intercourse that is left to chance environment seldom yields anything of worth. It is drifting through life and accepting its tips like an itinerant eking out his inane existence. But social intercourse, intelligently sought and directed, is invariably a means of self-development and a material increase of self-values. Not your value to yourself alone, but your value to society, to your profession, your business, your family, your city, State and country, rises in just that ratio in which you embrace and intelligently direct an enlightened social, civic and industrial intercourse. This is not an age of independence, but one of interdependence.

"Reduce this to the terms of the new science and you have publicity; in other words, an affirmation of your desirability as a citizen, a business or professional factor in your sphere. Hide yourself, shrink from your fellow man, sneak through the byways when the broad open road buzzes with the traffic of mankind and your chances of getting anywhere are about as great as a submarine's would be on a mountain.

"Nature is the greatest of advertisers. She produces nothing which does not maintain its publicity department. Her flowers have perfume of infinite variety to lure that which fertilizes them into further fecundity; to proclaim their presence to bee, bird and insect life. They have color by which they may be distinguished, and some have luminous attributes at night.

"That is intelligent floral publicity, not an accident."

* * *

THE vegetable family is a persistent advertiser, and no one would say that the onion or garlic were very modest advertisers. The zoo, of course, has some advertisers which ought to be suppressed, but that is not pertinent here.

"The city that hopes to thrive in aloofness from other cities will ossify. Arteriosclerosis will deaden it. It must make itself and its products known. Talking amongst ourselves is not the kind of publicity that propels us anywhere.

"The modern attitude toward virtue, beauty, genius, talent, wealth, desirable

possessions and achievements is, that if these be unknown, unemployed and unheralded, they are of no material value in the sum of human endeavor. A potential Shakespeare, a Newton or a Lincoln may sit beside us any day in a street car; a cure for cancer and poverty's panacea may lie unused within our grasp. Without the revelations of publicity these great men, and this boon to the afflicted, are lost to mankind."

* * *

THE moral is that it pays to advertise. It pays the individual, it pays the corporation, it pays the municipality. The Emersonian idea that a man might live in a wood and thrive if he

were able to produce an article of merit no longer holds true. Let your merits be what they may, the world as at present constituted will never beat a track to your door unless those merits are proclaimed and made known of men. We are living in an age of mighty voices. It is not wisdom in such an age to expect great or notable results from the voice that is not heard at all or but seldom heard, or so feebly heard as to make its message a thing of doubt and misunderstanding.

It not only pays to advertise. There can be no permanent success built on any foundation but advertising. Publicity is as indispensable as the air we breathe.

EDITORIAL NOTES

Definite increases are reported on numerous lines, such as builders' hardware, hinges, butts and other wrought goods, and also on sash, cord, rope and other goods based on cotton. Manufacturers and merchants quite generally expect a good business for the rest of the year, while there are well-informed buyers who are placing orders six months ahead, and in some cases twelve months hence.

* * *

The Russell & Irwin Mfg. Company have withdrawn prices on all of its lines of builders' hardware, with a few exceptions, and are issuing new prices showing advances of approximately 10 per cent.

The Reading Hardware Company has also withdrawn many of its prices on builders' hardware and similar lines. New discount sheets will be ready for distribution as soon as they can be prepared, showing advances of about 10 per cent.

* * *

The new marble pulpit at the Cathedral of St. John the Divine is the most elaborately carved of any in the world. John Evans & Son of Boston were the carvers and Henry Vaughn of Boston was the architect.

* * *

The George A. Fuller Company will finish the Lincoln Memorial at Washington a year ahead of the contract time. The design is an adaptation of a Grecian temple and is being worked out in marble at a cost of \$2,590,000, from plans by Henry Bacon of New York. The same contractor is moving rapidly with the Arlington Amphitheatre at Washington. to cost \$750,000, from plans of Carrere & Hastings of New York.

* * *

It is not difficult to account for the new demand for high-cost apartment houses. The lessee of a \$25,000 suite in

one of the new houses on Fifth avenue will save \$50,000 a year by becoming a tenant instead of continuing to live in his own big house. He has said that the apartment will give him everything that his \$1,500,000 residence provides. The yearly cost of maintaining an old-style private house on Fifth avenue comprehends figures so large that this style of city living has reached the limit of its popularity, especially when compared with the alternative of a flat in the same neighborhood, plus a place in the country for the summer, for a smaller annual expenditure that is needed for the town house. Yet, for many families a town house in some good neighborhood will always be indispensable.

* * *

Between 1866 and 1893 real wages in this country rose more than 100 per cent. in industry and 70 per cent. in agriculture, according to government statistics. At the end of the Civil War wages rose and prices fell, and for a period workmen were better off than ever before in the history of the country. Since 1883 there has been a steady rise in the cost of commodities, and since 1903 in the rate of wages paid in organized trades. Unorganized workers in the cities, owing to the higher living costs, and the greater unemployment, are on the average less well off proportionately than they were ten and twenty years ago.

* * *

Delegates from the nine commercial organizations comprising the Philadelphia Joint Committee on the Reasonable Regulation of Railroads met yesterday in the Bourse to formulate the joint body's course of action in the congressional investigation of railroad regulation and to make further plans to crystallize a national sentiment for exclusively Federal regulation of the railroads. The

meeting was called by Malcolm Lloyd, Jr., chairman of the joint committee.

* * *

There was a meeting of export managers last night in the assembly room of the Philadelphia Chamber of Commerce for the purpose of discussing and threshing out export matters and to plan for the general uplift of the individual exporter and the general business of the city and port. Dr. E. E. Pratt, chief of the United States Bureau of Foreign and Domestic Commerce, addressed the meeting on "Co-operation."

* * *

The Wentworth Institute, Boston, is about to add to its courses of instruction one on practical concrete work, having for its object the training of young men for the work of concrete foremen and contractors. The Institute has set aside one of its best laboratory rooms for this course and is fitting it up with modern testing machinery and other necessary equipment. The first sessions began Monday, September 18.

* * *

N. B. Kelly, general secretary of the Philadelphia Chamber of Commerce, will tend the convention of the National Association of Commercial Organization Secretaries in Cleveland this week, representing the Philadelphia chamber.

* * *

The Ph. Van Ommeren Corporation of 42 Broadway, have made numerous investigations in regard to the economical conditions and industrial markets in the Netherlands and the Scandinavian countries. They are in a position to advise American producers desiring to secure foreign trade, as to the markets and shipping conditions.

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Packing and Sales House, 827 Callowhill street, Philadelphia. Architects, private plans. Owners, Wilson & Co., care Mr. Starr, 139 North Delaware avenue, Philadelphia. Concrete, steel and brick, 4 stories, electric lighting. Plans in progress. Too early for details.

Office Building, Wissahickon avenue, south of oberts avenue. Architect, Thos. B. Lippincott, Stephen Girard Building, Philadelphia. Owners, Midvale Steel Co., Widener Building, Philadelphia. Brick, reinforced concrete and terra cotta, 6 stories, 170x50 feet, slag roof, steam heating, electric lighting, composition, concrete and mastic floors, metal lath. Owners have received bids.

Residences (19), Sixty-eighth avenue, Sydenham and Fifteenth streets, Philadelphia. Architect, private plans. Owner, John F. Zeh, Fifteenth and Haines streets, Philadelphia. Brick, stone and stucco, 2 and 3 stories, 16x57 feet, 16x46 feet, and 16x56 feet, slate roofs, combination lighting, tile work, hardwood floors (heating reserved). Owners is taking sub-bids on all lines.

Residence (alt. and add.) and Garage, 4207 Walnut street. Architects, Newman & Harris, 1123 Broadway, New York City. Owner, Joseph H. Reilly, 4538 Chestnut street. Brick, plaster and terra cotta, 3 stories, tile roof, electric lighting, oak floors, metal weather strips, cabinet work, tile work (plumbing and heating reserved). Architects have received bids.

Police Station (alt.), 32d District, Sixty-fifth and Saybrook avenue. Architect, Louis E. Marie, City Hall, Philadelphia. Owners, City of Philadelphia, Department of Public Safety, Wm. H. Wilson, Director, City Hall. Consists of reinforced concrete manure box. Owners taking bids, due September 27th, at noon. The following are figuring: W. W. Anstine & Co., 1218 Filbert street; John L. Connor, 1319 Arch street; Drehmann Pav. Co., 2622 Parrish street; F. S. Markland, 1502 Sansom street; Mitchell Bros., 2125 Race st.; John H. Jordan, Thirty-first and Oxford sts.; Gaffney Const. Co., 1927 Poplar street; E. C. Durell, 1713 North Twenty-fourth street; Wm. Morrow, 320 Harmony street.

Recreation Building, Berks, Blair and Palmer streets. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Board of Education, City Hall. Brick, 1 story, 261x80 feet, consists of swimming pool, dressing rooms and iron fences, asbestos shingle and slag roofs, proposal bonds (electric work and plumbing separate bids). Owners have received bids.

Recreation Building, Twenty-fourth and Jackson streets. Architect, Philip H. Johnson, Land Title Building. Owners, City of Philadelphia, Board of Recreation. Brick, 1 story, 69x181 feet, asbestos shingle and slag roof, proposal bond (electric work and plumbing separate bids). Owners have received bids.

Recreation Building, Sixteenth and Wyoming streets, Philadelphia. Architect, Philip H. Johnson, Land Title Building. Owners, City of Philadelphia, Board of Education. Frame, 1 story, 2x24 feet, asbestos shingle roof, proposal bond (electric work separate bids). Owners have received bids.

Factory (add.), Tioga, Philadelphia. Architect, private plans. Owner, name withheld. Brick, 2 stories, 99x60 feet, slag roof, electric lighting, concrete floors, steel sash, elevator.

I. T. Shoemaker, 1324 Walnut street, taking sub-bids, due September 25th.

Factory (alt.), 615-29 N. Fifth street. Architect, private plan. Owners, Victor Gas Fixture Co., 18 South Seventh street, Philadelphia. Brick, 2 stories, consists of general interior alterations, steam heat, electric lighting, cement floors. Owner will sub-let all contracts.

Store (alt.), 223-27 Arch street, Philadelphia. Architect, C. E. Schermerhorn, 430 Walnut street, Philadelphia. Owner, Ellen C. Butler, 1527 Spruce street, Philadelphia. Brick, 5 stories, 55x90 feet, slag roof, steam heating, electric lighting, metal sash, elevator and interior alterations. Architect has received bids.

Store and Apartments (alt. and add.), south east corner Broad and Poplar streets. Architect, Chas. E. Oelschlager, Harrison Building. Owner, Wm. Conner, on premises. Brick, 3 stories, 24x60 feet, slag roof, steam heating, electric lighting, tile work. Revised plans in progress.

Bridge, Margie street, Philadelphia. Engineers, Bureau of Surveys, City Hall. Owners, City of Philadelphia, City Hall, Philadelphia. Concrete, 60x100 feet. Owners have received bids.

Stores (2), 1304-06 Columbia avenue. Architect, Geo. S. Idell, 34 South Seventeenth st., Philadelphia. Owner, Mrs. Tillie K. Daut, care architect. Brick, 3 stories, 32x59 feet, slag roof, steam heating, electric lighting, hardwood floors, tile work. Architect has received bids.

School (wing), Twenty-seventh and Clearfield streets. Architect, Horace Cooke, Nineteenth above Chestnut street. Owners, Board of Education, Nineteenth above Chestnut st. Completion of present contract started, by Henry L. Brown, New Amsterdam Casualty Co., Finance Building, has received bids.

Garage, 1714-6 W. Venango street, Philadelphia. Architect, private plans. Owner, Jas. Hilliard, 1710 W. Venango street, Philadelphia. Brick, 1 story, 42x115 feet, slag roof. Plans in progress.

Service Building, Broad and Wood streets, Philadelphia. Owners, Packard Motor Car Co., L. J. Eastman, manager, 216 North Broad street. Architects, Kahn & Wiley, Detroit, Mich. Brick, concrete and steel and terra cotta 8 stories, 185x70 feet, slag roof, electric lighting, metal sash. Plans in progress. Architects will take bids in about one week.

Garage, Kensington, Philadelphia. Architects, Neubauer & Boyd, 1118 Chestnut street, Philadelphia. Owner, name withheld. Brick, 1 story, 60x102 feet, slag roof, steam heating, electric lighting, cement floors, gasoline storage system. Preliminary plans in progress.

Factory, southwest corner Swanson and Clymer streets. Architect, private plans. Owner, L. B. Botfield, 624 South Front street, Philadelphia. Brick, 2 stories, 38x50 feet and 20x55 feet, slag roof (electric lighting, gas and steam heating reserved by owner), cement and pine floors. Owner is taking approximate bids. Smith-Hardican Co., 1606 Cherry street, is figuring.

Store Buildin (alt. and add.), 4055-57 Lancaster avenue. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, W. J. McCormack, on premises. Brick, 2 stories, addition, 20x72 feet, slag roof, electric lighting (heating reserved). Architect taking bids, due October 2d, at noon. Lam Building

Co., 1001 Wood street; J. T. Vanderberry, 5302 Pemberton street; J. D. Fisher, 5713 Market street; Warren E. Biscoe, 3954 Ludlow street; Metzger & Fisher, Denckla Building; Smith-Hardican Co., 1606 Cherry street, and Niemeper & Wallace, Weightman Building, are figuring.

Stores and Apartments (alt. and add.), 5340 Germantown avenue, \$1,500. Architects, Neubauer & Boyd, 1118 Chestnut street, Philadelphia. Owner, John F. Conlin, 12 W Willow Grove avenue. Brick and stone, 2½ stories, 18x90 feet, hot water heating, combination lighting. Plans about completed. Will take bids in a few days.

Garage, Germantown avenue and Duval st., Philadelphia. Architects, Neubauer & Boyd, 1118 Chestnut street, Philadelphia. Owner, John F. Conlin, 12 W. Willow Grove avenue. Brick, 1 story, 80x105 feet, slag roof, steam heating, electric lighting, cement floors, gasoline storage system. Plans in progress.

Mill Building (alts. and add.), 2706 North Hancock street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, A. Turkington, on premises. Stone and brick, 3 stories, addition, 30x22 feet, slag roof, steel sash, steam heating, plumbing, elevator, pine floors. Plans about completed. Owners will take bids in one week.

Hospital, 1822 Spring Garden street, Philadelphia. Architects, Savery & Scheetz, Stephen Girard Building, Philadelphia. Owners, Philadelphia College of Osteopathy, 832 Pine street, Philadelphia. Brick and concrete, 3 stories, 50x110 feet. Plans in progress. Too early for details.

Playground (shot tower), Front and Carpenter streets. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Board of Education, City Hall. Consists of brick piers, iron fence, concrete and granite coping and granolithic paving. Owners taking bids, due September 26th, at noon. Wm. E. Mundy, 228 South Alder street, is figuring.

Residence (alt. and add.) and Garage, 4200 Walnut street. Architects, Cowan & Harris, 1123 Broadway, New York City. Owner, Jos. H. Reilly, 4538 Chestnut street. Brick, plaster and terra cotta, 3 stories, tin roof, electric lighting, oak floors, metal weather strips, cabinet work, tile work (plumbing and heating reserved). Architects taking bids (revised), due September 25th. In addition to those reported, Jas. H. Wells, Heed Building, is figuring.

Store and Apartments (alt. and add.), south east corner Broad and Poplar streets. Architect, Charles E. Oelschlager, Harrison Building. Owner, Wm. Conner, on premises. Brick, 3 stories, 24x60 feet, slag roof, steam heating, electric lighting, tile work. Revised plans in progress.

Bridge, Margie street, Philadelphia. Engineers, Bureau of Surveys, City Hall. Owners, City of Philadelphia, City Hall, Philadelphia. Concrete, 60x100 feet. Owners have received bids.

Stores (2), 1304-06 Columbia avenue. Architect, George S. Idell, 34 South Seventeenth street, Philadelphia. Owner, Mrs. Tillie K. Daut, care of architect. Brick, 3 stories, 32x59 feet, slag roof, steam heating, electric lighting, hardwood floors, tile work. Architect has received bids.

School (wing), Twenty-seventh and Clearfield streets. Architect, Horace Cooke, Nineteenth above Chestnut street. Owners, Board of Education, Nineteenth above Chestnut street. Completion of present contract started by Henry L. Brown, New Amsterdam Casualty Co., Finance Building, has received bids.

Factory, Twenty-eighth and Fletcher sts., Philadelphia. Architect, Fredk. T. Uezzell, 147 North Third street, Philadelphia. Owner, Wm. Cohlman & Son, Inc., 2522 Dauphin st., Philadelphia. Brick, 3 stories, 55x110 feet, slag roof, steam heating, electric lighting, concrete floors, elevator, fire doors, steel rolling doors, ventilators. Plans about completed. Architect will be ready for bids in a few days.

Residences (12), Sixty-seventh and Elmwood avenue, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owners, Stoltz & Maloney, Sixty-sixth and Elmwood avenue. BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 40

PHILADELPHIA
October 4, 1916

As The Editor Sees It

THE time-honored policy of awarding contracts to the lowest bidder seems to be coming in for general criticism. There appears to be a widespread trade awakening to the fact that this "lowest bidder" system has developed an order of competition that is not compatible, either with good work or with healthy business standards. Indeed the time would seem to be ripe for a movement, practically nation-wide, to supplant this system with something based upon a clearer recognition of the essential mutuality of contract obligations. This interest in doing away with the lowest bidder idea is by no manner of means confined to the building trades, as a letter to the *Engineering Record* from Zenas W. Carter, field secretary of the Granite Paving Block Manufacturers' Association of Boston, goes to show. Writing on the basic unwisdom of the present method Mr. Carter says:

"In my opinion, most city engineers and city officials recognize that this is a pernicious practice, and that many times a city spends more money for its work through this method and gets a poorer job than if the contract were awarded at a higher price. It may be that the difficulty of changing the practice is entirely due to the attitude of the average citizen, who so frequently comes to the conclusion that city officials are dishonest unless contracts are awarded to the lowest bidder. At the same time it is certain that the citizen in his private life and the manufacturers do not place their orders solely on the basis of the lowest bid. It seems to me that some method by which cities would award contracts to the bidder whose price was nearest the average would tend to improve the class of contractors, raise the standard of work, and make city work more attractive to efficient, responsible parties. Some such method of awarding contracts to the bidder nearest the average would prevent

a contractor from receiving excessive prices and at the same time would prevent the city from accepting bids from irresponsible men, who bid so low that they must either fail before the work is completed or skin the job. * * * By making the average bid the standard, the aim of the contractor in every case would be to make the price absolutely correct and just for the work. It would give the engineer an opportunity to demand that the specifications be lived up to and relieve him of the feeling that it would be unjust to insist upon right adherence to the specification when the contractor had taken the job at a losing price."

* * *

THIS average bid suggestion is a good one, but like every other suggestion advanced in this connection is open to a serious objection. In the case of public work it might conceivably operate to throw contracts to a favored bidder. In the matter of private work it would enable the architect in every case to arbitrarily control the award. What THE GUIDE would like to see, and we feel that it will come in due course, is a thorough and searching analysis of this entire question by a committee representing jointly the American Institute of Architects and the National Association of Master Builders' Exchanges with a view to arriving at an equitable and mutually satisfactory solution of what has come to be a vexed and highly complicated problem.

The ideal solution would seem to lie in the quantity surveying idea in vogue abroad. Certainly with an expertly computed table of the quantities at the command of every bidder on a given job the probability of irresponsible bidding would necessarily be largely reduced.

* * *

KEITH'S MAGAZINE" discusses one of the many phases of this problem—that relating to the

man who is building a home, in the following terms:

"There is a more or less wide-spread feeling among home builders that the contractor is a "cunning" one, against whom it is necessary for the hapless owner to guard himself by all the arts of which he may be master—that he is a wizard who by the use of a few pieces of paper and the practice of his own "rites" and mysteries, converts the great piles of lumber, brick and stone, with other curious things, first into the confusion of the half-built house and then after a lapse of time and the clearing away of the debris, accomplishes the bringing forth of another new home.

"Does this new home meet the ideals of the owner? Yes, provided perchance he is generous in his allowance for the work, that he has been wise in the choice of his contractor, that the contractor and all of his workmen have at all times been particular, so much so as the housewife herself, and lastly, though not least in importance, that the contractor has fully understood what has been in the mind of the owner; then it is that the new home proves to be just what the owner expected.

"Now, if the new home is not perfect, wherein lies the trouble? We may generally say that it is because of one of two reasons or both: first, a misunderstanding between the owner and the contractor as to what the owner really wanted, and secondly, there not being a clear agreement as to what the cost of the completed house was to be. If both of these reasons apply, the owner, as well as the contractor, is going to have some "fun."

"It is easy to see where the architect comes in and where his services are to the interests of the owner and to the satisfaction of both owner and builder, for it is up to him to see that there is a perfect understanding on all of these mat-

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

**BLUE
PRINTS**

ters, to learn what the ideals of the owner are and his actual needs and to reconcile these with the size of his pocketbook, and this should all be done before a contract is made with the contractor, and by so doing the architect helps to interpret clearly to the contractor what is wanted and to look out that it is secured.

"While some contractors may take advantage of the unsophisticated owner, we think that much consideration is really due him. The present system of "bidding" for a job works a good deal of hardship on the contractor. He must spend a great deal of time and effort in figuring estimates on many a job he does not get. If he figures low enough to get under his competitors, he may have to take it "out of the job" or dig down into his jeans. After all, the best results are secured by cordial co-operation in the triangle relation between the owner, the architect and the contractor."

* * *

AFTER all is said, the ideal condition is that stated in the closing sentence of the article here quoted. "The best results are secured by cordial co-operation in the triangle relation between the owner, the architect and the contractor." The problem is to devise some system whereby this "cordial co-operation" may be made obligatory upon all of the parties to the triangle to the ultimate exclusion of the contractor who makes "guess" bids and then trusts to favoring circumstances to fight his way to a very meagre and inadequate margin of profit.

* * *

AN interesting little chat on "Early Landscape Architecture" grew out of certain comment in the pages of *The New York Record and Guide* on the death of Winthrop Sargent.

"Winthrop Sargent's death drew out few public references to his famous estate, 'Woodneathe,' at Fishkill-on-the-Hudson, and the unique place it fills in the history of American landscape architecture," said *The Record and Guide*. "Preserved for three-quarters of a century, Woodneathe was the most notable and costly among the Hudson River estates designed by Andrew J. Downing, who was the exemplar of Olmsted, Vaux and a long line of architects, landscape gardeners and park and city planners. Its twenty acres were planted with specimens of every known tree, vine, shrub and bulb that would grow in the Hudson valley, so arranged as to present the most beautiful floral patterns and vistas imaginable.

"The nurseries of Europe were searched to supply curious growths. In 1897 the trees that had survived half a

century at Woodneathe, were catalogued in one of the most inspiring and instructive descriptions of an American country place ever written. Woodneathe helped us to discover what parts of the world can send beautiful plants that can succeed in this climate, and the further lesson that enduring beauty cannot be made with colors of purple, yellow and white, but that the best trees and flowers of all are those which are native to each particular region.

"Downing taught us, in the Sargent place, and at other Hudson River and Newport estates and parks which he designed, to break up a panorama into several views, and not to permit a full sweep of the horizon from the house. Notice on your next trip up the river that nearly all the notable private grounds exemplify this principle. Downing's vistas were sometimes round like an oriel window, sometimes square, or long and narrow, sometimes planned as to whether it was a mountain, a lake or a shore that was framed in them.

"Modern real estate interests are realizing more and more the importance of good landscaping in adding to the value of a country place. The present keen demand for suburban estates and the reluctance of owners to part with them testify to the renewed interest in rural architecture. Some of the old places on the Hudson which Downing planned and planted have been handed down in families for generations. But years ago, alas, not a few were allowed to fall into ruins. Nearly every old place of size around Downing's lifelong home at Newburgh carries the evidence of his artistic genius. Close by Woodneathe is the home of the Dewints, where he built the first example of Elizabethan architecture in this country. Also near is the Howland estate, which was recently conveyed as a free gift to the City of Beacon for a public park. From Woodneathe the visitor can discern across the river a long line of park-like residences, most of which are indebted to Downing or his brother, Charles, for something.

"Downing is remembered as a man of letters as well as an architect and horticulturalist. His biographer, George William Curtis, was plainly of the opinion that his greatest achievements were in literature, notwithstanding the fame that his embellishment of the public grounds at the national capital brought him. His 'Landscape Gardening,' 'Cottage Residences,' 'Architecture of Country Houses,' and 'Fruit and Fruit Trees of America' are classics and established him as the first authority on rural art and horticulture. Downing was more than a genius, he was a prodigy. From 1840 to about 1870 Woodneathe was visited by thousands of home builders for inspira-

tion, and there is much still to be learned there, as well as admired."

* * *

NEW YORK is seriously discussing the advisability of licensing its builders. As the result of a careful study and consideration of the recent collapse of the building at 188th street and Marion avenue, in the Bronx, by experts of the Advisory Council of Real Estate Interests, it has been suggested that builders be licensed. This action, it is claimed, would cure numerous existing evils and fix the responsibility. Discussing this subject, Julius Franke, of the firm of Manicke & Franke, said: "There is an ever increasing demand for safeguarding buildings during construction. The Building Department is supposed to be responsible for the proper erection of buildings, but it no more can undertake this great task efficiently than could the Board of Health or any other medical board undertake to prevent carelessness or malpractice in the treatment of sick persons.

"Some system should be adopted whereby inefficient or ignorant persons or persons ignorant of the practice and principles of building be not allowed to supervise or direct the erection of structural parts of a building.

"In Europe this is mostly done by licensing or in some other way allowing only those who are proficient to have charge of the erection of buildings.

"I would suggest some law whereby the proper supervision of buildings in the course of construction or when altered is made mandatory.

"I would further suggest that when plans are filed the name of the individual or firm who supervises construction be mentioned in the application for a building permit and that when any change is made the department must be notified.

"The supervisor, who may be an architect, engineer, or builder, should possess the proper qualifications. These qualifications, to be arrived at by stipulating members of certain architectural societies, licensed architects, (licensed architects are now provided for by New York State and other State laws), also by accepting members of certain builders' societies as competent, and also any other individual who has the proper qualifications arrived at through examination.

"I believe that the builders of the city would be glad to co-operate with you in any effort to improve conditions whereby the incompetent and ignorant builder will be eliminated or be compelled to employ some one who is competent to supervise his work.

"I might add that if the insurance and trust companies making building loans would be more particular about the architect and the supervision on the part of

the architect or responsible superintendent it would be a great step toward eliminating the irresponsible supervisor.

"Most of the insurance companies have their own representative, who approves of the plans and who from time to time goes to the building to look over the work. This supervision on the part of these companies is, however, mostly for the purpose of making payments and it is impossible for them to go into all the details of proper supervision.

"They must rely upon the architect or builder and for that reason they should be more particular about the architect and the builder and that the work shall be properly supervised by them."

* * *

OTTO M. EIDLITZ, of the firm of Marc Eidlitz, said: "I agree with what Mr. Franke said in his statement. The situation is that most of these inspectors have a great deal more work to look after than one man can reasonably inspect in a thorough manner; secondly, in the last few years the number of irresponsible persons who have gone into the building business and have attempted to erect buildings from plans purchased outright from architects, without any supervision from the authors of the plans, has been steadily increasing.

"About eight or ten years ago a number of tenement houses collapsed in the Bronx, due to the poor stone foundation walls. At that time the recommendation was made that builders should be licensed. I do not think that it is possible to present a real cure for the situation which exists in the building industry, especially where speed plays so large a part in the erection of buildings to-day, but if the builder were licensed and if the architect were made responsible for the supervision of the plans which he draws, you would at least be taking a step in the right direction."

* * *

THE blighting effects of war on real estate, building and the allied trades in Germany are shown in a series of reports from United States consular agents printed in a supplement to Commerce Reports by the Department of Commerce at Washington, D. C.

According to Consul William Thomas Fee in Bremen: "Expenditures for rent have been curtailed, with a resulting scarcity of the cheaper class of living quarters. In the year 1914 the total amounts of rentals charged for dwelling apartments, available in the City of Bremen, (houses owned by the occupants, which is largely the case in this city, are not included) amounted in value to \$136,898, of which houses representing an annual rental of \$21,843 remained vacant.

"In the year 1915 the total amount of rentals amounted to \$189,031 in value,

and in that year houses representing an annual rental of \$72,383 remained vacant.

"The fact that from August, 1914, to November, 1915, only 175 building licenses were applied for and granted, against 1,087 licenses granted between August, 1913, and August, 1914, illustrates sufficiently the condition of the building industry."

In the City of Munich: "Building and allied trades suffered chiefly from lack of labor and the comparative high price and scarcity of building materials: moreover, with numerous apartments either empty or the rental thereof materially reduced, there was little incentive for building new houses. The caution displayed by banks in furthering building operations tended to discourage the same.

"The quarry and brick industries did only a small business. Cement works, however, flourished, practically their entire output being used by the military authorities."

In the City of Chemnitz, Consul John Q. Wood says: "The effects of the war were felt most severely in the building trade. Factories engaged in producing articles used for the construction of houses and other buildings and in fur-

nishings were compelled to reduce their forces to a minimum, to cut the weekly working hours, or to close altogether.

"Architects and builders are practically without any new work, being occupied with the completion of old contracts and a few factory extensions, caused by inadequacy of the present plants to meet the heavy demands for quick delivery of war materials.

"In 1913 there were completed 109 new dwelling houses, 9 factories, and 25 factory extensions, as compared with 193, 9, and 25, respectively, in 1914, while in 1915 new apartments and houses numbered but 56, factories 5, and factory extensions 4.

"Most of the laborers usually employed in this class of work have found other employment, and at the end of the year the City of Chemnitz had only 250 laborers without work.

"With the cessation of building there have been practically no land sales, and valuations have decreased materially. The curtailment of expenses, especially among the middle classes, has resulted in many families moving into less pretentious apartments, thus causing a large number of vacancies."

EDITORIAL NOTES

The operating expenses of skyscraper office buildings vary from 35 to 55 per cent. of gross income, and a building that is producing within 80 per cent. of its possible earning capacity is considered a normal proposition in these times. If it earns more than 5 per cent. on the total cost of land and building, it has been built on cheaper land than can now be obtained on Broadway or has special advantages, according to *The Record and Guide*.

* * *

It all depends upon the viewpoint and also upon the locality from which the view is taken. Apropos of the remarkable demand for apartments in New York City, which has already created an actual scarcity for those of the \$1,500 annual rentals and under, it is interesting to read in *The National Real Estate Journal* of St. Paul, Minn., that, although the editor admits no set prejudices, yet "they are not the best kind of domiciles for most people, though they seem necessary for some. But, on the whole, we feel that such structures are becoming too numerous and pervasive. The home spirit thrives in inverse ratio to the number of buildings close by. There is a strong sentiment abroad, however, that before long the supply of flats will exceed the demand."

Philadelphia's wealth is fabulous. It has one hundred and five national banks, trust companies and saving societies, with a capital and surplus of one hundred and seven million dollars (\$107,000,000), and deposits of nearly six hundred million dollars (\$600,000,000).

Barrett Specification Roofs

Guaranteed
for
20
Years

We Standardized the Roofs— Now We Standardize the Guarantee!

A DOZEN years ago the introduction of The Barrett Specification standardized roofing practice throughout the country and gave to the old "tar-and gravel roof" a definite character and reliability.

Local contractors, in the past, have been accustomed to guaranteeing roofs of this type, free of repairs for from five to ten years.

To good reliable roofers such guarantees were no burden because the roof they constructed would last much longer than the guaranteed period.

The fly-by-night roofer, however, did a poor and cheap job, gave his guarantee recklessly—and was generally out of business when the roof leaked or trouble came.

As manufacturers of the materials used in Barrett Specification Roofs we, therefore, determined a short time ago to standardize these guarantees and make them of real value to users of Barrett Specification Roofs.

We, therefore, arranged with the U. S. Fidelity & Guaranty Company to issue a 20-Year Guaranty Bond covering every Barrett Specification Roof of 50 squares and over *wherever*

our inspection service was available.

Today this Guaranty and Inspection Service covers all towns of 25,000 population and over and most of the smaller places in the thickly populated parts of the United States and Canada. This means that only 5% of the population is outside the radius of our Guaranty.

This bond takes the place of short-term guarantees formerly issued by the local roofer and obviously is far better.

The principal roofing contractors and architects throughout the country are co-operating with us and we believe the plan is going to be so successful that more Barrett Specification Roofs will be laid the next few years than ever before in the history of the business.

As an evidence of this you will be interested to know that during the first few weeks of its operation, *several million square feet* of Barrett Specification 20-Year Guaranty Roofs were specified and contracted for.

We want to emphasize the point that the Guaranty Bond costs you nothing. *The service is free in the interest of good workmanship and the good repute of our materials.*

Barrett Specification Roofs are recognized today as the standard covering for permanent buildings of all kinds. The cost, per year of service, is less than any other roof covering. They take the base rate of insurance and are approved as "Class A" construction by the Underwriters' Laboratories, Inc.

If you are interested in the proposition we shall be glad to send you further details on request.

A copy of The Barrett Specification, with roofing diagrams, sent free on request.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.

DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Edison Says

"Electricity will sweep and dust, wash and dry dishes, wash and iron, cook and sew." With the present low rates for Electricity, it is truly economical to let Electric appliances take care of the routine household drudgery. Their use has solved many a servant problem, and made life easier and more pleasant for many a housewife.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 41

PHILADELPHIA
October 11, 1916

As The Editor Sees It

A SOMEWHAT novel expedient, aimed at the loss of time, money and estimating talent incident to the present system of competitive bidding, is being tried out in the Middle West by an organization known as "The Quad City Builders' Exchange." The members of this organization, which has a membership of 225 general contractors, sub-contractors and material men in the four cities of Rock Island, Moline, East Moline and Davenport, will enter no bids on any work unless provision is made to compensate them for the loss of time in the event that some other bidder gets the award.

The proposition of the Quad City Exchange is thus explained by *The American Contractor*:

"The membership of the exchange, it is stated, includes nearly every kind of a contractor in the cities named, and the plan therefore is inaugurated with a unanimity that promises to give the new system a thorough demonstration. It was adopted by a unanimous vote of the exchange, and therefore has back of it the united support of the members.

"It is confidently asserted that with this plan in effect buyers will no longer call for bids solely for the purpose of dickering. The experience of contractors here has no doubt been that of the common lot. They have put in a considerable amount of time and a large amount of labor in figuring on jobs, preparatory to entering bids, often losing the contracts because they were a few dollars higher than the successful bidder. Under the new plan it is proposed that the contractor shall receive compensation for all bids submitted.

* * *

THE intent is that the buyer may have as much fair competition as he wishes to pay for. After he has chosen his contractors in a fair and unprejudiced manner, and has further

paid a just and reasonable price for the competition, he shall be under no obligation to the bidders. He may make his own decision based upon his own opinions of the qualifications of the bidder's price or a comparison of both.

"If the buyer of the work to be figured upon is acting as a private individual, then he may choose his own method of selecting bidders. He reserves the right to select as many or as few as he may choose or wishes to compensate.

"After all bids have been received and opened, the buyer shall, within ten days, according to this plan, pay to each bidder who has bid in strict accordance and has complied with all the demands contained in the plans and specifications and whose bids do not exceed by fifty per cent. the amount of the bid upon which the contract is awarded, or the lowest legitimate bid, if the contract is not awarded, a sum equal to the square root of the average of all bids received, multiplied by .7. As an example, if the average of all bids received shall be \$90,000, the square root of which is \$300, multiply \$300 by .7, which equals \$210, the amount which shall be paid to each competing bidder in payment for the labor and expense involved in estimating and as a complete waiver of all obligations."

While other conditions were included in the resolution adopted by the Quad City Exchange, the foregoing explains the working plan regarding future estimating. There is no doubt that much time and expense is wasted in the present system of estimating and that it needs a complete overhauling. As to whether or not the Quad City Exchange has solved the problem time will tell.

* * *

OUT of that New York suggestion to license builders has grown a general discussion of very wide trade interest.

"The proposal to license builders and superintendents, as a means of preventing disasters such as the recent collapse of a new tenement house in the Bronx, is open to serious question," writes D. Everett Waid.

"Its adoption would involve the creation of an additional piece of municipal governmental machinery which would be costly to operate. It would introduce one more complication in the already complex operation of building, and add another burden of cost to building.

"If the department organized to examine and license the many thousands of men engaged in the structural design and erection of buildings should be an efficient organization, it would inconvenience and hamper the building world seriously.

"If it should be less efficient than it ought to be, it would actually increase the dangers it is intended to obviate. Hundreds of poorly equipped constructors would secure badges of competency which would obtain for them greater opportunities than they would otherwise have to do bad work for the public.

"In the work of structural design and erection of buildings many thousands of people in New York City alone are engaged, and that with innumerable gradations and variations of functions. Any attempt to license would be more difficult and complicated to carry out on any just basis and would be most likely to result as class legislation of the most vicious sort."

* * *

IT is to be feared also that all the tremendous expense and limitation of liberty of vocation would accomplish no good end. The licensing of pharmacists, or barbers, or veterinarians, is a simple matter in comparison with undertaking to license all the architects, engineers, carpenters, masons, iron-workers, superintendents, inspectors, etc., who have

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

some part in making a building safe or otherwise. The whole problem is to insure safe building and the solution of that problem lies in fixing responsibility, first, for structural design in accordance with loads and stresses clearly defined in the building code, and, secondly, for construction with materials—brick, mortar, etc.—of quality clearly defined in the code.

"The building law is clear as to what may and what may not be done. What it lacks is provision to hold offenders responsible. In England it is possible ten years after a building has been erected to call the architect before the bar and fine or imprison him if his design is discovered to be faulty.

"Our statutes should fix such a degree of responsibility upon an owner that he will be careful at the beginning to engage competent persons to do his work. The law need not require him to hire an architect, but it should hold to strict accountability any one who assumes competency to design a building."

* * *

WHETHER the building be small or large, whether its designer be an architect or engineer or carpenter, that designer should be responsible for its safe design according to law and also for its execution in a safe manner.

"If the man who makes the structural design has under some circumstances no control over the erection, the law can at least give him access to the premises and require him under penalty to file a violation whenever the structural provisions of his plan are disregarded.

"When an owner for any reason has occasion to discontinue the service of his architect or engineer at any stage of the design or its execution, he could do so with consent of the Building Department upon complying with prescribed formalities which would place upon record the names of those who can be held responsible for the design and execution of a building at every stage.

"Stated in brief—so many persons have directing hands in the different stages of one building that when an accident occurs it is difficult to fix the responsibility. Examinations and licenses to establish ability are a doubtful recourse, but the law should make it possible to locate responsibility definitely and promptly and to assess severe penalties upon offenders against safe design and good construction."

* * *

THE *New York Record and Guide*, commenting editorially upon the proposition involved remarks:

"The verdict of the Coroner's jury in the case of the collapse of a tenement

house in course of construction in the Bronx, which finds two members of the firm of contractors and a building inspector guilty of criminal negligence and holds them for the action of the grand jury, has raised again the question of the advisability of licensing builders. In the past when legislation to this end has been proposed, as it was by the late Isaac A. Hopper, when he was Superintendent of Building for the Borough of Manhattan, both strong opposition and vigorous advocacy were developed.

"The question was found to be a highly complex one, both economically and legally. Then, as now, there were a number of good precedents for passing a license law for builders, with many reasons for so doing; and at the same time there appeared to be a real danger of doing an injustice to various interests. Upon close study it was also perceived by legal minds that it would be difficult to frame a bill that would pass the test of constitutionality. Moreover, as many trades and callings had been applying for the license privilege, the Legislature had set itself against any further extension of the list of restricted occupations."

* * *

THE new act for the registration of architects is not a license law," *The Record* points out. "It restrains no contractor, builder, engineer or owner from drawing building plans either for himself or others; but he must not use the title of 'architect' without being registered. In those States where laws have been passed forbidding anyone except registered architects to file drawings and take out building permits abuses have resulted. The New York law is drawn with a different intention. It is an educational rather than a restrictive measure, and is designed to raise the standard of the architectural profession without interfering with anyone in his usual vocation. If the right to use the initials of 'R. A.' (Registered Architect) after one's name is an honor worthy to be striven for by architectural students, as it is, the way has been prepared.

"Conceding that the building laws and the Building Department are primarily intended to protect the public from unsafe construction, there are yet occasions when they seem unable to prevent deception and detect incompetency. In view of this, a building official has suggested to the *Record and Guide* that the trade unions could advance their own and the public's interest if they should direct their members not to do things contrary to the Building Code. For example, if bricklayers in building exterior bearing walls would refuse to work in 'snap' headers and insist upon making

a bond between the front brick and the backing, as they know the law requires, they would be performing a public service.

"In their collective capacity trade societies owe the public certain obligations in return for the protection which the laws give them. One of these is the obligation to perform their work in a lawful manner so that life and property will not be endangered."

* * *

WHILE we concur most heartily in the suggestion that the unions lend the weight of their influence to a strict compliance with regulations we are inclined to think that a law requiring buildings of every class to be designed by and erected under the supervision of a licensed architect or structural engineer would furnish the most logical and permanent solution of the problem. As a general proposition it will be found that it is the operative dwelling or the single structure raised up without plans by the inexperienced order of contractor that comes to grief. And in every instance the cause is the same—plain evasion of or studious indifference to principles that date back to the day of Solomon.

* * *

SOME big public work is to get under way within the next few months, according to Director Datesman, of the Philadelphia Department of Public Works.

"A portion of the funds from the recent loan will become available shortly after November 1. In anticipation of this, the department will advertise for contracts to be paid for out of these new loan funds, aggregating more than \$1,700,000.

"Added to this will be Convention Hall and Free Library, which should amount to more than \$5,000,000 additional. This will be apportioned among bureaus as follows:

Bureau of Surveys	\$1,108,000
Bureau of Water	 565,000
Bureau of Highways	... 100,000

"The Bureau of Surveys is advertising in three relays, beginning October 1, for branch sewers and main sewers amounting to \$790,000; for seven bridges, which will cost \$168,000; for continuation of the Frankford Creek intercepting sewer, \$150,000.

"The straits in which operative builders have been placed, due to the lack of drainage facilities, have made it necessary to furnish these at the earliest practicable moment, so that the first expenditures under the loan funds will be for this purpose.

"Grading is another essential for real estate development. It is, therefore, in-

tended to grade such streets as can be done the present year, amounting to \$75,000, and to pave a few where underground structures have been placed, amounting to \$25,000.

* * *

BIDS were opened on October 3 in the Bureau of Water for new centrifugal pumps, improvement of the water supply at Queen Lane and at Lardner's Point pumping stations, costing approximately \$140,000.

"Later in October bids will be received for work in this bureau aggregating \$425,000, including a new \$35,000,000-gallon pump, building and pipe connections at Lardner's Point, about three-fourths of a mile of large pipe main in Oak Lane and new repair shop and booster house in Roxborough.

"In addition to this there was provided from the present loan funds the amount of more than \$500,000 for the purchase of materials and the payment of the city forces engaged upon the repair of high-

ways. This work is under way, and the money will be expended by the close of the year.

"The policy of following the highways, so as to repair small holes without waiting for big ones, results in large savings to the city, and promotes the convenience of the taxpayers.

"Owing to the lateness of the season, the work upon the Parkway, Northeast Boulevard and South Broad street improvements will not be advertised until after the first of the year. Work on these improvements, as a continuation of that now in progress, will begin when the spring season opens.

"Bids will be invited for the Free Library, followed by others for the Municipal Auditorium or Convention Hall, shortly after loan funds become available, in pursuance of the Mayor's policy to complete both of these monumental structures, so that the people may early realize their expectations as to these buildings."

EDITORIAL NOTES

The American Russian Chamber of Commerce, which has for its purposes the encouragement of a closer union in Industry, Commerce and Finance between Russia and the United States is about to issue a handbook of America which will be printed in Russia and which will offer special opportunities to American manufacturers wishing to enter into the Russian market. Particulars may be obtained by addressing the American Russian Chamber of Commerce, 60 Broadway, New York.

The 1916 electrical exposition will be held in the Grand Central Palace, New York City, October 11th to 21st. Among the features of the main floor will be a model laundry in operation. It will be planned with the view to the greatest efficiency and equipped with the most modern machinery. This exhibit should be interesting to architects, as it will give them valuable data as to the planning of a laundry and as to the space necessary for a properly equipped laundry.

The port of Philadelphia continues to shatter all previous records for export values, according to last month's shipping report issued by the Commissioners of Navigation, showing the total value of August exports to be approximately \$36,000,000. A feature of the local shipping business during the month was the unusual number of American vessels using the port, 31 arriving here flying the

American flag and 22 sailing for foreign ports. While big gains were made in the shipment of foodstuffs, the trade in war munitions was largely responsible for the phenomenal export increase.

For the second week of September thirty railroads earned \$13,302,575 gross, compared with \$12,081,028 in the same period a year ago—a gain of 13.41 per cent.

* * *

The failure of property owners to agree on contractors to make repairs in alleys adjoining their properties, as ordered by the Bureau of Health, has compelled the health officers to undertake the work themselves. Bids for the repaving of forty alleys are being received by Chief McCrudden, of Housing and Sanitation.

The holes that have formed prevent proper drainage of waste, and offer breeding places for flies and germs. It is estimated that the work will cost \$5,000. This will be assessed against the owners of abutting properties.

The Advance, published by the Corn Exchange National Bank, states:

"Facts, taken from the current record of the current month, are certainly eloquent of the tremendous advance in values which must follow the expenditure for public improvements authorized at the late election; and they should give courage to those who have so long and so earnestly endeavored to place Philadelphia in a position to take full advantage of the magnificent trade opportunities opening for the city with each succeeding month; for in these few examples cited there is direct offer by the Government of prices in excess of present assessments, positive refusal by owners to part with property at this advance over present assessments, and an equally positive refusal to sell by two of the owners at prices from one hundred to one hundred and fifty per cent. above the assessed valuation of the property in question. Here, certainly, is a substantial foundation in facts for the hopes of a greater Philadelphia and a Philadelphia made greater without unduly burdening the great mass of the people or taxing beyond the limit of endurance the vast army of our home-owning population."

Philadelphia is one of the busiest building centers in the United States and "The Guide" is the only medium that touches this golden field.

Are you aware, Mr. Advertiser, that this paper circulates in 5,000 offices, reaches every architect of any prominence in the East and the Secretary of every architectural club and chapter in the country?

HOLLOW TILE CONSTRUCTION

Development of a Structural Medium That Has Grown Into Widespread Popular Favor Within Recent Years—"Tapestry" Finish In Tile

TO trace the origin of hollow tile construction it is necessary to go back only so far as the early "skyscrapers," the first of the iron and steel framed office buildings, and the necessity for a fireproofing shell around the metal framework of these early buildings. These were of themselves a revolutionary type of construction, conceived and developed within the memory of men now not past their prime. The hollow, clay tile was developed as a light-weight insulation and fire protection for the iron frame of these pioneers among the tall office buildings,—a by-product of the modern office building, so to speak.

The completely constructive building materials may be counted on the fingers of a hand; wood, stone, brick, concrete, hollow tile. The evolution of a new building material is an epoch-making thing. The use of wood, stone and brick go back through all the annals of civilization, past its earliest records. The ancient civilization which did not have stone available for building purposes, made brick and built with it. Brick was the building material for the ancient Assyrians. While we have seen a wonderful development in the use of concrete, it is really a very ancient material, known and used in very early times. Terra cotta is generally used as a facing material and does not properly come in this list.

Hollow tile, alone, of these materials, has been developed during the last few decades, and several reasons account for its popularity. The obvious economy of using a hollow tile a foot square, or thereabout, in place of perhaps fifteen or more smaller units, lies not only in the shorter time in which it may be laid in the wall, but also the saving in handling the larger unit. Any saving in the actual amount of clay used is important only as it results in an accompanying,—and equally desirable—lack of weight. Moreover, from this economy of material and lack of weight has developed the basic principle and greatest positive advantage of hollow tile as a building material,—the dead air spaces which make an insulation in the wall against both heat and cold, fire, or storm.

A seeming coincidence lies in the fact that just as hollow tile was being applied to building purposes in this way, the building public began to realize the essential importance and desirability of a comparatively inexpensive and at the

same time commercially practicable type of fire resisting construction.

In its early manufacture hollow tile was made in very simple designs and with few patterns. But as the tile has come to be more and more used in dwelling construction there has been a growing tendency to improve its design by details giving a more thorough insulation and better bound in the wall; to provide designs for special places such as door and window openings,—jamb and sill, floor joists, corners, etcetera, to lessen the labor and trouble on the work, to improve the technical means of its employment and to reduce the cost to the owner.

The several standard makes of hollow tile have been accepted by building departments as desirable building materials, and many local factories manufacture a good product. Each type has its own peculiar advantages in design and manner of laying, and each has its own special forms designed for special positions. It is extremely interesting to follow the peculiar adaptations which have been worked out to fill special conditions, as for instance for the jamb and sill for window openings; methods of reinforcement for lintels and wide openings; to give a good bearing for floor beams; to form corners; to set partitions; to break a continuous joint through the wall; methods of breaking joints and bonding the tile in the wall.

Of especial interest may be mentioned the very practical types of fire resisting floor construction. The time will come,—and it is not far distant,—when it will be considered necessary to put an effective fire stop between the basement, with its possibilities of over-heated furnace, badly constructed hearth or flue, and the living quarters of the family, though there is no indication that the time will ever come when we shall consider anything else so satisfactory and beautiful to live with as a well-finished hardwood floor and woodwork. When a house is built of fire resisting material people will feel justified in putting more beautiful wood into its finishing.

The possibility of applying stucco and plaster directly to both the exterior and the interior face of the wall simplifies construction and reduces expense, though in many cases furring is applied to the inner surface.

Hollow tile requires essentially a ten- or a twelve-inch wall as a minimum for residence work, as compared with the six-inch wall of timber construction. With modern compact building every inch of space is expected to bring its return in value, and hollow tile is designed to give not only bearing strength and the protection expected from a wall but in addition the fire resistance and the insulating qualities of greater value than the space occupied. Estimates vary as to the relative cost of tile and timber construction. Ten per cent additional cost for a fire-proof construction is an estimate often given. In special cases and conditions it may run considerably less and in others it may exceed ten per cent, depending on the construction, labor and transportation conditions. We are told the contractor's uncertainty as to the use of tile and its results sometimes accounts for his high estimate. He prefers to build in the more usual way, and figures accordingly, with an allowance to cover suspected trouble.

Among the later developments is a tile with a "tapestry" or finished surface, which does away with the necessity for a brick veneer or coat of stucco. This, if generally adopted, would again have a revolutionary tendency on architectural effects. Scale is one of the most important elements with which the successful architect works his spell. The eye accepts the small unit of brick as an established standard. A unit as much larger as the tile provides will set a different scale and make different requirements.

The architectural possibilities of the plain stucco and cement surface have hardly been touched as yet. The very facility with which it is worked, its lack of limitations, has made its early use either commonplace or in imitation of other materials. Spanish colonial stucco work in Mexico was the inspiration for the very interesting buildings in the permanent group erected at San Diego for the exposition which charm visitors, and show some of the various phases of its possibilities as applied to structures both ornate and simple.

Fundamentally the influence exerted by the fireproof and the hollow tile house is manifest in the simpler general lines, and more especially in the grouping of windows. Special construction is required for each opening. When several windows are required in the wall of a room, it is manifestly simpler for them to come together in one bank, saving the labor of the several different openings in the masonry where one opening can be made to serve the same purpose. This is resulting in a distinctive character of exterior treatment capable of infinite variation under architectural handling—*Keith's Magazine*.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Church and Sunday School, Fifteenth and Locust streets, Philadelphia. Architects, Stuckert & Co., Crozer Building, Philadelphia. Owners, First Reformed Church, Rev. E. R. Appenzeller, 2117 West Ontario street, Philadelphia. Stone, 1 story, 75x130 feet, slate roof, steam heating, electric lighting. Plans in progress. Architects will take bids in about one month.

Shop, 933-35-37 Spring street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner's name withheld. Brick, 2 stories, 45x75 feet, slag roof, electric lighting. Architect taking sub-bids on all lines.

Church and Sunday School, Third and Tabor road, Philadelphia. Architects, Duhring, Okie & Ziegler, Bailey Building, Philadelphia. Owners, Olney Presbyterian Church, Rev. W. H. Wells, 222 Tabor road, Philadelphia. Stone, 1 and 2 stories, 52x90 feet and 65x95 feet, slate roofs, steam heating, electric lighting, cabinet work, hardwood floors. Plans in progress.

Residences (12), north side of Rusecomb street, between Fourth and Fifth streets. Architect, J. Elvin Jackson, 727 Walnut street, Philadelphia. Owner, Morris Bleiden, 5048 North Fifth street, Philadelphia. Brick and stone, 2 stories, 44x16 feet, slag roof, hot water heat, tile and hardwood floors, electric lighting, parquet floors, cabinet work. Owner taking sub-bids on all lines.

Garage, Malta and Tioga streets, Philadelphia. Architects, Neubauer & Boyd, 1118 Chestnut street, Philadelphia. Owner, John M. Kennedy, Jr., 1000 Chestnut street, Philadelphia. Brick and steel, 1 story, 60x102 feet, slag roof, cement floors. Architects taking bids. Freund Const. Co., Bulletin Building, are figuring (only bidders).

Forging Plant Building and Tunnel, Frankford, Philadelphia. Architect, private plans. Owners, U. S. Government, care of Col. Geo. Montgomery, Frankford Arsenal. Brick and reinforced concrete, 1 story, 100x204 feet, felt or asbestos roof, cement and maple floors, metal lath and sash, waterproofing. Owners taking bids, due October 16th at 2 P. M. The following are figuring: Warren-Moore Co., Commercial Trust Building; E. F. Fonder, Land Title Building; W. W. Anstine & Co., 1218 Filbert street; H. H. Wehmeyer, 1004 Lehigh avenue; Wm. R. Dougherty, 1610 Sansom street; Thomas Reilly, 1616 Thompson street; People's Bros., Commercial Trust Building; Austin Co., Transportation Building; Ketcham & McQuare, 1029 Brown street; Wm. Steele & Sons, 1600 Arch street; F. W. Van Loon, Denckla Building; Mitchell Bros., Philadelphia, and Connors Bros. Co., 64 West Eighty-eighth street, New York City.

Factory (add.), Eighteenth and Washington avenue, Philadelphia. Architect, Werner Trubower, 1420 Chestnut street. Owners, John Wyeth & Bro., Inc., on premises. Brick, steel and concrete, 1 story, 28x64 feet, slag roof, maple floors (heating electric work and sprinkler system reserved.) Architect has received bids.

Warehouse, Stillman and Jefferson streets. Architect, private plans. Owners, Wills-Jones Co., 1507 North Twenty-sixth street, Philadelphia. Brick, steel, reinforced concrete and terra cotta, 3 stories, 90x90 feet, slag roof, cement floors metal sash, waterproof. Owners

have received bids. (Electric work, heating and plumbing reserved.)

Fire Station (remodeling Casino), Oak Lane, Philadelphia, \$22,000. Architect, Louis E. Marie, City Hall, Philadelphia. Owners, Department of Public Safety, City Hall, Philadelphia. Consists of remodeling present building and new rear addition, frame, 2 stories, shingle and composition roof, electric lighting. Plans in progress. Will take bids in about ten days.

Office Building, Nicetown, Philadelphia, \$60,000. Architect, Thomas B. Lippincott, Stephen Girard Building, Philadelphia. Owners, Midvale Steel Co., Widener Building, Philadelphia. Brick, reinforced concrete and terra cotta, 6 stories, 170x50 feet, slag roof, steam heating, electric lighting, composition, concrete and mastic floors, metal lath, steel sash, fire doors, vacuum cleaners, elevator, waterproofing, marble and terrazzo work. Owners taking bids, due October 12th at noon. The following are figuring: Barclay White & Co., Perry Building; Irwin & Leighton, 126 North Twelfth street; Pomeroy Const. Co., 1609 Ransstead street; F. W. Mark Const. Co., Finance Building; Charles McCaul Co., 1715 Sansom street; George A. Fuller Co., Widener Building.

Store and Apartments (alt. and add.), 5340 Germantown avenue. Architects, Neubauer & Boyd, 1118 Chestnut street, Philadelphia. Owner, John F. Conlin, 12 West Willow Grove avenue, Philadelphia. Brick and stone, 2½ stories, 18x90 feet, hot water heating, combination lighting. Architects taking bids, due October 12th. The following are figuring: John Dear, 4544 Greene street; R. M. Peterson, 5820 Wakefield street; Wm. J. Cowell, 943 East Cheltenham avenue; Harry J. Schultz, 232 West Mt. Pleasant avenue; George A. Boyd, 5012 Schuyler street, all of Philadelphia.

Garage, Fifty-second and Wyalusing avenue, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets. Owner, James Egnal, 4146 Leady avenue. Brick and stone, 1 story, slag roof, steam heating, electric lighting, marble work, cement floors, skylights, gasoline storage system. Plans about completed. Owner will take bids in one week.

Factory, 600 to 612 North American street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner's name withheld. Stone, steel and brick, 2 stories, slag roof, steam heating, electric lighting, cement and yellow pine floors, skylights. Architect will be ready for bids in about ten days.

Residences (10), Haines and Ogontz avenue, \$30,000. Architect, private plans. Owners, Schwingle Bros., 2637 West Hagert st., Philadelphia. Stone and plaster, 2½ stories, 16x56 feet, tile roof, hot water heating, combination lighting, hardwood floors. Owners are sub-letting all contracts. Work about to be started.

Residences (10), Haines street and Ogontz avenue, \$30,000. Architect, private plans. Owners, Gehlaus & Dallas, 4715 North Broad street, Philadelphia. Stone and plaster, 2½ stories, 16x56 feet, tile roof, hot water heating, hardwood floors, combination lighting, tile work. Owners are sub-letting all contracts. Work about to be started.

Residences (7), Forty-sixth and Locust sts., Philadelphia. Architect, private plans. Owner, James N. Mitchell, Forty-sixth and Mar-

ket streets, Philadelphia. Brick, 3 stories, 16x54 feet, slag roof, hot water heating, hardwood floors, combination lighting, tile work. Owner will take sub-bids in about one week.

Mill Building (add.), southeast corner of Butler and Janney streets. Architect, Carl P. Berger, South Penn Square Building, Philadelphia. Owners, Belmont Packing and Rubber Co., Butler and Sepviva streets. Brick, steel and stone, 1 story, 76x70 feet, slag roof, maple floors, metal sash, fire doors. Architect has received bids.

Church Fifty-seventh and Baltimore avenue, Philadelphia. Architects, E. E. Hendrickson and Day & Klauder, 925 Chestnut street, Philadelphia. Owners, P. E. Church of the Epiphany, Rev. W. N. Parker, Sherwood. Stone, 1 story, 40x105 feet, slate roof, steam heating, electric lighting cabinet work. Architects taking bids. The following are figuring: Frank E. Wallace, 1220 Chancellor street; Jacob Myers & Sons Co., Witherspoon Building; F. L. Hoover & Sons, 1023 Cherry street; John Duncan, 920 Walnut street; R. C. Ballinger & Co., 218 North Thirteenth street; Thomas C. Trafford, 1613 Sansom street; George & Borst, 277 South Eleventh street.

Residences (70), Widener avenue and Nedro avenue at Broad street. Architect, private plans. Owners, Marolin & Bloch, 203 South Fifth street, Philadelphia. Brick, 2 stories, 16x52 feet, slag roofs, hot water heating, electric lighting, hardwood floors, tile work. Owners will take sub-bids in about one week.

Factory, Twenty-eighth and Fletcher sts., Philadelphia. Architect, Frederick T. Uezzell, 147 North Third street, Philadelphia. Owners, Cohlman & Cutler Co., Inc., 2522 Dauphin street, Philadelphia. Brick, 3 stories, 55x110 feet, slag roof, steam heating, electric lighting, concrete floors elevator, fire doors, steel rolling doors, ventilators. Architect has received bids.

Garage, Stenton and Spring lane. Architects, Zantlinger, Borie & Medary, northeast corner of Fifteenth and Walnut streets. Owner, Isaac Starr, Stenton and Spring lane, Chestnut Hill. Stone, 2 stories, 24x48 feet, shingle roof, hot water heating, electric lighting. Architects taking bids, due October 13th. The following are figuring: Stokes Bros., 6723 Musgrave street; H. H. Burrell, 206 South Quince street; Wm. H. Eddleman & Sons, 453 Green lane, Roxborough, Philadelphia; J. Sims Wilson Co., 1125 Brown street; George B. Roth & Sons, 230 East Graver's lane, Chestnut Hill; Pringle Borthwick, 8018 Germantown avenue; Archibald McTavish, 1513 Pine street.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

A Prominent Architect says:

"The Conceal-O is the ideal method for connecting gas reading lamps, desk or piano lamps, portable gas heating stoves, chafing dishes, gas irons, etc., where appearance counts as much as utility"

A Conceal-O Plate should be placed in the bathroom, bedroom, living room, library, dining room and kitchen of your new houses.

Let us co-operate with you.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 42

PHILADELPHIA
October 18, 1916

As The Editor Sees It

THE collapse of a building at 188th street and Marion avenue, in New York City, has given rise in that city to serious discussion touching the question of how to deal in the most effectual fashion with the "jerry" builder. William H. Kraemer, who claims eighteen years' practical experience as a mason and building superintendent, contributes an interesting note under the heading, "Why Buildings Collapse," to the *New York Times*:

"The collapse of the building at 188th street and Marion avenue brings out a condition which needs serious attention," writes Mr. Kraemer.

"There are quite a number of so-called wall-bearing wooden beam construction buildings erected in large cities continuously which are not safe structures, due to various reasons, such as speculative builders trying to beat the high cost of labor and materials by rushing the work and slighting specifications and Building Code, lack of inspection on the part of owners and authorities, and, in many cases, utter lack of experience on the part of the bidder.

"On speculative work any man or group of speculators can organize what is called a building company. The usual method is to purchase ground and arrange for a loan, buy a set of plans, and proceed with the letting of sub-contracts, peddling them to the lowest bidders and driving hard bargains. In most cases the construction company does its own mason and carpenter work—this, of course, is done as cheap as possible; mortar usually is of a poor quality, consisting of sand with about half of the proportion of lime and cement called for in the code; lime often is freshly slaked and used before it has had time to cool and season. The brick are generally laid without wetting, and the result is no tensile strength or bond between mortar and brick.

"When a story height is reached the beams are slapped on green walls, and sometimes another story is erected in eight hours thereafter. I have seen numerous cases where the wall anchors that secure walls to floors were omitted, purely due to negligence. On a steel skeleton construction the risk is much less, as the frame will hold the building together even if carelessness is used on mason work.

"There are hundreds of so-called contractors who have obtained their building experience in a clothing shop or behind a pushcart. This condition can be remedied by legislation compelling an examination for qualification as builder, strict inspection and impartiality by the Building Department, and more superintendence by architects instead of merely drawing up and selling plans and specifications. Unless we have reforms like these the high cost of material, labor, and the speculator-contractor's desire to make big profits and quick turnovers are going to injure the building trade even more than they already have done."

* * *

ALL of which would seem to bear out certain views advanced in these columns from time to time regarding the "irresponsible" type of operative builder,—the fellow who without previous training in the building field romps into it on the theory that the house that holds together until it has found a purchaser is everything that an operative dwelling should be. The bureau of building inspection can do but little to check this class of building, first, because the regulations are weak and inconclusive and, second, because the force of inspectors placed at its disposal is pitifully inadequate numerically to deal with the problem. The remedy would seem to lie in a careful revision of the regulations applying to this class of building together with drastic punitive measures

for those who attempt to evade them.

As a class, here in Philadelphia, the operative builders are a credit to the craft. It is the new and untrained foreign element, coming into the field from other occupations, that is responsible for the shoddy order of operative building.

This class cares nothing for regulations, regarding regulations generally as something to be evaded. The structures they erect commonly "go to pieces" within five years. They are saved from collapse, as a rule, by the adjoining party walls, it being a custom of the type of builder we have in mind to build a single house or a pair of houses here and there, rather than to operate on a large scale.

* * *

ONE of the advantages of the new joining system in New York is that it restricts the building of garages to certain prescribed sections of the city.

Before the adoption of the zone plan the garage was free to locate in any part of the city. One good residential block after another has been progressively invaded by the garage, with the result that the value of the block for residential purposes has been largely destroyed. All this waste has been stopped by the zone resolution. Already a score or more of good residential blocks have been saved from the garage blight. The garages that would otherwise have been located in these residence sections have found more suitable locations.

Explaining the value of the new law, Robert H. Whitten, Secretary of the Committee on City Plan, said:

"The zone resolution permits in a residence district the erection of a private garage for not more than five automobiles on the same plot with the residence which it serves. It permits in a business district a garage, either public or private, for not more than five motor vehicles.

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

"With the approval of the Board of Appeals, however, a public garage will be permitted in any block in a business district in which there existed a public garage at the time of the passage of the zone resolution. This will permit the creation of certain garage blocks in the business districts. Except as above specified, public garages must be located in the 'unrestricted district.'

"The unrestricted districts are in general those in which a factory or industrial development is anticipated, but in small areas have been left 'unrestricted.'

"The space available for the location of public garages under the zone plan is well distributed and adequate for future needs. It may be possible, however, that as the demand for garage space increases it will be necessary in a few localities to provide additional unrestricted areas. This can be done at any time by the Board of Estimate either on its own motion or on petition.

"Such action can, however, only be taken after public notice and hearing, and if the owners of 20 per cent. of the frontage affected protest against such change it can only be made by a unanimous vote of the Board of Estimate.

"An automobile salesroom where cars are kept for sale or for demonstration purposes only may be erected in any business district. An automobile repair shop must locate in an unrestricted district. The zone resolution does not affect existing garages or those for which plans were on file on July 25, 1916."

* * *

PORTLAND, ORE., has prepared and issues in printed loose-leaf form standard specifications for all material and methods to be used in all structures and work carried on under the city's supervision. These specifications do not, of course, refer to any particular work, but are strictly general in character and are issued unbound to any contractor on application. This plan simplifies the preparation of specifications on new work to such a degree that but little more than detailed drawings is necessary.

The labor of getting out specifications is still further simplified by photographing both the text and the drawings, so that the space covered and the cost of producing one or two dozen copies are a minimum. This is made feasible by typing the specifications, single space, on a sheet about twice letter-head size, and then making an 8x10-inch negative of the large sheet. The drawings are likewise photographed on 8x10-inch plates; and even though certain minor details and figures are lost in process of reduction, it is believed that for estimating all the data really needed will be legible.

For construction purposes, of course, blueprints of the original drawings are used.

Under this system the amount of text accompanying the drawings, even on extensive work, is notably slight, and this is because wherever materials or methods are involved which are covered in the list of standard specifications already referred to, the page and paragraph of the references are all that need be given to make the standard list a part of the contract covering the particular work in hand.

Photographs of specifications for small jobs are printed on heavy velox paper, and where more extended reference is anticipated a special cloth paper is used. In either case the collection of photographs of drawings and text is fastened together inside a cloth blueprint cover, on the outside of which the title and general information are printed.

The plan has been used for some time by Philip H. Dater, city engineer of Portland.

* * *

NEWARK, N. J., is busy with a movement to compel the man who owns a vacant lot within the city boundaries to keep that lot in a slightly and attractive condition.

"Why shouldn't cities pass ordinances compelling vacant lot owners to keep their property in a condition of cleanly sightliness and order, to be prescribed and standardized?" asks *Realty*.

"Why should Jones, on the corner of Spruce street and Avenue Beautiful invest \$20,000 in a house and lot and keep it in good order—a pleasure to the eye of every passerby—and Brown, who sold him the lot and who owns the remainder of the block, be permitted to maintain weed-choked, unsightly and unsanitary nuisances alongside of him and his neighbors? The public has a direct interest in the proper management of every piece of real estate within the city limits. The owners of improved property alongside of vacant property have an interest therein. It is an advantage to the vacant lot owner to dress his property and so maintain it as to make it attractive and saleable, and so to use it as not to impose disadvantage or a nuisance upon adjoining property improved or unimproved. Owning real estate entails an obligation; it is not a license to do as you please with it or permit Nature to do as she pleases with it.

"Every lot in every incorporated village, town or city should be kept in a condition to make all streets community parkways—a pleasure to the senses of all city folk. That would be one way of making life in cities popular, increasing traffic in lots and houses, and beautify-

ing and rendering more healthful what is now often unsightly and insanitary.

"Make every vacant lot a picture of green grass, trees, shrubs or flowers, and the days of the realty man will be long and profitable, and his name and works will be blest."

* * *

Here is an idea that is not without engaging qualities. A campaign, here in Philadelphia, aimed at the hideous and defacing billboard nuisance and the weed-grown rubbish-strewn vacant lot would strike the popular chord.

We had an instance of the commercial value of neatness brought to our attention here recently. A West Philadelphia real estate man had for sale a beautiful old place which having long been idle had begun to show signs of neglect. Purely as an experiment the agent had the grounds slicked up, the grass trimmed, the weeds removed, the fences repaired and the porches swept and scrubbed. Within a month after these changes were made the place found a buyer. How many idle properties remain tenantless because of similar inattention present an interesting theme for conjecture.

* * *

IT'S an old saying in the trades that "everybody knocks the contractor."

Well, here's a boost from *Knickerbocker Comments*. It is called "A Toast to the Contractor," and runs like this:

"He deserves a double toast—one for his burdens, the other for his mission and the larger meaning of work.

"He is a peg on which every one connected with a building enterprise wants to hang his troubles—and his delinquencies.

"He is the wizard whose reading of plans and specifications must be free from error, even if they are not.

"He's the wizard who must be able to foresee unforeseen circumstances, who must prevent unpreventable interference with his job.

"He is the wizard who must put up his plants in a temporary location with all the efficiency of a permanent establishment.

"His mission is to do 'real constructive work.' It is symbolical of the right kind of enterprise and activity. It is the contractor who turns projects into realities. He stands for the 'realization' of things planned, which is the essence of all achievement.

"Here's to the contractor, the man who literally built up the country!"

And the contractor deserves every word of it.

EDITORIAL NOTES

A Western Congressman, who has been building a very handsome and spacious residence, was asked by one of his colleagues how the house was progressing. "It is all completed," was the reply. "All I need now is a parrot." "A parrot?" queried his friend. "Yes," replied the Congressman, "I want a parrot. I want the bird to roost over the front door and just say 'Fool! Fool!' every time he sees me come up the walk!"—*Washington Post*.

* * *

Officers were elected and delegates to the annual convention of architects were chosen at the forty-eighth annual meeting of the Philadelphia Chapter of the American Institute of Architects, held at the Meridian Club. The officers elected are:

President, Horace Wells Sellers; first vice-president, John P. B. Sinkler; second vice-president, Emlyn L. Stewardson; secretary, Edward A. Crane; recorder, Arthur I. Meigs; treasurer, Edmund C. Evans; Executive Committee, Edmund B. Gilchrist, H. Bartol Register, Frank R. Watson.

Delegates to the annual convention of the American Institute of Architects, to be held at Minneapolis on December 6, 7 and 8: Edward A. Crane, ex-officio; C. L. Borie, Jr., D. K. Boyd, Albert Kelsey, J. P. B. Sinkler, George I. Lovatt, A. I. Meigs, John Hall Rankin, Edgar V. Seeler, Charles Z. Klauder. Alternate delegates, L. V. Boyd, A. H. Brockie, E. C. Evans, T. M. Hastings, C. A. Zeigler, G. B. Page, W. L. Plack, E. L. Stewardson, F. R. Watson.

* * *

Members of the Master Builders' Exchange, about 250 of them, were the guests of the Charles Warner Company, at its Cedar Hollow plant, near Phoenixville, on Thursday last, and everybody who accepted the hospitality of the Warner Company had a glorious time.

It has been the custom of the Exchange for some years past to give an automobile run about this season of the year, to some point of interest in the neighborhood of Philadelphia. Having this in mind, the Warner Company times its invitation to coincide with the usual Fall outing of the Exchange.

The start was made from the Exchange between ten and eleven o'clock, each machine being sent off as soon as loaded, and left to its driver's discretion as to the route to be taken. Some went by way of the West Chester Pike and

Paoli, others by the Lancaster Pike, and others by still other routes. All arrived between twelve and one o'clock, however, each man bringing his appetite with him.

As soon as a car arrived, its occupants were welcomed by President Warner, or some other official of the company, and escorted to a huge tent at the western end of the plant, where luncheon was served.

After luncheon, the visitors were taken in groups through the plant where every process in the manufacture of lime from the quarry to the finished hydrated product in bags ready for use, was shown and explained, the affair winding up with the explosion of a ton and a half of dynamite in the large quarry opposite the principle kilns. Drilling of the rock in preparation for this "shot," as it is termed, occupied two weeks' steady work with huge pneumatic drills.

This huge mass of dynamite was exploded at 3.30 o'clock and loosened thousands of tons of rock.

Just before the visitors began leaving, at the suggestion of President George J. Watson, of the Builders' Exchange, three rousing cheers and a vote of thanks were given the Warner Company.

In Russia the stoves are made of brick and are so built in that the family sleeps over the top in order to keep warm.

In China there is a rough clay stove

made especially for the rice kettle. These stoves sell for a few cents. The Chinese also have a clay "bed stove," shaped something like a curled-up cat and used like an American water bottle.

In Germany they have stoves made of porcelain, curiously decorated. Porcelain stoves hold the heat a long time.

In Italy they use an earthen hand warmer with good results.—*Clay Magazine*.

It is reported that the forthcoming exhibition of architecture and the allied arts, in Boston, will be held in surroundings worthy of its architectural excellence. While the exhibitions of later years have been of high merit, the inability to secure adequate exhibition rooms robbed these presentations of much of their dignity.

It is now announced that a joint exhibition under the auspices of the Boston Architectural Club, Society of Arts and Crafts, Boston Society of Architects and the Society of Landscape Architects will be held by the courtesy of the Massachusetts Institute of Technology on the main floor of the Rogers Building, in Boston, during November.

Information as to rules governing exhibits, prizes, etc., may be obtained by addressing the secretary of any of the co-operating societies. Charles Collens is chairman of the joint committee.

Second Class Matter

Irving Dillon.....Editor

The 25th Annual Edition of Hendrick's Commercial Register of the United States for Buyers and Sellers, which has just been issued, rounds out a quarter of a century of usefulness by this standard publication. The work is especially devoted to the interests of the Architectural, Contracting, Electrical, Engineering, Hardware, Iron, Mechanical, Mill, Mining, Quarrying, Railroad, Steel and Kindred Industries, containing about 350,000 names and addresses, with upward of 45,000 business classifications. Full lists are included of producers, manufacturers, dealers and con-

sumers, listing all products, from the new material to the finished article, together with the concerns handling these products, from the producer to the consumer.

There are 1,512 pages of text matter and the Index of Contents numbers 149 pages covering over 50,000 trade references. The list of trade names, brands, titles of identifications, etc., is published for the first time and numbers 202 pages. This list furnishes ready reference for purchasing agents and prospective buyers to distinctive products manufactured by firms listed in the work.

various departments of trade and industry are almost uniformly favorable, and indications point to continued active conditions.

"The labor situation, as referred to by us last month, still appears to be unchanged and is serious. Labor is restless and its continued shifting is lowering the efficiency of many plants, thus entailing loss to manufacturers. There is a noticeable scarcity of female help available for mill work.

"Higher prices and marked scarcity of desirable merchandise to meet the unprecedented retail demand, continue to be the outstanding phases of the hosiery and underwear industries. Production is being seriously hampered by inability of many mills to get adequate help.

"From special reports received from a number of concerns regarding business conditions in Central and South American countries, and the possibilities of extending our export trade there, we are informed that at present market conditions are very favorable for the United States, and if expansion of our trade is pushed in logical and practical ways, it is likely that our merchandise can be exported in larger amounts than ever before to those countries, and permanent customers made of the buyers."

WILLIAM L. PRICE, ARCHITECT, DEAD

Picturesque Figure in Art Life and Designer of Wide Reputation

William L. Price, one of the most picturesque figures in the art life of this city and a member of the firm of Price & McLanahan, architects, designers of some of America's palace hotels, died at 4 o'clock Saturday morning at his home in Rose Valley, near Moylan.

Mr. Price was born in Philadelphia in 1861 and received his early education at Friends' School, Westtown, and later went to Swarthmore College. He entered the architectural field with the firm of Addison Hutton, and was later identified with Furness & Evans. Leaving their employ, he commenced to practice alone, and confined his talents to the designing of some of the finest suburban residences in this vicinity.

After meeting with marked success in his career he looked for a wider development of his artistic aspirations, and in 1900 established, with his future partner, M. H. McLanahan, the colony at Rose Valley, which soon became a center for artists, writers and craftsmen. Several of the old Colonial houses were restored and the community has now become

a favorite residential section. Mr. Price always made it his home and regarded it as one of his best achievements.

In 1902 Mr. Price became associated with Mr. McLanahan, and more ambitious work followed the partnership. Together they designed the Marlborough-Blenheim and the Traymore Hotels, at Atlantic City, and the Hotel Clarendon, in Florida; the Pennsylvania Railroad stations at Allegheny City, Washington, Pa.; Fort Wayne, Ind., and numerous other stations on the Pennsylvania lines west of Pittsburgh. Some of the residences designed jointly are those of William C. Scott, of Merion, and Frank H. Wheeler and Frank H. Van Camp, of Indianapolis.

Among the residences which Mr. Price designed is the Alan Wood mansion at Conshohocken and the homes of John O. Gilmore, John P. Gest, Samuel Croft and Edward W. Bok, and many others in the suburban districts of Philadelphia.

TRADE CHANGES AFTER WAR.

Federal Reserve Bank Holds End of Conflict Will Not Have Disastrous Effect.

In an interesting summary of business conditions in this section, the Federal Reserve Bank of Philadelphia brought out two important points touching trade prospects after the war and this country's chances for permanent business in South America. It was asserted that munition manufacturing concerns are anticipating the end of the European conflict and arranging to manufacture commodities in time of peace. This fact, the report said, is adding to the feeling that the end of the war will not have the disastrous effect on industries which some have feared. The report added:

"The buying power which has developed throughout the country tends to keep general business on a strong basis; reports from the

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 14, 1916.—Sealed proposals will be opened in this office at 3 P. M. November 27, 1916, for the construction of the United States post office at East Orange, N. J. Drawings and specifications may be obtained from the custodian of the site at East Orange, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Electric Convenience

Very often you want a little something to eat or drink in a hurry, or maybe one of the family is taken sick during the night and something is needed quickly. An Electric Chafing Dish, Stove or Water Heater would supply you with whatever you wanted in a few moments, economically and satisfactorily. This is just one of the many electrical conveniences.

Fire Resisting Roofing Tin

Shingle Roofs are Conflagration Spreaders

The National Board of Fire Underwriters condemned the use of Wooden Shingles for roofing. Many prominent American cities now require use of fire resistive roofing within their city limits.

Our "Merchant's Old Method" brand is the best fire resistive roofing tin on the market. Open Hearth Copper Bearing Base. Send for sample and prices.

VOLUME XXXI
Number 43

PHILADELPHIA
October 25, 1916

As The Editor Sees It

A GAIN—the tax question. Whether 'tis nobler far to suffer the slings and arrows of an electorate that wants the best of everything in its municipal housekeeping but limps painfully when it comes to paying the freight or to make such a sensible equalization of taxable values as will net the city a fixed and ample revenue and end for some years to come, at least, a recourse to loans that serve simply to delay the inevitable.

The preternaturally owlsh persons who compose the Board of Revision of Taxes are in some haste to point out that the plan of equalization, advocated by Mayor Smith, far from increasing perceptibly the present taxable values, would actually result in materially reducing these, thus defeating its own object.

But, on the other hand, we have the word of Mr. Frederick A. Somers, for the statement that this hasty affirmation of the gentlemen of the Board of Revision is little short of preposterous; that a change from the present antiquated and unscientific system could hardly fail to be an improvement and that a system based on a carefully reckoned unit of values would undoubtedly increase measurably the city's revenue from the source without imposing individual hardships at any point.

This view coincides with those expressed on a number of occasions in these columns by the editor of THE GUIDE, who has been, for many years past, a close and studious observer of the general tendency of municipal taxation. There can be no refuting the fact that under the present system of assessment the small dwelling has been carrying more than its share of taxation as compared with the larger and more centrally located structure.

Unimproved ground, too, in the opinion of men who have followed the sub-

ject, intelligently, has been assessed, under the existing system, with a surprising measure of leniency.

President Caldwell, of the Corn Exchange National Bank, cites a number of altogether typical cases of tax inequalities in the current number of *The Advance*. Most anybody at all familiar with the subject is able to cite cases as convincing. The Operative Builders, at a meeting held at the Bingham recently, came out strongly for a change in the system of rating unimproved ground.

Builders, architects, building material men generally, have a legitimate interest in this subject, for the reason that under a too-lenient system of assessing idle ground speculators have been enabled to hold large plots, strategically situated, to the disadvantage of the growth of certain sections of the city and to the serious embarrassment of normal operative activity.

Mayor Smith is undoubtedly in the right in his views as to the necessity for a change from the present system and will be backed by public sentiment in his demand for an investigation looking to an exhaustive inquiry into every phase of the questions at issue.

One of the most serious of the many objections to the present system has been that under it assessments are arrived at by men whose training has not been of a sort to familiarize them with values. With a few exceptions,—notably, Mr. Gratz, of the Board of Revision, who is admittedly an authority,—the assessors are men who have gained such slender knowledge as they have of property values from the realty transfers—a hopelessly misleading source of information as real estate men know.

Here's hoping that the Mayor will go through with his plans for an inquiry into tax methods and that out of its findings may issue a scheme of com-

puting values equitable to all concerned—the city included.

* * *

W HILE we are on the subject of municipal management we want to take occasion to remark an altogether sensible, practical and timely suggestion advanced by *The Evening Bulletin* with reference to the city's district offices. As most citizens are probably aware, the city maintains at various locations throughout its 48 wards branch tax offices, supply stations, district offices for the highway engineers, branch water offices, quarters for the surveyors, etc. It is now proposed to establish a series of district offices for the probation officers of the Municipal Court. Hence *The Bulletin* suggestion which is, that the city take steps to erect, at points suitably located, district buildings large enough to house every class of city offices necessary to a given stretch of territory including the magistrates, whose offices are, as a rule, disgracefully dingy, cramped and uninviting. At these "focal centres" *The Bulletin* very properly contends it would be possible to quarter decently and commodiously the various branch activities now scattered at a neat saving annually to the city.

The idea is an excellent one, and we hope will have the consideration it deserves.

* * *

W ILLIAM C. STANTON, of the Comprehensive Plans Committee, who, with Mrs. Stanton, left early in June for a tour to Japan, China and the Philippines, has returned to his desk in the Department of Public Works with a fund of architectural data and a message to American folk from Wu Ting Fang, former Chinese Ambassador to the United States.

Mr. Wu, who was a keen and most

amiable critic of American manners, suggested we live too rapidly here and said mournfully he will be alive and happy long after all his good friends in this country are dead. He was found living placidly and in great simplicity as a private citizen in Canton, where he labors all day in his garden.

"I cultivate the philosophies and the intimacy of flowers," said Mr. Wu, "and eat only vegetables. Therefore I have a peaceful mind and shall live to be a hundred and fifty years old. Tell my friends in America they work too hard for things that do not matter. Tell them to cultivate gardens. To sit near a little bush in spring with a book by a wise author—such as our Chinese philosophers were—is the greatest happiness."

Mr. and Mrs. Stanton were cordially received by Mr. Wu. They went to China after a tour of Japan. Mr. Stanton won the John Stewardson Memorial Scholarship in Architecture at the University of Pennsylvania in 1914, but was unable to go to Europe for a year, under the provision of the award because of the war. He went to the Orient instead, with the approval of the scholarship committee.

* * *

FULLER details of building for September, 145 cities reporting to *Bradstreet's*, show a slight gain in value of building as compared with September a year ago, but a considerable decrease from the preceding month, and, indeed, from every month since February.

A feature of the current year's showing is that the gain for the half year, for the third quarter and for the entire nine months is in the neighborhood of 23 per cent. In other words, building expenditures so far this year are nearly one-fourth larger than a year ago, about equal to those of the entire year 1914 and larger than any preceding nine months in the country's history. The approximate nine months aggregates for a period of years as follows:

1916	\$761,611,297
1915	515,798,256
1914	644,687,371
1913	693,124,841
1912	714,476,512
1911	665,016,310
1910	654,069,417
1909	671,646,946

* * *

WE have heard much in the course of the past two years of European dissatisfaction with the "rush" workmanship of American goods shipped abroad under contract. It is refreshing to find the foreigner forced to concede, now and then,

the superiority of American methods.

In a remarkable article which appeared in a recent number of *The Ironmonger*, of London, on "The Manufacture of Water Pipes," the author, Percy G. Donald, makes some frank admissions regarding the superiority of American pipe over British, Canadian and German makes, the points including better packing methods, better threading, better manufacturing methods and greater economy in use.

The author refers especially to a project which he had in charge of laying pipe lines in Egypt. In unloading the pipe it was quickly seen that there was going to be a lot of trouble with damaged threads. The ends of the British pipes were protected only by a wrapping of canvas, while the strips of hoop iron screwed onto the ends of the Canadian pipe often left the thread ends exposed. The result was that a large percentage of the threads had to be run over. All of the American pipe was protected by a plate-iron stamping which absolutely protected the ends of the threads. The American pipe ends were also filled with a heavy fat mixed with black lead which prevented rusting, while the British pipes arrived dry and soon began to rust.

The author also calls attention to the greater length of American pipes and the fewer threads to the inch on the larger sizes, both points being commended as being more effective.

Praise is also given to the American practice of having one pipe for gas,

water and steam, while the British have three, all of different weights. The American manufacturer, also, has nothing to do with fittings, and this is presented as an advantage.

Finally, in the matter of costs it is shown that the American figures are lower, although the labor costs in America are nearly double those in England, while the distance from the American works to the shipping port is from three to five times that of the British works.

In concluding, the author asks:

"What better time than the present to create a proper standard, to scrap our absurd differentiations between gas, water and steam pipes, to scrap such unnecessary sizes as $\frac{7}{8}$ in., $1\frac{1}{4}$ in., $1\frac{3}{4}$ in., $2\frac{1}{4}$ in., to adjust our threads for the larger sizes, to leave to the fittings manufacturer the job of turning out fittings at comprehensive prices, and to make our profits on low costs?"

IN the haste of getting to press last week THE GUIDE failed to make mention of the fact that it was indebted to the courtesy of *The Evening Bulletin* for the very good portrait cut of the late William L. Price used in connection with a notice of the death of that gentleman in the issue in question. THE GUIDE begs to express its appreciation and sense of obligation to its much esteemed evening contemporary, by long odds the most readable and ably conducted of local evening newspapers.

EDITORIAL NOTES

It was an operative dwelling and the doors had shrunk painfully as is apt to happen with doors made of unseasoned wood. The builder would not send the joiner to repair them, so the householder tried the ironical method and wrote:

"Dear Sir—The mice can run under most of our doors, but our cat cannot follow them. Will you please send a man at once to make room under the doors for the cat, and much oblige?"

* * *

New York City's building zone plan is attracting the attention of cities all over the United States. Robert H. Whitten, secretary of the city plan committee, is receiving requests from citizens and officials from all over the country seeking information regarding the recently adopted zone plan. Philadelphia has just appointed a zoning commission. Chicago is considering a similar step. Many other cities are plan-

ning to follow New York's lead. The New York plan is considered one of the greatest advancements in scientific city building ever achieved by any American city.

* * *

Deposits in the four principal savings funds of Philadelphia have increased \$14,625,667 over a year ago and the number of depositors jumped 13,432, thus establishing high records in both cases. Aggregate deposits October 1 were \$196,894,643. The abnormal prosperity and widespread employment of labor in factories, mills and stores, due directly and indirectly to orders for war munitions and the widening circle of domestic demand it has created, accounts for the big expansion.

* * *

The annual convention of the Maintenance of Way Master Painters' Association of the United States and Canada, opened Tuesday morning in the

Hotel Walton with an address by Fred C. Rieboldt, of Milwaukee, president of the association, and closed with a banquet Thursday evening. Professor Henry A. Gardiner, chairman of the National Research Bureau, Washington, read a paper on paints, illustrated by stereopticon views. The fourteenth annual convention, next year, will be held in Cleveland. F. C. Rieboldt, of Milwaukee, was re-elected president.

* * *

"How's farming?"

"Fine. You know that abandoned farm I picked up?"

"That prompted my question."

"I sold quarry rights to one crowd and rented the surface as golf links. Now if I can lease the air to some wireless company I'll have about everything under cultivation. Who says intensive farming doesn't pay?"

* * *

In connection with the filing of plans in New York recently for new buildings of the skyscraper type, many of which were rushed through for filing before the new zoning and building heights act went into effect, the superintendent of the local building bureau has announced that while all such plans (covering a cost of \$40,000,000) were properly filed prior to the expiration date, July 25, it is necessary that such plans, to be effective, be approved with-

in three months. This is in accordance with a special resolution in the zoning act. Unless these plans are approved, therefore, and conform in all requirements to the former code, by October 25, they will virtually be outlawed.

* * *

Toledo, Ohio, reports an unusual business growth during the past year, no less than \$1,346,197 of building permits having been issued in August alone. Permits for the entire eight months of 1916 represents a total valuation of \$7,254,428, an increase of about 50% over the same period last year.

* * *

According to an opinion of the Corporation Counsel, roof signs are subject to the height and set-back restrictions of the building zone resolution in New York City. The provisions of Article XVI, of Chapter 23, of the Code or Ordinances, which relate to the height of roof signs, have been superseded by the provisions of the building zone resolution.

* * *

Following are some easily grasped fire figures:

Per Capita Fire Loss (1914).

United States	\$2.10
Austria	.42
England	.67
France	.63
Germany	.17

Italy	.37
Netherlands	.07

In forty-seven American cities, according to the American Year Book, the per capita loss during 1914 was over \$4, in thirty-four cities over \$5, in nineteen over \$7, in fifteen over \$10, and in ten between \$12 and \$33.

* * *

The Grand Central Station, in the opinion of the Tax Department, is the most valuable building in New York City. For taxation purposes building and site are estimated to be worth \$21,500,000. Next is the Equitable office building, assessed at \$20,500,000, and then the Pennsylvania Railroad Station, which is considered to be worth \$15,980,000. The most valuable dry goods store is Altman's, assessed at \$14,100,000; the second most valuable office building, the Metropolitan, \$12,500,000; the most valuable hotel building, the Waldorf-Astoria, \$11,650,000.

* * *

Walter F. Wyman, a foreign export manager, in an address before the Foreign Trade School of the Chamber of Commerce, said that if the war should end to-morrow, European manufacturing would be at least two decades behind that of the United States. American competition with Europe after the war, he said, must be based upon intense accuracy and honesty.

Do you get "The Guide" regularly? You should. Better subscribe now, while you think of it, and keep in touch. The man who fails to get and to read carefully the trade paper of his chosen line, is missing a while lot of valuable data that should be at his command.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, "The Builders' Guide" is the right medium for your advertising and cannot fail to bring you profitable returns.

Read "The Guide." Read it all through. Don't let a single item escape your notice. You'll be surprised what a lot of valuable information is crowded into its pages in the course of a year.

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers "stick" year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

The man who does not advertise is like the man who stops his watch to save time.—Exchange.

Advertise and the world buys of you;
Renig, and you need a loan.
If you never tell what you have to sell,
You'll have troubles all your own.
— 'Los Angeles Evening Herald.'

A DROP OF INK.

A drop of printer's ink
May make a thousand think.

A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.

It helps your biz',
And therefore is
A goodly thing to try.

Linoleum in Use 9 Years Without Wear

BECAUSE TREATED WITH

SAUMS PRESERVATIVE

PROCTORS THEATRE
Plainfield, N. J.

1907—The linoleum in the entrance of Proctor's Theatre, Plainfield, N. J., was treated with SAUMS PRESERVATIVE. Fully 1,000,000 people pass over this each year. Today after 9 years use there is no sign of wear. The color is bright and the linoleum soft and pliable.—Another proof of the lasting quality of SAUMS PRESERVATIVE.

SAUMS PRESERVATIVE is the "Best by Test of Time" treatment for Floors, Wood, Concrete, Composition and Linoleum.

Edison Says

"Electricity will sweep and dust, wash and dry dishes, wash and iron, cook and sew." With the present low rates for Electricity, it is truly economical to let Electric appliances take care of the routine household drudgery. Their use has solved many a servant problem, and made life easier and more pleasant for many a housewife.

Church, Woodland avenue and Marks streets, \$5,000. P. E. Church (O). George Dobbins (C), Chestnut Hill. Second story addition, 4x58 feet.

Store, 522 Arch street, \$700. Philadelphia Drug Co. (O), 522 Arch street. B. E. Ostrander (C), 954 Sartain street. Alterations and repairs.

Dwelling, 2056 St. Albans Place, \$550. Anna Stanton (O), on premises. Daniel Carlin (C), 1721 Bainbridge street. Second story addition, brick, 11x10 feet, slag roof.

Dwelling, 146 Pelham street, \$500. Wm. S. Turner (O), on premises. Samuel Harting (C), 20 East Johnson street. Repairs, shingle roof.

Storage, 123 South Forty-first street, \$700. M. W. Harris (O), Narberth, Pa. Ernest Purrin (C), Narberth, Pa. Brick addition, 1 story, 11x10 feet, tin roof.

Dwelling, 2931 North Seventh street, \$600. Arthur Scott (O), 2952 North Franklin street. Wm. L. Scott (C), 3225 Randolph street. Brick addition, 1 story, 10x8 feet.

Store, 3016 Kensington avenue, \$500. John E. Strecker (O), 3369 Frankford avenue. Edw. Klos (C), 3434 Frankford avenue. Rear addition, brick, 1 story, 15x25 feet, slag roof.

If you can persuade people to buy your goods you make money. "The Guide rounds up in its clientele the people you want to persuade. A certain amount of space and the right kind of selling argument does the rest.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

Lots of men don't advertise because they cherish an idea it's too expensive. As a matter of fact, it's the cheapest good investment a man can put his money in, as hundreds of successful men have learned.

The darkest hour in any man's life is when he sits down to plan how to get money without earning it.—Horace Greely.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 14, 1916.—Sealed proposals will be opened in this office at 3 P. M. November 27, 1916, for the construction of the United States post office at East Orange, N. J. Drawings and specifications may be obtained from the custodian of the site at East Orange, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

The Standard Documents of the American Institute of Architects

The New Contract Documents of the American Institute of Architects are now on sale and replace the old Uniform Contract, which is to be discontinued

PRICES FOR SINGLE COPIES

Agreement and General Conditions in cover	\$.10
Bond of Suretyship	.02
Form of Subcontract	.02
Letter of Acceptance of Subcontractor's Proposal	.01
Complete set in cover	.15

Trial set delivered upon receipt of nine 2-cent stamps.

These Documents have received the full approval of the Institute, through its Convention, Board of Directors and Officers. They are the outcome of nine years of continuous work by a Standing Committee on Contracts and Specifications. This Committee, comprising some of the ablest American architects, was assisted by the Institute's forty Chapters; advised by eminent legal specialists in contract law and aided by representatives of the Building Trade Associations of the United States. The forms have been officially approved by the National Association of Builders' Exchanges, the National Association of Master Plumbers, and the National Association of Steam and Hot Water Fitters.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 44

PHILADELPHIA
November 1, 1916

As The Editor Sees It

THE *Bulletin of the Master Builders' Exchange of Philadelphia* contains an interesting communication from Mr. William Stanley Parker, vice-chairman of the Standing Committee on Contracts and Specifications of the A. I. of A., answering certain criticisms of the new standard documents of the architects. Writes Mr. Parker:

"There are only two objections made, which I will state and answer in order.

"First. The document is too voluminous. It is stated at the top of the second column that there are 'twenty-one pages of matter to be read and digested carefully before it is signed by the Contractor.' In making up this total there has been included the standard form of sub-contract, four pages, and the standard form of acceptance of sub-contractor's proposal, two pages. These are documents that are not included in the general contract forms as issued by an Architect. They have been prepared and issued merely for the benefit of the Contractor, giving him two standard forms for use in his business; one to be used in important sub-contracts where it is desirable to have on a single document the signatures of both parties, and the other a simpler but equally binding form of acceptance of a bid for less important work. These he can buy at low cost and keep on file or use from day to day, as is now being done by one of the largest general contractors in New England, who has adopted these documents as his regular office forms.

"The Standard form of Bond, two pages (really four pages), is also added in the total. I have never known a Contractor to worry about the form of Bond. He has generally taken any form the Bonding Company has presented when getting bonds from sub-contractors when his interest is far greater, and when he frequently suffers by a form

of bond it is difficult to enforce. He may well study the Standard form, and adopt it when getting bonds from his sub-contractors. If he intends to fulfill his contract he need not worry about the form of bond he gives to the owner."

* * *

THERE remains then only the 'Agreement' form and the 'General Conditions.' No objection is raised to the first, which is arranged to include only those conditions which are special in each case, that is, the names of the parties, the amount to be paid, the method of payment, and the time of completion of the work, with any additional special conditions peculiar to the job in hand.

"We come down, therefore, to the General Conditions against which the indictment of great length, and also confusion of statement, is raised.

It is stated that with the former "Uniform Contract" only a hasty perusal was usual. Why? Simply because contractors did not read the printed matter, but only the blanks filled in, since *they knew what the printed matter contained!* But did they know what was contained in the added general conditions that formed part of each Architect's specifications which he had to write because the matters were not covered by the Uniform Contract? These were, of course, different with each Architect and often with different jobs in the same office. Would a contractor rather read these varying and unknown general conditions in each case while making up his bid than have a somewhat longer printed form which he can study at his leisure and recognize at a glance when it comes to him with a new set of specifications?

"Contractors ought to welcome a long standard set of General Conditions. From their point of view, the longer the better, for it means more of the situa-

tions that are met in building operations put in standard form so as to be quickly understood, and a consequent lessening of the new clauses that will have to be studied in each set of specifications."

* * *

THE Documents are in many ways far more advantageous to contractors than the Uniform Contract, and those who are advising associations for contractors should be quick to see this and make clear to their members the value of the new forms. They are not confusing, granted a reasonable ability to comprehend.

"The other point objected to is that the documents say that the Architect is not the agent of the Owner. Contractors in this case must accept the inevitable right of the Owner to dictate on this matter. No Owner can be, with reason, expected to put his purse and his personal judgment in his Architect's hands and tell him to do as he sees fit. He does, however, agree, by the terms of the General Conditions, that for the purpose of carrying on the work according to plans and specifications the Architect is empowered in many ways to act as his agent. He has no power, however, to change work or add work for which the Owner will have to pay without the Owner's consent. This is ordinary business common sense, and contractors must maintain some of this business commodity and get proper acknowledgment from the Owner for orders involving changes in the work.

"The caption of your article should in my opinion have read as follows—

"*New Standard Document of Architects Not in Favor Among Those Who Do Not Thoroughly Understand It.*"

* * *

AND, as my old friend Johnny Patterson would say: "There you are again!" A contract form that will please everybody is not humanly

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

possible. The question that determines the reasonableness or unreasonableness of a document of the kind is to what extent it approximates the spirit of fairness to all parties concerned. Most contractors, and all architects, regard the standard forms as the crystallization of an intelligent attempt to deal equitably with every phase of a more or less difficult situation. This is not, in any sense, a certificate of infallibility. They probably can be and doubtless will be improved in minor if not essential particulars. But this improvement will come as the result of definite and specific discussion and not from any disposition to find fault along general principles.

* * *

LITTLE Houses in Brick and Stucco" is the title of a paper in the October *Craftsman* that presents a number of shrewdly reasoned observations on the subject of what might be called the architectural verities. Not that there is anything strikingly new or daringly original in the ideas expressed by the writer. They are as old as Egypt, but they are as sound fundamentally to-day as they were in that cruder era in which the earlier craftsman inspired by a holy zeal, were laying the foundations for the arts as we know them to-day. It is healthy to have these old, basic, elementary principles recalled to us every little while. They sound, in the commercialism of an age unduly given to money-grubbing pursuits, a note calculated to bring us back to higher and better ideals. "Reasonableness and imagination," says the writer, "recognized by the mediaeval builders as the underlying principles of all great architecture, should be as inseparably united in the small home of to-day as they were in the great cathedralsof old. For the little house is an expression of thought, though a very different kind of one, as well as a cathedral. It is also an expression of art—if beauty be combined with usefulness. Art was born, as has often been pointed out, when useful things were accurately and beautifully made, were formed with vision. A square box strengthened with iron bands was a useful thing. When the bands were made in graceful forms and the box carved, then it became beautiful,—a work of art. A house staunchly made to defy enemies and shut out the rains was a satisfactory shelter, but it came not under the head of architecture until it was made shapely as well as stout, when doors and windows were set in symmetrical relation and the roof pitched to a pleasing angle. Common sense must go hand in hand with beauty, or as Michaelangelo says it: "Beauty must rest on necessities. The line of

beauty is the result of perfect economy." Beauty must be organic, said the old architects. Outside embellishment can easily become a deformity unless introduced in the most sympathetic of ways. This truth seems especially obvious in the small house. Large houses carry adornment better than the small ones, but even they reach to highest dignity when left free from what is generally termed ornament. The very word ornament, Pater points out, indicates that it is non-essential. The small house depends almost entirely upon structural symmetry for its beauty. A little home built upon a common sense floor plan with a simple exterior in which a delicate imagination and sense of proportion is expressed is one of the pleasantest objects to be seen in the whole world."

* * *

WORTH quoting, that. And for the young man in architecture, worth memorizing. The philosophy of it is not only sound. It is stimulating. It is tonic. It states, in little space, so much that ought to enable the young designer to avoid what is fundamentally bad in his art.

* * *

IN a discussion of materials for the *Little House* the writer has a chapter, worth reproducing, on brick:

"Brick has been in favor with builders," he writes, "from time immemorial. The Romans as far back as the sixth century used brick resembling a tile somewhat as far as its thinness was concerned. English houses of brick built in twelve hundred and sixty are still standing, testifying to the Roman influence. But they were used even before that date, for in the first part of Stephen's reign, eleven hundred and thirty-five, the leading citizens of London advocated the covering of houses by brick to lessen the risk of loss by fire, to prevent any more of the disastrous conflagrations that periodically swept London, fed by wooden houses thatched with straw.

"Brick in addition to its fire-resisting character has the quality of pleasing color. This twofold advantage puts it high in favor with home-builders. Besides its good color it has interesting texture and can be laid in many decorative ways. The crudity of the early hand-made unpainted brick gave to them a varied richness of color modulation and surface texture that was so much more pleasing than those one-toned ones smoothly painted in bright red, neatly striped with white, that modern makers have happily taken to imitating those varying tones of color that time and weather give. These modern brick are

made in every possible modulation of reds, browns, tans, terra cottas and grays, and in varying degrees of rough and smooth texture so that the builder of the tiniest of little homes or the tallest of skyscrapers can select a tone and a quality embodying his ideal. These modern quality-brick are especially charming for the small house, for they save it from the raw newness that offends the eye, giving it instead the time mellowed air that puts it in sympathy with Nature."

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

Labor means morality. The man who must work hard for a living has no time to run after other men's wives nor to constitute himself a receptacle for highballs. Only the laborers are religious. Leisure has ever been fatal to worship. It is useless to preach salvation to idle people. Remember the camel and the needle's eye.—"Onlooker."

SOME MORE ADVERTISING "DONT'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

BE PROGRESSIVE.

The best is the cheapest on both ends and in the center. Improvement does not impose a tax, as efficiency pays for itself. The penny scimpner cannot possibly hold out against as much as the gloomy, ugly, and unobliging progress. The best equipped shop never asks establishment. Be progressive.

The trouble with some advertising is that it is like the conversation of certain people—it never says anything.—"Novelty News."

EDITORIAL NOTES

Eighteen thousand tons of structural steel will go into the new Pennsylvania Hotel, in New York City, and 15,000 into the New York Central Hotel. At the current market price for plain material, which is 3 cents a pound or more at tidewater, as the minimum for ordinary delivery, the cost of the steel in either case runs into huge figures, without counting the charge for fabricating and erecting.

* * *

Michael Francis Doyle was the speaker at the weekly luncheon of the Master Builders' Exchange. Describing conditions as he saw them in war-torn Europe, he said that women are taking the place of men in every branch of industry and business, and wherever possible they are employed in the building trades.

* * *

Henry Baechlin, of Newark, was elected president of the New Jersey Chapter of the American Institute of Architects, at the October meeting. Other officers elected were: Vice-president, Stockton B. Colt, Elizabeth; second vice-president, Gilbert C. Higby, Newark; treasurer, re-elected, John F. Capen, Newark; secretary, re-elected, Hugh Roberts, Jersey City.

* * *

At the annual convention of the Oil, Paint and Varnish trade of the country, held at the Hotel Traymore in Atlantic City, a report was adopted expressing the conviction that prosperity will continue in the United States after the war abroad ends: "While there probably will be some temporary reaction due to the new problems we will face after the war, there is little doubt that the industrial and financial resources of our great country will be utilized by the European countries as much, if not more, immediately after the war period ends as in the past two years. It takes more material and labor to build up than to tear down" the report declared.

* * *

The National Association of Paint Jobbers, at the same place, passed resolutions urging the manufacturers to cooperate in the correction of abuses in long-term credits and discounts.

* * *

The International Portland Cement Corporation has been organized at Boston, to develop and equip a property in the Argentine Republic, containing a large deposit of raw materials necessary

for the manufacture of a high grade Portland cement.

Engineers estimate that cement can be manufactured and delivered in Buenos Ayres for \$1.60 (gold) per barrel. Under present abnormal conditions, cost would probably be \$2.35 per barrel. Previous to 1913, the average importation of cement was \$2,000,000 barrels a year. In that year the quantity imported reached 4,000,000 barrels. The average price, delivered, Buenos Ayres, has been \$2.92 (gold) from 1906 to 1911, and \$3.29 from 1912 to 1914. In the early part of this year the price reached \$5.40. No Portland cement has ever been manufactured in Argentina. Galen L. Stone will be chairman of the Board of Directors. Sheldon Bassett, now president of the Knickerbocker Portland cement Co., 30 East 42d street, New York, will be president and general manager.

* * *

Noble Foster Hoggson, president of Hoggson Brothers, who is now in Europe, is a member of the American Industrial Commission to France. The Commission is engaged in making a survey of the devastated section of France to determine what America can do towards rehabilitation. Mr. Hoggson is making a particular study of the question of industrial housing, town planning, the need for factories and other commercial structures, not only as to their planning and construction, but also as to their equipment.

SIMPLE TEST FOR BRICK POROSITY.

A simple test for brick porosity consists of holding the tongue lightly in contact with the brick, says a writer in the "London Building World." If a distinct suction is felt the brick will be very porous. If no appreciable suction is apparent, but the moisture rapidly dries from the surface of the brick, it is but slightly porous.

Bricks made by the semi-dry process—that is, by compressing the clay in the form of a damp dust—absorb only about 5 per cent. of water, though they vary greatly in this respect. Engineering brick absorb less than 1 per cent. of their weight of water. For all ordinary purposes, therefore, it is not desirable to designate bricks which absorb less than 15 per cent. of their weight of water, on immersion, as particularly porous.

We know lots of men who have made money without the aid of advertising, but—they haven't made it since 1876.

NEW POINT IN LIABILITY LAW.

Agreement Between Contractor and Sub-Contractor Does Not Permit Former to Shift Responsibility.

A contract or agreement between a contractor and sub-contractor is not good cause for the contractor to shift liability in the case of injury to or death of an employee of the sub-contractor, according to a decision recently reached by Referee William B. Scott, local representative of the State Workmen's Compensation Bureau. The workman must be a party to the agreement, declared the referee, otherwise it does not affect his rights.

The case involved the claim of Rosa d'Amico, widow of Guiseppe d'Amico, employed by James Porter, a sub-contractor under Irwin & Leighton, of this city. D'Amico was killed in an accident during the erection of a building for the Baldwin locomotive Works, Eighteenth and Buttonwood streets, March 1 last. An award of \$1,899.15 was made for the benefit of the widow and d'Amico's children, non-resident aliens.

In the case of non-resident aliens, the referee decided the award should be two-thirds the amount provided for residents.

COMING TRADE CONVENTIONS.

The National Builders' Supply Association will hold its annual convention at the Hotel Sherman, Chicago, February 11-12, 1917.

The Chicago Cement Show will be held in the Coliseum, Chicago, from Wednesday, February 7, to Thursday, February 15, 1917, inclusive.

The American Society of Mechanical Engineers will hold its annual meeting in New York December 5-8. Headquarters at the Engineering Societies Building, 29 West Thirty-ninth street.

Co., Twenty-sixth and Thompson street; Ketcham & McQuade, 1029 Brown street, and Bailey Lush Co., 201 North Broad street, Philadelphia.

Store (alt.), 7 and 9 North Second street, Philadelphia. Architect, Louis Levi, Real Estate Trust Building, Philadelphia. Owner, Max Sheetz, on premises. Brick, consists of new front, mill work, plumbing and general repairs, pine floors (heating, painting and electric work reserved). Architect has received bids.

Seal Deck Piers and Offices, Cherry street and Delaware river, \$500,000. Architect, private plans. Owners, Department of Wharves, Docks and Ferries, care Geo. S. Webster, Director, Bourse Building, Philadelphia. Pile foundation, reinforced concrete and steel; pier, 100x50 feet; office, 2 stories, 100x20 feet, slag roof, reinforced concrete and slate roof, electric lighting, metal lath, fire doors, rolling steel doors. Owners will advertise for bids in about two weeks.

Seal Deck Pier and Office, Kennilworth st. and Delaware river, \$700,000. Architect, Geo. S. Webster, City Hall, Philadelphia. Owners, City of Philadelphia, Department of Wharves, Docks and Ferries, Bourse Building. Pile foundations, reinforced concrete and steel, pier, 180x550 feet, and office, 2 stories, 180x30 feet, slag roof, reinforced concrete and slate roofs, electric lighting, metal lath, fire doors, rolling steel doors. Plans in progress. Owners will take bids about January 1, 1917.

Barrett Specification Roofs

Guaranteed
for
20
Years

OUR new plan to guarantee Barrett Specification Roofs for 20 years seems to have met with instant welcome from architects, owners and roofing contractors.

During the first few weeks the plan was in operation *several million feet* of Barrett Specification Guaranteed Roofs were specified.

This means that the owners of these roofs are guaranteed against all roof repair and upkeep expense until 1936.

This new Guaranty Bond is issued on all Barrett Specification Roofs of 50 squares or more in all towns in the United States and Canada of 25,000 population and over—and in smaller centers where our Inspection Service is available.

Our only requirements are that the roofing contractors be approved by us and that The Barrett Specification dated May 1, 1916, shall be strictly followed.

The Guaranty is arranged for as follows:

The owner or his architect orders the roofing

contractor to "construct a Barrett Specification Roof and get from him a Barrett 20 Year Guaranty Bond on the work."

The contractor notifies us that he wishes the 20 Year Bond and will construct the roof under the supervision of a Barrett Inspector.

The Barrett Inspector on completion of the job certifies that the proper quantity of Specification Pitch and Felt has been used and that The Barrett Specification of May 1, 1916, has been strictly followed.

On our O. K. of the job, the U. S. Fidelity & Guaranty Company issues a regular 20 Year Guaranty Bond, by which the owner is relieved of all costs for repairs or maintenance to the roof during the next 20 years.

The Guaranty Bond costs the owner and roofing contractor nothing. The service is free in the interest of good workmanship and the good repute of our materials.

If you are interested in the proposition we shall be glad to send you further details.

Electric Convenience

Very often you want a little something to eat or drink in a hurry, or maybe one of the family is taken sick during the night and something is needed quickly. An Electric Chafing Dish, Stove or Water Heater would supply you with whatever you wanted in a few moments, economically and satisfactorily. This is just one of the many electrical conveniences.

Manufacturing Building, Seventeenth and Lehigh avenue, \$665. Keystone Screw Co. (O), on premises. Thos. McKreeceley, 4411 North Ninth street. Brick, 1 story addition, 16x24 feet, slag roof.

DO IT NOW.

All we have is just this minute

Do It Now.

Find your duty and begin it

Do It Now.

Surely you're not always going

To be "a going to be," and knowing

You must sometime make a showing.

Do It Now.

SURE.

Stick to your work, forget the mob.

Avoid the discontented throng;

For, if you're always on the job

Success is sure to come along.

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: "Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him."

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., October 24, 1916.—Sealed proposals will be received at this office until 3 P. M. November 28, 1916, and then opened for remodeling the U. S. Post Office, Beaver Falls, Pa., in accordance with drawings Nos. 1-A and 2-A and specification, copies of which may be had at this office or at the office of the Custodian, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 45

PHILADELPHIA
November 8, 1916

As The Editor Sees It

PLANS for doing away with the present ruinous system of open competitive bidding on building contracts, continue to be discussed by the trade. The latest suggestion in this line proceeds from William H. Sayward, secretary of the Master Builders' Association of Boston:

"The secretary's office has frequently been approached by public officials, who have been authorized to secure estimates for construction of public buildings, for advice in regard to the best method of securing estimates and award of contracts," says Mr. Sayward.

"The ground for this inquiry has been the natural desire of such authorities to secure bids from contractors qualified to perform the work in question. They have been impressed with the difficulties surrounding their duty in the premises by the fact that custom, and the law in most cases, requires the throwing open of opportunity to bid for such work to any one who wishes to submit a proposal, the consequent result being that after the bids are in the authorities are perplexed not only by the variation in the bidding, but by variation in the character and responsibility of the contractors submitted proposals."

* * *

IN response to a recent appeal of the character above referred to, the secretary has given an opinion in a letter, which is substantially as follows:

Referring to the matter in regard to which you have asked my opinion, viz., the securing of estimates for a school building for your city, I beg to offer the following suggestions:

The usual procedure of wide-open advertising for bids to the whole world of bidders, good, bad and indifferent, seems to me to invite difficulties that can be avoided.

When this procedure is followed, the persons in authority are invariably con-

fronted with a perplexing condition. Bids varying in amount are offered by concerns widely varying in responsibility, ability, character and experience, and determination as to award of a contract with these conflicting factors present, and which must be weighed, is unavoidably perplexing and subjects those who have to arrive at a decision to many doubts as to the wise and just course to pursue.

If they use their best judgment as they would if the work were their own, and award to a concern which is not the low bidder, they may be sure that severe criticism will be made of them because they are "spending the public money improperly."

On the other hand, if they award to the low bidder simply because his bid be low, and the work in execution is faulty in any respect, then they again receive condemnation for their lack of judgment."

* * *

TO my mind, the procedure should be different from this usual course, determining as the first issue the character, experience, reputation and responsibility of those who desire to bid as the basis upon which bids will be enteratined.

I advise, therefore, in all such cases, that the persons in authority issue a preliminary notice (public advertisement would probably be necessary) to the effect that estimates were about to be invited for the proposed building, and that those who wished to submit estimates (bids) must first file their names, together with statement of principal works of significance they had performed—name of those to whom they could refer as to their reputation for satisfactory execution of work, honesty and general ability, and a sworn statement of their financial standing.

From this list the authorities should

then select those from whom they would entertain bids, and in issuing invitations to these parties should state that to the lowest bidder of those thus invited he contract would be awarded if the appropriation available would permit.

It seems to me that this procedure is the only fair way to deal with public work, and, as far as is humanly possible, provides reasonable and proper defense against unfortunate results, so constantly presented under the commonly accepted methods adopted in inviting bids and awarding contracts."

* * *

THERE was a marked increase in building operations in this city according to the October report given out by William W. Gamble, statistician in the Bureau of Building Inspection. This shows that 85- permits were granted in the month drawing to a close for 1,307 operations, at a cost of \$4,040,515, as compared with 846 permits in the corresponding month of last year. The figures for September, 1916, were 745 permits for 1,153 operations, costing \$3,301,310.

The report for the first ten months of the present year as compared with that of the corresponding period of last year shows a decrease in operations of 3,933, but an increase in cost of \$2,557,092. The figures follow: First ten months, 1916, 13,322 operations, costing \$39,969,050; first ten months, 1915, 17,255 operations, cost, \$37,412,958.

Following is the official summary of the building work undertaken in October, 1916:

Character	Oper's.	Estimated Cost
Dwellings, 2 story.....	481	\$1,346,600
Dwellings, 3 story.....	60	331,050
Dwellings, frame	1	4,500
Stables	5	25,760

MR. CURTIS' *Public Ledger* is inclined to lay a great deal of the blame for confusion in bidding among contractors to the carelessness with which architects draw up the specifications governing important work.

"In these days of high prices of building materials every effort should be extended by the architects to assist the contractors," says the *Ledger*, "in getting down to rock-bottom prices. One way to accomplish this end is to eliminate the element of guesswork in making up estimates, and the best place to begin is the specifications. It is true that quite a few architects—and good ones, at that—are careless in the writing of their specifications, not so much due to lack of time spent on them or number of pages written as ignorance in the use of trade terms. This lack of knowledge usually results in the contractor taking a big chance, guided by the little knowledge he is able to glean from the verbose description of the article in question.

"It should be remembered that the specifications are for the contractors, and should be written in terms which he understands, and should not be a voluminous treatise which can only be interpreted by the writer. Every effort is put forth by the manufacturers of building materials to standardize their goods in such a way as to make specification writing easy for the architects. If the architect would only stop, look and listen for a minute, he would easily get acquainted with these trade terms, and, in addition to getting better bids, he would materially cut the size of his specifications by the elimination of unnecessary descriptions."

* * *

EFFORTS to limit, within niggardly proportions, the outlay of expenditure to be made upon the new Convention Hall will find little sympathy among Philadelphians who

want to see their native city take its place among the great metropolitan centers of the country. Apropos of the taxpayers' suit instituted *The Bulletin* remarks:

"There is no desire on the part of general public opinions for a niggardly policy in this matter. An adequate auditorium for public use is needed, and it goes without saying that such a building should be, not merely in size, but in architectural design and finish, a credit to the city—in its ornate as well as its utilitarian features commensurate with, and typical of, the city's ideals. Moreover it is to be borne in mind, in fair consideration of the proposition, that there has been a decided increase in the cost of building construction since the first action was taken in financing the enterprise.

The point of concern directly involved in this case, however, is in the legality of the action taken. The decision of the court is necessary that the way may be cleared of any possibility of future interruption. The money market has been tried and found favorable to the city's loan, and there need be no further hesitation because of lack of available funds. Provision is now fully made for the clearing of the Parkway, and it is time that the work on the Auditorium and on other municipal enterprises which are to adorn this avenue should be put under way."

* * *

THAT Philadelphia is ready to welcome a zoning system, fashioned, in some sense, after that recently put into effect in New York City, is demonstrated by the general approval with which the address of Lawson Purdy, vice-chairman of the Commission on Building District and Restriction of New York City, was greeted last week at the zoning conference called at the Hotel Adelphia.

Mr. Purdy told first of the municipal ordinance—an enabling act, virtually—which was necessary in his city before the commission was able to begin its practical work. He described, too, the difficulties, physical and personal, which were brought to bear, mostly from financial reasons, to thwart the work of the city planners.

He was questioned in detail on many of the points he brought up, and the interrogations indicated the deep interest and the practical thought that is being put into the work here in Philadelphia.

Two cases seeking to restrain the building, here, in residential localities, of public garages are now pending before court. The ground upon which the objection in each instance rests is that the garages proposed constitute a "nuisance."

It is contemplated to build one of these garages on Chestnut street, west of

Forty-fifth street, on a lot running through to Sansom street. Owners of properties on Sansom street have filed a petition in court alleging that such a building will constitute a public nuisance on account of the noises made by cars coming and going at all hours of the night and day, and they further allege that their properties will be seriously depreciated as investments on account of the proximity of the building.

The second suit was brought by property owners in the vicinity of Thirty-eighth and Chestnut streets, of whom Archbishop Prendergast is one, to prevent John A. Colahan, Jr., from building a large public garage on the lot at the southwest corner of Thirty-eighth and Chestnut streets, directly opposite St. James' Catholic Church. In this case also it is alleged by the complainants that the garage contemplated will be a nuisance and in violation of a clause in the deed under which the lot and most other lots in the vicinity were sold. This is one of the oldest restrictions in any deed to Philadelphia property, and was in common use at a time when neither garages nor moving picture theatres were foreseen as a development of modern life. This clause bars the use of the lot sold for all time as a site for a "carpenter shop, stable, bone-boiling or a skin-dressing establishment, or for any other building of offensive occupation." It has been frequently upheld in a recent case when it was sought to invoke it against the erection of a moving picture theater on the ground that such a structure was a building "for offensive occupation," the court ruled that the term "offensive" was to be construed in a general, not in a particular sense—in other words, that the building must be of such a character as to be generally "offensive," not offensive to a few persons who might reside or own property in the vicinity. The injunction asked for was accordingly refused, the Court holding that a moving picture theater, while it might be offensive to a few persons, could not be considered as generally offensive.

* * *

WHETHER the courts will so construe the word "offensive" as applied to a garage remains to be seen. The complainants, however, do not base their case alone on an alleged attempt to violate the restriction in the deed, but assert that the garage will prove a nuisance and will depreciate the value of their properties. In this contention some lawyers believe they have taken stronger ground, for it is conceivable how a large garage improperly conducted might easily become a nuisance and detrimental to surrounding property used for residence purposes.

EDITORIAL NOTES

An increase of \$8,000,000 in revenues on ninety-six railroads for September is reported in returns made to the Interstate Commerce Commission, according to a statement issued recently. These revenues were \$66,039,262, as compared with \$58,815,487 for September, 1915. For the three months ended with September the net revenues of these carriers amounted to \$190,781,641, as compared to \$160,550,366 for the similar period of 1915.

* * *

Charles Custis Harrison, who has been president of the Philadelphia Art Jury since it was founded, has sent his resignation to Mayor Smith. He said the work required too much of his time. The Mayor accepted the resignation and appointed John Frederick Lewis, president of the Pennsylvania Academy of the Fine Arts, to membership on the jury to fill the vacancy. The jury will elect its president to succeed Doctor Harrison. Doctor Harrison was formerly provost of the University of Pennsylvania.

* * *

Percy H. Wilson, former secretary of the American Portland Cement Association, told the members that, through advertising, the production of Portland cement had increased from 300,000 barrels in 1900, to 90,000,000 barrels this year. The cost was reduced from \$2.10 to 90 cents a barrel.

* * *

The window glass industry has under consideration a contract form similar to that adopted earlier in the week by the National Association of Sheet and Tinplate Manufacturers; that is, the elimination of all conditions and provisions guaranteeing prices against market declines, according to an announcement made here. A committee of the National Glass Distributors' Association discussed the proposed contract with leading manufacturers here. No decision was reached, but the question was left open while committees of each side will make further investigation.

* * *

The Advance, issued by the Corn Exchange National Bank, states: "Philadelphia is either to grow rapidly and along broad lines and become one of the great commercial and manufacturing centres of the world, or she is to lose her great sources of wealth and drift back into a condition of decreasing values and declining commerce. Payment of taxes under present day conditions, when the city has adopted an ambitious plan of general development, bringing new bene-

fits to all divisions of the population, is certainly in the nature of an investment, and those who profit most through the growth of Philadelphia should be asked to bear the larger share of that burden, always bearing in mind the fact that equity in taxation must always be influenced by the ability of the government to collect a given tax without involving an expenditure in such collection greater than the promised return from the tax."

* * *

"The pig iron market of the last two weeks," says the *Iron Age*, "is virtually without a parallel in the experience of present-day producers. Following advances of \$1 to \$2 a ton recorded recently, prices in all northern selling centers have gone up \$2 to \$3 more, with every indication that higher levels will be reached. The advances are unprecedented in being due, not to a clamorous demand for iron for quick shipment, as in all previous excited markets, but to a simultaneous effort of buyers to cover far forward requirements—in many cases through the second half of 1917."

* * *

The hardware business is supposed to be a sober, staid, uneventful pursuit, done very much after the fashion of our grandfathers and with as little excitement. As a matter of fact, it is as changeable and full of surprises as a five-reel movie, and the dealer who fails to keep up with its mutations soon finds himself with a lot of unsalable, out-of-date stock on hand. This is particularly true of builders' hardware.

For some reason transoms do not seem to be used in new buildings to anything like the same extent as formerly; consequently, transom hinges and transom lifters are not selling so well as before. So, too, is the matter of sliding door locks. Very few sliding doors are used in modern construction, and such as are used are nearly all single doors with flat fronts. So double sliding door locks, with either flat or astragal fronts, are practically out of date.

So in the matter of finishes for builders' hardware, the old No. 3 finish, which meant a black background with a polished raised surface, once so popular, is now regarded as crude and tawdry, very much as the present generation regards chromos. Dull brass finish is much in favor, but the story of all finishes is as uncertain and fitful as the career of a politician.

* * *

A twelve-year first mortgage loan of \$4,000 has been made by the Thrift

Banking Institution, of Brooklyn, to William B. Sievers on his property at 2133 Sixty-seventh street, Brooklyn, a one-family dwelling on a plot 24 by 130 near the Twenty-second avenue station of the Sea Beach subway, in Mapleton Park.

Under the form of mortgage the purchaser, by paying \$39.76 a month for a \$4,000 mortgage, satisfies both principal and interest in twelve years, the 104th payment canceling the mortgage. In that time \$5,725.44 is paid, including principal and \$1,625.44 interest. The average annual cost for carrying the loan is \$143.79, and while the mortgage is written at six per cent., the actual cost for carrying it is only three and three-fifths per cent.

* * *

Those present at the recent zoning conference at the Adelphia, included Mayor Thomas B. Smith, Director of Public Safety William H. Wilson, Director of Health and Charities Wilmer Krusen, E. T. Stotesbury, Chester Albright, Joseph E. Widener, Director of Wharves, Docks and Ferries George S. Webster, LeRoy Worrell, John B. McClatchy, Edgar V. Sealer, Bernard J. Newman, Edgar S. McKaig, President of Select Council James E. Lennon, Dr. Edward B. Gleason, President of Common Council; Joseph P. Gafney, chairman Finance Committee of Councils; Joseph C. Smith, Benjamin A. Halde-man and William C. Stanton.

* * *

Razing of Convention Hall will start soon. Bids for its demolition will be opened November 10 by Chief Cumiskey, of the Bureau of City Property.

That taxation systems based solely on real estate have proved futile and that bad revenue systems are present in practically every American municipality because of it, were assertions made at a symposium on taxation conducted by the Walnut Street Business Men's Association at the Bellevue-Stratford Hotel. Allan C. Girtwood, secretary of the Maryland Tax Commission, and Laurence McGuire, president of the Real Estate Board of New York, were the speakers. E. J. Berlet presided.

* * *

"Philadelphia needs primarily a budget system," Mr. McGuire said, "to replace its present inverted scheme of fitting expenses to revenue. Local assessments on improvement to real estate ought largely to replace the practice of floating loans for current expenses, and the suburban tax rate ought to be equal-

ized." The city's financiers are at present working on a budget system.

Franchise charges and occupation taxes were criticised by Mr. Girtwood, who said that a fair basis for assessment lay in taxation of return on capital, especially for those who held little property and who now are almost untouched by taxation.

"Real estate men," continued Mr. Girtwood, "can obtain lasting relief only by a course at variance with that heretofore adopted by most of them, and that is by assisting public officials in curing defects in administration. Tax exemptions are too liberal, and residence districts contribute a larger percentage than do business properties, notwithstanding there is more increment to the latter. Unearned increment taxes, however, are flare-ups. The only sound tax is a frequent re-assessment as often as changes in value occur."

A PLEA FOR A BETTER SYSTEM OF ESTIMATING

By G. ALEXANDER WRIGHT*

COMPETITION, so called, among contractors is comparatively a modern innovation. The words "so called" are used intentionally, for under the prevailing conditions, competition intelligently and conservatively conducted is the exception, and not the rule. Our methods to-day are largely gambling methods when it comes to ascertaining the quantities of materials which go to make up a structure and which must, of course, be accurately ascertained before an intelligent, satisfactory bid can be made.

So true is this that it is a matter of common knowledge that fully fifty per cent of the contracts let are the result of error, and further, that the more capable and careful a bidder is, to get in all his items, the less chance he has of securing a contract, profitable or even otherwise. The lowest bid, the one generally accepted, is usually anything but the most accurate.

One of the greatest inconsistencies also, in competitive estimating, lies in the fact that no sooner are bidders invited to give a price on a job, than they seem to compete among themselves to see who can take off the least quantity of material, etc., and it is surprising how well some of them succeed.

What the Quantity System Means..

The quantity system is not, as some persons have supposed, merely the tak-

ing off of a list of items by one person, for one other person's use, nor does it consist solely of the listing of items by individual contractors with varying methods and uncertain accuracy, owing in part to the fact that contractors are seldom, if ever, allowed proper time in which to make up an accurate bid. It must not be overlooked that some "training" is also essential to the accurate preparation and classification of quantities.

What the quantity system does mean, however, is the careful measurement by an independent person specially trained in this special kind of work, and the present age is undoubtedly the age of the specialist. This specialist, or quantity surveyor, proceeds with his work somewhat differently to the average contractor, for he follows certain recognized rules in taking off, abstracting and billing, with a view to eliminating error.

He uses also certain uniform standards of measurement, and expression. Every written word or figure is preserved for future reference. His checking and rechecking methods to insure accuracy, must be studied, to be appreciated by those to whom the quantity system is unknown.

Records Made.

A record is made of every item, however small, having a money value. These items are then all classified and arranged,

each under its proper trade or department in methodical order. Guesswork methods are unknown to the quantity surveyor, whilst his accuracy and attention to details is well worthy of comment.

The surveyor who does this work is a professional man similar to the engineer and the architect. He should, in fact, have, and usually has had some experience at least in the work of these professions, and in addition, a practical experience acquired in the field, in actual superintendence of construction work.

Such a surveyor then upon commencing to take off quantity from an architect's or engineer's drawings, readily detects any ambiguities, or discrepancies which exist, through hasty preparation or otherwise. Attention of the architect or engineer is at once called to such matters by the quantity surveyor, as he goes along. Being so detected, such ambiguities and uncertainties can be, and are, corrected and adjusted, so that by the time the drawings and specifications reach the bidders for estimating purposes, all doubts have been cleared up, and everything has been made so plain and accurate, that the possibility of error in quantities can be practically disregarded.

This document, prepared exclusively in the surveyor's office, is then either printed or similarly reproduced, and a fac simile copy supplied free of cost to each bidder, who inserts his unit price opposite each item, and readily foots up the money cost in dollars and cents, and which really is all that he should be asked to do. The quantities of materials and labor then set forth in this document, or bill of quantities, represent the limit of what the contractor will be called upon to perform or furnish, in order to complete his contract.

Bid Becomes a Proposal.

In short, the bid becomes a proposal to do a certain "fixed quantity" of work, indicated in the quantities, no more and no less. The contract to be drawn accordingly. This then very briefly is the main underlying principle of the quantity system of estimating, a definite quantity of work for a definite price, and payment according to a well defined systematized method of measurement, and the entire elimination of those well-known conditions and elements, which now compel bidders to take chances, and for which all parties usually suffer in the end, the owner included.

Most of us are familiar with these wasteful, unsatisfactory methods, and sometimes, even pernicious practices, which are followed to-day in bidding upon and carrying out work. These injure both parties to a contract, and they

(Continued on page 742.)

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Residences (8), Wingohocking street, west of Eleventh street. Architect, private plans. Owner, Joshua M. Holmes, 4538 N. Twelfth street, Philadelphia. Brick, 2 stories, 17x56 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Owner taking sub-bids. Will start work at once.

Factory (add.), 839 North Third street, Philadelphia. Architect, private plans. Owners, Royal Pioneer Paper Box Co., 934 North Third street, Philadelphia. Brick and steel, 3 stories, 25x105 feet, slag roof, pine floors, metal sash, fire doors, tile work. Owners taking bids, due November 8th. Frank E. Wallace, 1220 Chancellor street, Graham-Campion Co., Heed Building, are figuring.

Group of Buildings, Front and Federal sts., Philadelphia. Architect, Wm. H. Cookman, Broad St. Station, Philadelphia. Owners, Penna. Railroad Co., Broad Street Station. Brick, steel, concrete and corrugated iron, 1 and 2 stories, various sizes, slag roof, cement, pine and maple floors, dampproofing, consists of office and tool house, wagon scale office, loading and island platforms, carpenter shop and scale office on loading platform, yard clerks' office, car inspector building No. 3 and garage. Plans completed. Owners will advertise for bids in one week.

Residence (alt. and add.), 1635 Spruce st., Philadelphia. Architects, Mills & Van Kirk, Harrison Building, Philadelphia. Owner, Jos. R. Wainwright, 505 Chestnut street, Philadelphia. Brick, 3 stories addition, 15x22 feet, slag roof, wire lath, dumbwaiter, dampproofing, electric lighting, tile work. Architects have received bids.

Store Building, 716 North Broad street, Philadelphia. Architect, Frank E. Hahn, 908 Chestnut street, Philadelphia. Owners, Metropolitan Auto Supply Co., 702 North Broad st. Consists of alterations to first floor, new hot water heating, electric lighting, new floors, new front, etc. Plans in progress.

Stores (alts.), 900 Chestnut street, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Lea Estate, 700 Sansom street, Philadelphia. Consists of general interior alterations, shoring, new fronts, new floors, partitions, etc. Revised plans in progress.

Lead Shop (add.), Frankford Arsenal, Philadelphia. Architect, private plans. Owners, U. S. Govt., Col. Geo. Montgomery, Frankford Arsenal. Brick, steel and concrete, 2 stories, 38x43 feet, slate roof, metal sash, waterproofing, cement floors, wire lath. Lowest bidders, Monaghan & Losse, 3016 Chestnut street.

Residences (22), South side of Christian street, between Sixty-second and Sixty-third streets. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owners, Schuykill Realty Co., 5642 Walnut street, Philadelphia. Brick, 2 stories, 16x54 feet, garage addition in rear, slate, slag, tile and tin roofs, hot water heating, electric lighting, hardwood floors, tile work. Plans completed. Owners will take sub-bids on all lines in a few days.

Residences (42), north side of Olney avenue, west of Broad street. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, name withheld. Brick, 16x56 feet. Plans in progress. Too early for details.

Residences (19), Tioga and Palethorp sts., Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, Wm.

A. Lechler, 3705 Germantown avenue. Brick, 2 stories, 14x35 feet and 15x46 feet, slag roofs, hot air heating, combination lighting. Owner will be ready for sub-bids in about one week.

Shop Building (alts.), 421 North Marshall street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, J. M. Kennedy, Jr., 1001 Chestnut st., Philadelphia. Brick, 3 stories, general interior alterations to shop, steam heating, electric lighting, yellow pine floors, slag roof, skylights. Plans about completed. Owner will take sub-bids in about one week.

Factory, 1719 North Tenth street, Philadelphia. Architect, private plans. Owners, Jno. E. Sjoström Co., Inc., on premises. Brick, 3 stories, 96x154 feet, slag roof (heating reserved), electric lighting, steel sash, fire doors, freight elevator, skylights. Owners have received bids.

Post Office (alt.), Ninth and Market sts., Philadelphia. Architect, Jas. A. Wetmore, Treasury Dept., Washington, D. C. Owners, U. S. Govt., Treasury Dept., Washington, D. C. Interior alterations, metal lath, tile work, dumb-waiter (plumbing and heating separate bids). Owners taking bids, due November 29th at 2 p. m. E. P. Fonder Co., Land Title Buildin, F. G. Stewart, 1619 Sansom street, and Jos. Price, 2048 Rittenhouse street, are figuring.

Packing Plant (alt. and add.), West Philadelphia Stock Yards, Thirtieth and Race sts., Philadelphia. Architect, C. B. Comstock, 110 West Fortieth street, New York City. Owners, Penna. RR. Co., Broad Street Station, Philadelphia. Brick, steel and reinforced concrete, 2 stories, 61x125 feet, asbestos, steel reinforced concrete and composition roof, metal sash, waterproofing, fire doors, ventilators, reinforced concrete and brick floors, hollow tile, elevators, roofing steel doors. Plans completed. Owners will take bids soon.

Poultry House, Van Pelt above Cambria street, Philadelphia. Architect, Robert Wilson Pollock, 1302 Chestnut street, Philadelphia. Owner, Jos. Manfredi, 2123 W. Spella street. Brick, 2 and 1 story, 14x63 feet, slag roof, pine floors. Owner has received bids.

Residences (4), 1213-19 Wakeling street, Philadelphia. Architect, Lachman & Murphy, Witherspoon Building, Philadelphia. Owners, C. West & Co., Oxford and Wakeling streets, Philadelphia. Brick, 2½ stories, 16x56 feet, slate and tin roofs, hot air heating, hardwood floors, electric lighting, tile work. Owners taking sub-bids on all lines.

School (alt.), Broad and Jackson streets, Philadelphia. Architect, J. Horace Cook, Nineteenth above Chestnut street. Owners, Board of Education, Nineteenth above Chestnut street. Consists of carpenter and mill work (plumbing, heating and electric work separate bids, due November 10th at noon). Mitchell Bros., 2125 Race street, Philadelphia, are figuring.

Playgrounds (2), Cedar and Cambria streets and Twenty-second and Sedgley avenue. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Board of Recreation, room 527. Consists of swimming pools, shelter buildings, slag roof, brick and reinforced concrete (plumbing and electric work separate bids). Owners taking bids, due November 9th. In addition to those previously reported, M. &

J. B. McHugh, 892 North Markoe street; Wm. Mundy, 228 South Alder street, and Francis S. Markland, 1500 Sansom street, are figuring.

Playgrounds (3), Shirley and Frances sts., C street and Indiana avenue, and Sixth and Christian streets, Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Board of Recreation, room 537, City Hall, Philadelphia. Consists of grading walks, etc. Owners taking bids, due November 9th at noon. In addition to those previously reported, M. & J. B. McHugh, 892 North Markoe street; Wm. Mundy, 228 South Alder street, and Francis S. Markland, 1500 Sansom street, Philadelphia, are figuring.

Reading Room and Executive Office, southwest corner Fortieth and Walnut streets. Owners, First Church of Christ Scientist, care John F. Braun, Real Estate Trust Building, Philadelphia. Too early for details.

Office Building, Mantua Yard, Thirty-eighth and Pennsgrove streets, Philadelphia. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Penna. Railroad Co., Broad Street Station, Philadelphia. Brick and concrete, 2 stories, 25x55 feet, slag roof, pine, concrete and composition floors, electric lighting, metal lath, ventilators, marble work (cement, paving and metal lockers reserved). Owners taking bids, due November 8th. Bailey-Lush Co., 201 North Broad street; Roydhouse-Arey Co., 112 North Broad street; John N. Gill & Co., Heed Building; Loos & Dothard, Commercial Trust Building; Armstrong & Latta, Land Title Building; Brann & Stuart, Commercial Trust Building; A. B. Cushing, Commercial Trust Building; Abel Bottoms & Sons Co., 3611 Walnut street; Chas. McCaul Co., 1713 Sansom street; A. L. Carhart, Hale Building; Edw. F. Fonder Co., Land Title Building; Monaghan & Losse, 3016 Chestnut street; Lincoln H. Smith, Hale Building; John Goll & Co., 1529 Filbert street; F. A. Havens & Co., 845 North Nineteenth street; Manwaring & Cummins, 5622 Germantown avenue; E. E. Hollenback, Fifteenth and Race streets; Chas. Gilpin, Harrison Building; and Mitchell Bros., 2125 Race street, Philadelphia, are figuring.

Geo. W. Smith & Co. deliver in New York with their Autocar

"There is no place within 100 miles of us that we cannot now reach quickly and economically with our Autocar," say George W. Smith & Co., of Philadelphia. "For prompt shipments to New York, for example, the car has proved of remarkable service. Runs over there and back the same day loaded to capacity with building material, and never fails to deliver on time. The low cost of operation has impressed us and also the staying qualities of the car."

Write for illustrated catalog and list of more than 4000 concerns using Autocars in every line of business.

Deal, 1516 North Register street, Baltimore. Concrete, steel, 3 stories, 17x90 feet. Contract awarded to Henry L. Maas, 1119 Ensor street, Baltimore, Md.

A PLEA FOR A BETTER SYSTEM OF ESTIMATING.

(Continued from page 734.)

arise largely from bidders' mistakes in figuring, because accuracy has to be so often sacrificed for an ill-advised speed. A large proportion of these mistakes occur in the hurried figuring of the "quantities" by bidders. Some of us, when we have the opportunity of looking behind the scenes, so to speak, become appalled at the resultant effects of existing practices, such as the enormous waste in time and money in useless figuring, disputes, harassing conditions, hard feeling, lack of confidence, delays, suits at law and so forth, nearly all of which may be avoided by adopting more conservative modern methods in our preparatory work, before contracts are let.

Contract Cost.

Further interpretation of plans and specifications should, in common fairness to both parties to the contract, be made wherever possible, before a contract is let, and not be left until afterwards, nor to be done "as directed." Notwithstanding the fact that over forty per cent of the entire population of our cities are dependent directly or indirectly upon the construction of buildings, yet the methods generally followed to determine the important question of contract cost, are those used generations ago; they come to us as a tradition from the period when

MARYLAND

Contracts Awarded

Factory, Highlandtown, Baltimore County, Md., \$285,000. Architect, Otto G. Simonson, Casualty Tower, Baltimore, Md. Owners, Crown Cork and Seal Co., Baltimore. Contract awarded to Longacre Const. Co., Widener Building, Philadelphia.

Factory Building (add.), Hamburg and Bayard streets, Baltimore. Architect, private plans. Owners, Baltimore Gas Appliance Co., on premises. Brick, 1 story, 70x80 feet, slag

roof, concrete floors. Contract awarded to B. F. Bennett Building Co., 123 South Howard street, Baltimore, Md.

Building, foot of Hanover street, Baltimore, Md. Engineer, Mr. Birmingham, care of H. Taylor, Munsey Building, Baltimore. Owners, Maryland Tube Co., on premises. Brick, steel and concrete, 1 story, 70x240 feet, slag roof, steel sash, cement work (heating and lighting reserved). Contract awarded to Price Concrete Construction Co., Maryland Trust Building, Baltimore, Md.

Residence, Ten Hills, Md., \$10,000. Architect, J. R. Gerwig, 1811 Ashburton street, Baltimore, Md. Owner, A. C. Wiley, Ten Hills, Md. Frame, 2½ stories, slate roof,

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

VARNISHES, FILLERS, PAINTS, STAINS, ENAMELS

There's beauty and durability and satisfaction for Contractor, Architect and Owner in every brush full. Prices, samples and literature on request.

EUGENE E. NICE, Manufacturer, PHILADELPHIA, PA. and CAMDEN, N. J.

tallow candles were used. Whilst we have made wonderful strides in constructive methods and materials, and, let us hope, in design, little or no attention has been given to standardizing estimating methods.

We seem to have been too busy "speeding up," to regard seriously the advantages of economy, when it comes to spending money on construction. In the end, of course, it is the owner, the financier, who suffers. There are, however, indications as the result of the movement initiated in San Francisco, that more conservatism and a closer adherence to business principles are going to be preferred by the moneyed interests in place of the guess work and gambling methods which they have overlooked in the past.

Advantages of Quantity System.

Among the advantages and improved methods of estimating afforded by the quantity system may be mentioned:

First, the enormous saving of time and money now wasted by numerous bidders all doing the same thing, going over the same ground.

Second, safer bids will be made, as the volume of work to be performed is clearly indicated by the bill of quantities, which is the essence of the contract.

Third, no expense to the bidder, the owner pays for his own quantities "knowingly," and they benefit him as well as the contractor. The owner pays now, but this fact is not emphasized or brought to his attention, and so he does not know it. The percentage added to a bidder's net cost is not all profit, a certain portion of such percentage is absorbed in costs of running his business and similar overhead charges, which ultimately are, of course, paid by the owner.

Fourth, saving of disputes arising from extra claims which often occur through vagueness of drawings, and omissions, or other error in specifications.

Fifth, better opportunities for the careful, competent bidder. With the quantity system the bidders all work up from the same basis. The incompetents

cannot omit or forget their painting, glass or other items, and so take work away from more careful or competent bidders.

Sixth, better work and more harmony will result, for the reason that if no part of the work has been omitted, there will be less temptation to "let up" on the work, which usually results in dissatisfaction, if not friction or worse.

Seventh, misunderstandings reduced to a minimum. The bill of quantities is the "interpreter" of what is intended, a sort of clearing house for the drawings and specifications.

Eighth, neither party to the contract can obtain any advantage over the other on quantity or description of work.

Ninth, no disputes with sub-bidders, it being clearly stated what each trade is to furnish.

Conservation of Time.

Tenth, contractors having much less figuring to do can then devote more time and give more attention to buildings in hand, and especially in supervising and directing their sub-contractors, which is much wanted now.

Eleventh, owners and architects would

be less liable to have inferior contractors as the lowest bidders.

Twelfth, fewer extras. These are usually a trouble to all concerned. Should any occur, they can be adjusted easier if the schedule prices govern in such cases.

Thirteenth, the architect or engineer, if he so desires, can have the advantage of collaboration with the professional quantity surveyor, who also would be available when preliminary figures are required, which information is now so often furnished by the contractors, thereby creating an undesirable obligation.

Fourteenth, no change or re-organizing of architects' or engineers' offices necessary, whilst much detail work, now involved when taking figures, will be taken care of by the quantity surveyor's office.

Fifteenth, when contracts are signed, the drawings and specifications will previously have been made as complete as it would be possible to make them, thereby avoiding subsequent inconvenience to the contractor and his foreman on the job, and doing away largely with inquiries at the architect's office by contractors during progress of the work.

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

Garage, 859 Church lane. Albert MacKenan (O), on premises. Thos. J. Carberry (C), Heed Building. Brick, 1 story, 18x80 feet, slag-roof.

Garage, 5444 Sansom street, \$300. Mark Rush (O), 5943 Walnut street. M. Moister Co. (C), 3931 North Fifth street. Iron, 1 story, 16x16 feet.

Building, 209-11-13 North Fifth street, \$35,000. Henry Rahner (O), Fifth and Race sts. Geo. L. Lipps (C), 912 Locust street. Brick, 4 stories, 17x57 feet, slag roof.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 46

PHILADELPHIA
November 15, 1916

As The Editor Sees It

THE complaint that our American urban architecture, while beautiful as to form and ornamentation, lacks painfully in color is heard again, this time from one Jerome S. Blum, a painter but recently returned from the Orient. To an interviewer who waited on Mr. Blum in the interest of one of the daily newspapers that interesting gentleman is quoted as saying:

"A big renaissance is coming in the United States. We are moving that way, but it will not come until we learn to love color, life and gaiety more. Everything is so gray, so drab. Look at an American city. Look at our architecture, huge piles of stones, ugly, uninspiring—the sight pains me. I look to see color in our building; then I shall begin to hope for us!"

"Pink skyscrapers?" interposed the interviewer.

"And why not?" he asked, vehemently. "Everything should be a blaze of color. Artists should design the buildings. Pink notes could be introduced and little green shutters and red roofs and purples—our clothing should be brighter. Men should not go so somberly clad——" He broke off as though the idea was too much for him.

"Something big is coming to the United States as the result of the war," he continued. "Daring spirits will seek encouragement here. We must be sympathetic. Europe is depleted. You ask what of the new art? Well, the art of to-day expresses the life of to-day. Much of it is heretic; chaotic; much of it will not last. It is tentative. A great deal will be discarded. Your little so-called futurists, cubists and vorticists, those who disguise their lack of ability by sensational paintings, are retarding the modern art movement. They are the men who haven't the power to do a real thing and so their works are de-

scribed as 'naïf,' 'chic.' Bah!" Mr. Blum spat out the word disgustedly.

* * *

IF Mr. Blum has his way our architecture will go in strong for color. We shall have skyscrapers in mauve and old rose, country houses to match in shade milady's gown, great modern hotels whose exterior color schemes will follow from season to season the prevailing modes. Our cities will resemble a Persian rug, our suburban communities a riot of contending tints. It will be disconcerting after the drabness and austerity of colonial tradition, but it will be art—the new art,—with a capital "A," and everybody will be happy, including, we may suppose, Mr. Blum.

* * *

IN an editorial note on the need which exists for new elevators in the Philadelphia City Hall, *The Evening Bulletin* observes:

"Three big blunders have been perpetuated in City Hall to demonstrate how little the easy-going commissions who directed the plans for the structure knew of the logic of architecture. The first is in the location of the building as a permanent obstacle planted midway in the city's two most imposing streets. The second is the mansard roof which mars the building outwardly and confuses facades which otherwise might have dignity and consistency. The third is the elevator system crowded into dim and narrow corners while the great wells in the corner towers, where the famous hanging stairways are placed, offer the most practical space for elevators conceivable by the mind of a scientific builder."

After pointing out that the mansard roof cannot be removed and that the City Hall is likely to remain for some years to come on its present site *The Bulletin* suggests that the third of "the three colossal mistakes" may be and should be

remedied in the setting up of an entirely new bank of elevators where these should have been placed at the outset, viz., in the corner towers.

What, pray, in the event of adoption of the *Bulletin's* suggestion is to become of the granite hanging stairways, one of the few, unique and notable features of the city's municipal building? Are these to be scrapped or set up elsewhere or what?

* * *

I HAVE had occasion more than once to quote in these columns from the shrewd, kindly and splendidly informed articles on the building game written by Mr. Theodore Starrett for *Architecture and Building*.

Mr. Starrett's most recent effort carries the caption "Middlemen All" and is fully up to the Starrett standard,—which is saying a great deal.

His theme is that in the game of life as played in the big city we are all middlemen. "The employer in the building trades in particular," writes Mr. Starrett, "is a middleman who would seem to have no friends. To begin with, he is made out of money and about the best thing that a trade union, for instance, can do is to take his money away from him by a successful strike for higher wages. It is true that workmen lay the flattering unction to their souls when they campaign for increased wages that their employers will not have to pay; on the contrary the volume of their business will be increased and their profits increasing with it will be more than ever. Theoretically this may be true; actually it has a chance to be true when a raise of wages is fixed for some future time sufficiently distant to enable the employers to adjust themselves. But the actual fact is that the employers are men who must keep going, and when the increasing cost of everything that goes into building, for instance, is met by the in-

**BLUE
PRINTS**

evitable resistance from the purchasing end—that is from those who buy from the builders, in other words the owners—it produces, as I believe, greater hardships in the building line than in any other.

As I have already said, the building business is subject to a double competition,—the owner or principal hiring an architect or agent who stands between the principal and the builder or contractor, who actually conducts the work. The architect or agent is oftentimes in a delicate position wherein he is subject to misunderstanding and suspicion from his principal. "Sometimes the architect has built up his reputation by his success in getting the builder to do work at a loss and by so manoeuvring as to prevent the builder's ruin from entangling his clients."

* * *

ANOTHER hardship of the building business is very often the difficulty of making settlements. An architect has to give his certificate before final payment is made. The architect is not the actual purchaser, and he feels none of the responsibility toward the contractor that in ordinary business the buyer feels toward the seller. The owner, on the other hand, does not as a rule feel the responsibility that in ordinary business the buyer feels toward the seller because the owner is doing something that he knows nothing about and he depends upon the architect. It is a very common experience for the settlement of a building contract to be delayed for months and sometimes a year or more, waiting for things to be done over again or for small defects to be made good, the retained amount being out of all proportion to the value of work undone.

"The contractor gets no thirty, sixty or ninety days' time from his workmen. It is pay on the dot or strike.

"My sympathy goes out to the employer in the building business.

"And this talk about the middleman is a case of the pot calling the kettle black."

* * *

CHARLES M. SCHWAB does not expect any sudden change in manufacturing condition in this country immediately upon the conclusion of peace in Europe, but if within six months or a year after the close of the war new markets have not been prepared to absorb the production that the war orders have engendered, he fears an industrial collapse will ensue.

"If the war is to continue several years longer, as seems probable, speculation at this time upon what will be prevailing

industrial conditions afterward has a very uncertain basis of fact to start from. But there is a reasonable curiosity as to the prospect of business on the continent of Europe at that time for American building materials, including, of course, steel and other metal products, besides lumber and cement."

* * *

IN France, at least, it is obvious that there must be a large amount of reconstruction. Eight hundred communes have so far been seriously damaged, 2,500 are still occupied by the invaders, together with nine-tenths of the iron mines, and a large proportion of the iron foundries of the country. Until these works are re-established, France will not be prepared to furnish much material of a metallic nature for her own use. Only within the last three or four months has building work been resumed in Paris, and advices from there are to the effect that steel is almost out of the question for private work, and timber is almost double its former price; cement, bricks and all those materials requiring labor, coal and machinery for their production are very costly."

"In consequence, there will be from France immediately after the close of the war, and also from Belgium, a great demand for materials of reconstruction. In Germany and Austria-Hungary there will be extreme need of miscellaneous commodities which America can furnish, even if the war should not devastate their cities as it has the cities of France and Belgium. But ocean freights will continue high after the war, and if the existing customs duties stand, it is doubtful if very many kinds of common building supplies can be delivered to Europe

at much less cost to the consumer than the home products."

* * *

FURTHERMORE, the devastated countries will do their best to protect their own workers and merchants. American manufacturers will likely find that among the new requirements the greatest call from overseas will be for useful specialties, such as cannot be quickly produced abroad, like plumbing supplies and machinery. For those food supplies, raw materials and semi-finished articles which Europe always has required from America, there will, of course, be for a long period of time a multiplied demand. New domestic business should replace whatever falling off there will be in the European steel trade, and to this will be added the miscellaneous trade with other lands that our exporters will have built up in the meantime."

"Many possible contingencies arise when questions are studied at long range. The only thing one can be reasonably sure of is that there will be for a considerable period after the war a continued trade with Europe of extraordinary proportions (even if its constituent parts cannot be accurately foreseen), in supplying the things necessary to repair the material ravages of war. But when that begins to fail, there must be new business to take its place, or there will follow a readjustment of economic affairs not at all to our liking. Some readjustment of commodity prices is inevitable and necessary, but the time when it may be expected is remote and indefinite. In all probability an amount of domestic business will be waiting for the lower scale of prices that will keep the country busy for a further period of years."

EDITORIAL NOTES

Many public improvements are advocated in a printed report of the Permanent Committee on Comprehensive Plans, which has just been distributed. Some of the suggestions have been put into effect since the committee first approved them. These include dividing the city into zones for regulation of buildings, limiting the height of buildings on the Parkway, and regulating the parking of motor cars in the central part of the city. The committee advocates the establishment of a Municipal Publicity Commission, to advertise the city at home and abroad.

* * *

Louis Otto Heiland, secretary of the Board of City Trusts, was the guest of

honor at the regular weekly luncheon of the Master Builders' Association, held at the Builders' Exchange, 20 South Seventh street. Mr. Heiland outlined some of the work that has been accomplished by the Board of City Trusts in recent years. About seventy-five members attended. Thomas Armstrong, a former president of the organization, acted as toastmaster.

* * *

The American Steel and Wire Company has advanced prices 15 cents a hundred, or \$3 per ton, making nails \$2.85 a hundred, plain wire \$2.80, painted barbed wire \$3 and galvanized barbed wire \$3.70.

The \$31,942,000 Bethlehem Steel Company purchase money and improvement mortgage 5s, of which bankers are selling \$16,000,000 at 100½, have ahead of them \$16,949,000 of other bonds. The company proposes to expend \$60,000,000 within four years in extending the properties now under the mortgage.

* * *

Through the recommendation of Mayor Smith the size and character of buildings to be constructed within 200 feet of the Parkway will be determined by the zoning commission and the Fairmount Park Commission, acting jointly.

It is said to have been the desire of the Fairmount Park Commission to permit no building, except a church, to be erected within 200 feet of the Parkway that would be more than 245 feet high and one-third as wide as its height.

Through questions asked by Mayor Smith, who wanted to know what progress the commission is making with the proposed \$4,000,000 Art Museum which is to go on the Parkway, it was explained by Price that three architects of New York City, Arnold H. Bruner, John Russell Pope and B. N. Fennell, had recommended changes in the plans for the building, affecting the architectural design, principally.

* * *

Fire tests of all kinds of building walls and partitions, which are expected to have an important bearing on all fire-resisting building construction, have been arranged by the United States Bureau of Standards. They will be carried out with a newly installed panel furnace recently constructed at the bureau's laboratories, which is the most complete and largest plant for such work ever built.

Details of the tests, such as types and dimensions of partitions, temperature to which they are to be exposed, time of exposure to fire, the water test to which the heated partitions should be subjected and other regulations, have been worked out by a committee representing the American Institute of Architects, the American Society for Testing Materials, the National Board of Fire Underwriters, the Associated Metal Lath Manufacturers, the Gypsum Industries Association, the National Brick Manufacturers' Association, the Association of American Portland Cement Manufacturers, the Fire Underwriters' Laboratories, the American Concrete Institute, the National Fire Protection Association and the National Lime Manufacturers' Association.

As one of the lectures for the Department of Education of the City of New York, Professor Alfred D. F. Hamlin, of Columbia University is giving a course

of public lectures on "The Architecture of Great Cities" at Pilgrim Hall, Manhattan (Broadway and 56th street). The cities on which he will speak and the dates are: Venice, Nov. 13; Florence, Nov. 27, and Paris, Dec. 11. The lectures, illustrated by stereopticon, will begin at 8.15, unless otherwise announced.

Professor Hamlin's course is one of many in a wide variety of fields offered by the New York Department of Education in its efforts to provide instruction for the adult population of the city. Other architectural lectures will be entitled: "A Glimpse at the History of Architecture," "Public Art in Foreign Cities and in America," and "History of Architecture as Seen in New York City Buildings."

The Tenth Chicago Cement Show will be held in the Coliseum, February 7 to February 15, 1917. Less space will be available for the coming show than was devoted to last year's show and this will mean there will have to be a concentration of exhibits and each exhibitor is asked by the management to apply for the smallest amount of space that will accommodate his exhibit, so that the number of disappointed applicants will be reduced to a minimum. The cement companies will probably have a joint exhibit as last year. This will be of an educational nature to increase the interest of the general public in the possibilities of concrete. There will be several other activities connected with the building field occurring in Chicago at the same time as the cement show, such as the annual conventions of the National Builders' Supply Association and the Illinois Lumber and Builders Supply Dealers' Association.

Plans for the beautification of the Parkway, to make it one of the most artistic and magnificent in the country, if not in the world, for its full length from the entrance at Broad and Arch streets to the new Art Museum that will crown the hill at the entrance to Fairmount Park, are announced by Director Datesman, of the Philadelphia Department of Public Works.

The plot of ground from Broad to Arch streets and through to fifteenth will contain a long colonnade and bandstand, while a fountain, costing about \$100,000, surrounded by gardens, will greatly enhance the beauty of the southern end of the Parkway.

On suggestion of the art jury, the statues now scattered around the public buildings will be placed at points of vantage on the Parkway. The statues which it is planned to remove are the

equestrian figures of General Reynolds, President McKinley, the Pilgrim, Muhlenberg, Bullitt, Girard and Leidy.

"Among the striking features of the finished Parkway," said Director Datesman, "will be the Soldiers and Sailors' monument at the intersection of Nineteenth street and the Parkway, for which a sum of \$90,000 is available from the loan approved in 1911.

"Plans are also being made for South Philadelphia and the entrance to the Philadelphia navy yard will be beautified. The overlook facing the navy yard has been planned on artistic lines providing a fitting terminus, with a suitable monument as a crowning feature to the vista along Broad street."

WHAT IS A FACTORY?

Building Managers Draw Up Definition for Labor Law Amendment.

The Executive Committee of the New York Building Managers' Association has drawn up a definition of a factory building which will be offered as a suggestion to the Board of Standards and Appeals, which is planning to frame a proposed amendment to the labor law, defining a factory building. The definition is:

"A factory building is a building in which fifteen or more persons are employed above the grade floor, in any process, or part of a process, of transforming or converting raw material, partly wrought material or imperfect material into forms suitable for use."

One secret that has been fairly well kept is the secret of success. Strange, too, when so many people are anxious to tell about it.

THE FALLACY OF FREE PLANS.

By Noble Foster Hoggson.

When, after many mental flights of enthusiastic exhilaration, a man makes up his mind definitely to proceed with a building operation, the first thing he thinks of is the matter of planning. He knows pretty well what he wants. He has been contemplating the project for a considerable length of time; he has the site and a certain sum of money which he expects to put into the operation. All preliminaries have been decided. He prepares to go shopping.

He has heard of "free" plans. Some one has told him that, by having several sets of sketches made by different architects, he may determine which architect displays the ability to best carry out his ideas and desires. So he gets in touch with a number of architects. He frankly tells each of them that it is a matter of competition, and that the plans which seem to suit his needs best will be selected; that only the winner of the competition will be paid for his work.

Only one of these architects has a chance to secure the commission for the proposed building operation. One of them will win; all the others will lose; and strange as it may seem, the owner has obtained nothing "free."

It is considered unethical for an architect, who is a member of the American Institute of Architects, to submit in a competition, plans for which he is to receive no remuneration. Nevertheless the evil of "free" plans—and it is an evil—still flourishes, more or less openly. This is true, despite the vigorous efforts made by the various State and national architectural organizations, not only to discourage the practice, but to eliminate it entirely.

The owner spoken of above, who thought he had received something for nothing, was like most people laboring under that impression—he had not. Free plans are not free. When the successful architect in this little competition was awarded the commission, the owner assumed the cost that all of the losers had been put to. How? Because through the practice of competition the successful architect in this competition is possibly the unsuccessful member in many other competitions. In other words, the architect receives only one contract in several attempts. It costs him just as much to prepare the drawings for each of the unsuccessful attempts as it cost to prepare the drawings for which he is paid. Therefore, the order he obtains must bear the cost of those he does not get. The owner, in the building operation the architect secures, pays a proportionate cost of all the jobs upon which the architect has wasted his energy.

An owner should pay for one set of plans—his own. Every person who has the desire to build is inspired by an ideal. It is his sincere wish to build enduringly and to attain harmony in building. He begins with the intention of having his building operations conducted successfully, satisfactorily, speedily and economically. To obtain this result, build-

ing problems should be considered as a whole. The plans are a very important matter, but no more so than the other elements that enter later. If the plans are satisfactory, seeming to express the ideas of the owner and serving their purpose adequately, an important question to be answered is whether the intended structure can be erected for the amount that has been set aside for this purpose. And will that amount include the equipment, the furnishings and the decoration? If not, what additional amount will have to be added? Then is the time to decide these matters. The architectural part of any structure is the fixed, dominating element that controls everything else, the element to which everything else must conform. Once settled upon, it cannot be radically changed except at a great expense, and even then, only within certain limits. Decoration, for example, the "final touch," is too often neglected in the beginning, and only provided for upon secondary consideration and with the residue of the fund. This condition always exists where the whole does not extend beyond material arrangement and construction.

After thorough investigation, the building owner should entrust his building operation to someone who by training and experience is qualified to carry out successfully the particular work involved. It should be someone in whom the owner has absolute confidence, and who will concentrate on his problem as a business proposition.

EDITORS AND FIRE PROTECTION IN 1841 AND NOW.

The Assistant Sunday Editor of the New York "Tribune" was good enough to send us the following letter which was written to the New York "Tribune," May 20, 1841:

"Mr. Editor:—As anything relating to the extinguishing or preventing of fires is interesting to a great portion of the community, I take the liberty of suggesting a plan, which, if adopted, would without doubt prevent a fire from communicating to an adjoining building and confine it entirely to the room in which it originated. It is by securing firmly in each room two iron pipes, filled with holes, one of them around the edge of the ceiling, the other near the floor, to connect with the hydrant pipes in the street, have separate stop cocks for each pipe to be placed in some convenient spot on the outside of the building; then, for instance, in case of fire in the second story turn the water into the floor and ceiling pipes of the second story and the floor pipe of the third story. The water from the second story pipe will prevent the fire from getting to the lower stories, and the ceiling pipe will prevent the fire from extending to the adjoining building, and the third story floor pipe will prevent the fire from ascending to the upper stories; thus you will observe the room on fire will be completely surrounded

by water and will prevent its extending to any other part of the building or adjoining ones.

"A MERCHANT."

Horace Greeley was at that time Editor of the New York "Tribune," and he made the following comment on the above letter:

"Our correspondent's remedy would seem pretty efficacious; but would it not cost too much to be generally adopted?"

Mr. Greeley's summary dismissal of this suggestion reminds us somewhat of many of the editorial comments which we see on the matter of fire and fire protection to-day. It would seem that editors, as a class, are too busy with their multitudinous writings to thoroughly study fire protection matters before they write editorials which, unquestionably, have much influence on public opinion in the matter.

It was only a little more than ten years after Mr. Greeley had dismissed this suggestion for perforated pipe systems that the same began to be installed in mutual insurance risks.—"Grinnell Bulletin."

AVERAGE DAY'S WORK FOR THE CARPENTER.

For an eight-hour day a capable carpenter will be able to accomplish any one of the following items, according to an exchange:

Put 400 to 900 square feet of material for a balloon frame; framing and putting up roof 300 to 700 feet, and if placed diagonal half of this.

Horizontal rough sheathing, 700 to 900 feet, and if placed diagonal, half of this.

Matched rough sheathing, 300 to 700 feet, and if placed diagonal, half of this.

Rough roofing about 1,000 feet, and if matched, 800 feet.

Rough flooring, 1,200 feet, and 4-inch matched flooring, 500 feet.

2¼-inch matched hard wood, one room 10 x12, 12x12, 12x14 feet, laying up to base.

Clapboarding, 4-foot, 5-foot and 6-foot lengths, milled ends, 50 to 200 square feet of wall.

These clapboards are 4½ to 5½ inches wide and laid 2½ inches to the weather.

Of 6-inch clapboards, unsquared ends, laid 3¾ inches to weather, the same number of square feet should be laid.

Two thousand to 2,500 shingles on ordinary roofs; compound roof half of this.

Twelve hundred feet on side walls keeps a man hustling all day.

Seventy-five to 100 lineal feet, 4-member cornice; double this for corner strips.

Set eight to twelve window, door or door jamb frames, and fit and hang sash for these four doors with three butts and mortise lock, 2 feet 6 inches by 6 feet 6 inches, and larger.

Will base two members three times as many rooms as he will floor; three members twice as many.

Will fit and hang one pair of sliding doors, but twice as many single doors; will put up track for either of these.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Garage, Allen lane, east of McCallum st., Germantown. Architects, Duhring, Okie & Ziegler, 1218 Chestnut street, Philadelphia. Owner, Francis B. Bracken, Stephen Girard Building, Philadelphia. Stone, 1 story, 38x25 feet, shingle roof, hot water heating, electric lighting, cement floors. Architects have received bids.

Residence No. 16 A, Stenton, Philadelphia. Architect, private plans. Owners, Mauran, Dolman & Co., Franklin Bank Building, Philadelphia. Stone and hollow tile, 2 stories, 38x48 feet, slate roof, hot water heating, electric lighting, oak and pine floors, tile work. Owners have received bids.

Garage, 1714 West Venango street. Architect, J. L. Tomlinson, 4806 North Camac st. Owner, Jas. Hilliard, 1710 West Venango st., Philadelphia. Brick, 2 stories, 42x115 feet, slag roof (heating and lighting reserved by owner), cement floors, metal sash. Owners taking bids, due in about one week. John V. Speth & Co., 1714 Sansom street; H. H. Wehmeyer, 1004 West Lehigh avenue, and Thos. C. Trafford, 1613 Sansom street, are figuring.

Compressor House, Thirty-five and Gray's Ferry road, Philadelphia. Architect, private plans. Owners, Harrison Bros. & Co., Inc., Thirty-fifth and Gray's Ferry road. Brick and steel, 1 story and basement, 39x45 feet, reinforced concrete and slag roof, metal sash, reinforced concrete and maple floors. Owners have received bids.

Foot Bridge, Tulpehocken street, Philadelphia. Architect, private plans. Owners, Phila. & Reading Railway Co., Reading Terminal, Philadelphia. Timber, concrete foundations; 79 feet long. Owners have received bids.

Service Building, Broad and Wood streets, Philadelphia. Architects, Hahn & Wiley, Detroit, Mich. Owners, Packard Motor Car Co., L. J. Eastman, manager; 216 North Broad st., Philadelphia. Reinforced concrete and steel, 8 stories, 78x165 feet, composition roof, electric lighting, metal sash and lath, cement, asphalt and maple floors, waterproofing and dampproofing. fire doors, tile and marble work, ventilators, metal window guards, cabinet work, (1) dumbwaiter, store fixtures, terrazzo work, rolling steel doors (plumbing, steam heating, electric work and (3) elevators and sprinkler system reserved by owner). Architects have received bids.

Church, Germantown, Philadelphia. Architects, Day & Klauder, 925 Chestnut street, Philadelphia. Owners, Second Church of the Christ Scientist. Brick, stone and hollow tile, 2 stories, 177x76 feet, tile roof, cement and pine floors, steam heat, electric light, metal lath, asphalt, waterproofing, fire doors, cabinet work, tile and marble work, safety treads, ventilating system, terrazzo work. Revised plans in progress.

Offices (alt.), American and Willow streets, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, C. J. Matthews & Co., on premises. Brick, consists of plumbing, partition work, composition floors, marble work. Architects have received bids.

Residence (alt. and add.), 116 South Nineteenth street, Philadelphia. Architect, Robt. W. Pollock, 1802 Chestnut street, Philadelphia. Owner, Dr. S. A. Thomas, 116 South Nineteenth street, Philadelphia. Brick, 3 stories, 18x100 feet, tin and slag roof, hard-

wood and pine floors, compoboard, electric lighting, metal lath and sash (tile work and heating reserved). Architect taking bids, due November 17th. E. R. Hall & Bro., 34 South Seventeenth street; F. E. Wallace, 1220 Chancellor street; Thos. Little & Son, 1713 Moravian street, and J. Sims Wilson, 1125 Brown street; Graham Campion Co, Heed Building, Philadelphia, are figuring.

Hospital (alt. and add.), Thirty-fourth and Pine streets, Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Dept. of Public Health and Charities, Wm. Krusen, director, City Hall. Plans in progress. Too early for details.

Factory (add), 939 North Third street, Philadelphia. Architect, private plans. Owners, Royal Pioneer Box Co., 934 North Third street, Philadelphia. Brick and steel, 3 stories, 25x105 feet, slag roof, pine floors, metal sash, fire doors, tile work. Owners have received bids.

School, Sartain and Moore streets, Philadelphia. Architect, J. Horace Cook, Nineteenth above Chestnut street, Philadelphia. Owners, Board of Education, Nineteenth above Chestnut street. Brick and reinforced concrete, stone trimmings, 3 stories, 84x113 feet, composition roof, steam heating, asphalt, cement and maple floors, metal lath and sash, waterproofing, fire doors, ventilators, tile and marble work, hollow tile, weatherstrips, cabinet work (plumbing, heating, electric work, ventilation separate bids). Lowest bidder, Cramp & Co., Denckla Building, \$114,950.

School (alt.), Broad and Jackson streets, Philadelphia. Architect, J. Horace Cook, Nineteenth above Chestnut street, Philadelphia. Owners, Board of Education, Nineteenth above Chestnut street, Philadelphia. Consists of carpenter and mill work (plumbing, heating and electric work separate bids). Lowest bidder, E. C. Durell, 1713 North Twenty-fourth street, \$5,125.

Factory (alt. and add.), 3333-37 Ludlow st., Philadelphia. Architect, Chas. H. Caspar, 925 Chestnut street, Philadelphia. Owners, Supplee Alderney Dairies, 1118 Jefferson street, Philadelphia. Brick, steel and concrete, 3 and 1 story additions, 90x26 feet and 50x56 feet, slag roof, cement floors, metal sash, waterproofing. Architect taking bids, due November 18th. John N. Gill & Co., Heed Building; Warren Moore & Co., Commercial Trust Building; Philip Haibach Contr. Co., Twenty-sixth and Thompson streets; Cramp & Co., Denckla Building; A. R. Raff Contr. Co., 1635 Thompson street, are figuring.

Misdemeanor Court (alt.), Twelfth and Wood streets, Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, care County Commissioners, room 130, City Hall. Consists of granolithic paving and iron fences. Owners taking bids, due November 16th. P. M. Sax, Heed Building; Jas. P. Farrel & Co., 1619 Sansom street, and H. P. Moore, Penn Square Building, are figuring.

Passenger Station (alt. and add.), Cheltenham avenue, Philadelphia. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Penna. Railroad Co., Broad Street Station, Philadelphia. Brick and stone, 1 story, slate roof. Plans in progress. Too early for details.

Passenger Station, Highland Station, Chest-

nut Hill Branch, Philadelphia. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Penna. Railroad Co., Broad Street Station, Philadelphia. Brick, 1 story, steam heating, electric lighting, slate roof. Plans in progress. Too early for details.

Passenger Station (alt. and add.), Chestnut Philadelphia. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Penna. Railroad Station, Broad Street Station, Philadelphia. Brick and stone, 1 story, slate roof. Plans in progress. Too early for details.

Playgrounds (3), Philadelphia. Architect, Philip H. Johnson, Land Title Building, Owners, City of Philadelphia, Board of Education, room 587, City Hall. Consists of grading, walks, etc. Lowest bidders, as follows: Shirley & Frances streets, M. & J. B. McHugh, \$12,900; C and Indiana avenue, Wm. Mundy, \$14,400; Sixth and Christian streets, Wm. Mundy, \$6,200.

Playground, Twenty-second and Sedgley avenue. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Board of Recreation, room 567, City Hall. Consists of swimming pools, shelter buildings, slag roof, brick and reinforced concrete (plumbing and electric work separate bids). Lowest, bidders, Monaghan & Losse, \$25,318.

Post Office (alt.), Ninth and Market sts., Philadelphia. Architect, Jas. A. Wetmore, Washington, D. C. Owners, U. S. Govt., Treasury Dept., Washington, D. C. Interior alterations, metal lath, tile work, dumbwaiter, (plumbing and heating separate bids). Owners taking bids, due November 29th at 2 P. M. Chas. McCaul Co., 1713 Sansom street; F. L. Hoover & Sons, 1023 Cherry street; Newport Contr. & Eng. Co., Newport News, Va.; Algernon Blair, Montgomery, Ala.; N. B. Smyth, 417 E. Thirty-fourth street, New York City; Connors Bros., 64 W. Eighty-eight street, New York City, are figuring in addition to those previously noted.

Paving, various streets, Philadelphia. Owners, City of Philadelphia, Geo. E. Datesman, Director, Dept. of Public Works, City Hall, Philadelphia. Consists of grading and asphalt, vitrified block, granite block and macadam paving. Owners have received bids.

Residences (27), Windrim avenue, between Ninth and Tenth streets, Philadelphia. Architects, private plans. Owners, Penn Realty & Const. Co., Ogontz and Cheltenham avenues. Brick, 2 stories, 16x45 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Owners taking sub-bids on all lines.

Twain Residences, 4 and 6 W. Coulter street, Germantown. Architect, Addison H. Savery, Girard Building, Philadelphia. Owner, J. S. Walker, 228 Manheim street, Germantown. Brick and rough cast, 2½ stories, slate roofs, hot water heat, electric lighting, tile work, hardwood floors. Architects have received bids.

Building (alt. and add.), 1824 Chestnut st., Philadelphia. Architect, W. W. Sharpley, Brown Bros Building, Philadelphia. Owner, Oliver H. Bair, 1820 Chestnut street, Philadelphia. Brick, concrete and steel, 4 stories, 26 x300 feet, steam heating, electric lighting, steel stack, general interior decorations. Plans completed. Architect ready for bids.

Factory (alt.) and Office Building, 1222-24

Ridge avenue. Architects, Bartberger Fisher & Jones, Pittsburgh, Pa. Owners, Parkway Baking Co., Twenty-fourth and Hamilton sts., Philadelphia. Brick, office building, 4 stories, 14x30 feet, slag roof, steam heating, electric lighting, metal lath, maple floors, tile work. Plans in progress. Owners taking bids when completed.

Ice Plant, Twenty-fifth and Morris streets, Philadelphia. Engineers, York Mfg. Co., York, Pa. Owners, Crescent Ice and Coal Co., Fifty-second, below Woodland avenue. Brick and steel, 1 story, 230x56 feet, slag roof, concrete floors. Engineers taking bids. John B. Gill & Co., Heed Building, and P. J. Hurley, 1233 Cherry street; Herman Voight, 1251 North Twenty-eighth street, Philadelphia, are figuring.

Apartment House and Hotel, Philadelphia. Architects, Neubauer & Boyd, 1112 Chestnut street, Philadelphia. Owner, name withheld. Brick, stone, concrete and steel, 8 stories, 80 x150 feet, and 6 stories, 43x160 feet. Preliminary plans in progress. Too early for details. Will take bids in about one month.

Factory, Tacony, Pa. Engineers, Harry C. Eisenbise Co., Pennsylvania Building, Philadelphia. Owners, H. L. Gilmer Co., Tacony, Pa. Brick, slow burning construction, 2 stories, 50x160 feet, slag roof, steel sash. Plans in progress.

Central Flower Plant, Tacony, Pa. Engineers, Harry C. Eisenbise Co., Pennsylvania Building, Pa. Owners, L. H. Gilmer Co., Tacony, Pa. Brick and steel, 1 story, 200 ft. P. capacity. Plans in progress.

Nursery (alt. and add.), 5918 Morton st., Germantown, \$4,000. Architect, Herbert G. Wetherill, 10 South Thirteenth street, Philadelphia. Owners, Morton Street Day Nursery, on premises. Brick, consists of new fire tower, slag roof, cement floors, fire doors. Preliminary plans in progress.

Tube Shop, near Seventy-third and Elm-

wood avenue, Philadelphia. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Pennsylvania Flexible Metallic Tubing Co., Broad and Race streets. Brick, 1 story, 107x44 feet, slag roof, maple and cement floors, fire doors, ventilators. Owners taking bids, due November 15th. E. J. Kreitzburg, 1345 Arch street, and Frank Hall, Seventy-first and Greenway avenue, are figuring.

Factory (alt.), Third and Wood streets, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Janney & Burrough, on premises. Brick and concrete, new elevator shaft, plumbing, skylights, cement floors, ventilators (heating, electric work reserved by owners). Architects taking bids, due November 20th. Loos & Dothard, Commercial Trust Building; John N. Gill & Co., Heed Building; Ketcham & McQuade, 1029 Brown street, Harrison C. Rea Co., 1027 Wood street; Pomeroy Const. Co., 1609 Ranstead street, and H. E. Baton, Twelfth and Sansom streets, are figuring.

Store, 1525 Chestnut street, Philadelphia. Architects, Simon & Bassett, 1112 Chestnut street, Philadelphia. Owners, A. Pomerantz & Co., 34 South Fifteenth street, Philadelphia. Limestone, brick, terra cotta and reinforced concrete, 6 stories, 22x164 feet, slag roof, oak and maple floors, metal lath and metal sash and casements, waterproofing, fire doors, marble work (plumbing, heating, electric work, store fixtures, elevators, decorating reserved). Architects taking bids, due November 22nd at noon. The following are figuring: Irwin & Leighton, 126 North Twelfth street; Doyle & Co., 1619 Sansom street; George F. Payne Co., 401 South Juniper street; Jacob Myers & Sons Co., Witherspoon Building; H. B. Baton, Twelfth and Sansom streets; Metzger & Fisher, Denckla Building; Charles McCaul Co., 1715 Sansom street; Pomeroy Const. Co., 1609 Ranstead street.

Factory (alt. and add.), Second and Columbia avenue, Philadelphia. Architects, Heacock & Hokanson, Bailey Building, Philadelphia. Owners, Keystone Spinning Mills Co., on premises. Brick, steel and reinforced concrete, 4 stories, slag roof, composition and concrete floors, metal lath, fire doors, steel sash, safety treads (power plant, elevators, heating, lighting, sprinkler system reserved). Contract awarded to F. B. Davis, 240 North Sixteenth street.

Manufacturing Building, Milnor and Unruh streets, Tacony. Architects, Wm. Steele & Sons Co., 1600 Arch street, Philadelphia. Owners, Erben-Harding Co., Commercial Trust Building, Philadelphia. Brick, reinforced concrete and slag roof, steam heating, electric lighting, metal sash, waterproofing, fire doors, sprinklers, maple and reinforced concrete floors, rolling steel doors. Contract awarded to Wm. Steele & Sons Co., 1600 Arch street, who are taking sub-bids, due November 14th.

Office Building (alt. and add.), Terrace and Grape streets. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co., 1239 Arch street, Philadelphia. Brick and reinforced concrete, 2 additional stories, 16x48 feet, slag roof, hot water heating, cement floors, electric lighting, waterproofing, fire doors. Contract awarded to Pringle Borthwick, 8018 Germantown ave.

Garage, 1427 North Bouvier street, Philadelphia, \$6,500. Architect, private plans. Owners, Wm. P. & Jas. J. Cochrane, 1036 Olive street, Philadelphia. Brick, 1 story, 45x80 feet, slag roof, steam heating, cement floors, electric lighting. Contract awarded to Conneen Const. Co., 1829 Filbert street, Philadelphia.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted

Contracts Awarded

Scope of Contract and Successful Bidders; "Inside" Information for the Material Man and Interior and Exterior Fitter.

Residence and Garage, Allen lane, east of McCallum street, \$20,000. Architects, Duh-ring, Okie & Ziegler, Bailey Building, Philadelphia. Owner, Wm. Reuss, 431 W. Upsal street, Germantown. Stone, 2½ stories, 70x33 feet, shingle roof, hot water heating, oak floors, electric lighting, metal lath, tile work. Contract awarded to Wm. J. Grubler Co., 219 E. High street, Germantown.

Store and Dwelling (add.), 239 North Sixteenth street, \$1,500. Architect, Herman H. Kine, Sixth and Mifflin streets, Philadelphia. Owners, Marcus & Carunchio, 1512 Arch st., Philadelphia. Brick, 3 stories addition, 7x39 feet, slag roof, steam heating, electric lighting, pine floors, new bulk, tile work. Contract awarded to Morris Hoffman, 1931 South Eighth street, Philadelphia.

Storage Shed, Somerset and Tulip streets, Philadelphia, \$1,500. Architect, private plans. Owners, Phila. Wool Scouring and carbonizing Co., Somerset and Tulip streets, Philadelphia. Steel, 1 story, 150x30 feet, corrugated iron roof. Contract awarded to P. M. Sax, Heed Building, Philadelphia.

Store (alt.), 29 North Second street, Philadelphia, \$2,000. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owner, Harry Fliegelman, 11 North Second street, Philadelphia. Excavating, foundation and cement work. Contract awarded to Lam Building Co., 1001 Wood street.

Garage, 3517 Longshore streets, Philadelphia. Architects, Watson & Huckel, 1211

Walnut street, Philadelphia. Owner, Dr. J. Albert Bolin, on premises. Brick, 1 story, 30 x150 feet, slag roof, steam heating, electric lighting, cement floors. Contract awarded to Wilson Milnor, 4634 Penn street, Philadelphia.

Store and Residence (alt. and add.), 628 Pine street, Philadelphia, \$3,500. Architect, Wm. C. Prichett, 416 Walnut street, Philadelphia. Owners, Stephen Smith Estate, care architect. Brick, 2 stories addition, 18x48 feet, slag roof, steam heating, electric lighting, cement and pine floors, store fixtures. Contract awarded to A. Kirkpichnikoff, 1110 North Forty-first street, Philadelphia.

Factory, Keystone and Cottman streets, Philadelphia, \$2,500. Engineer, H. C. Eisenbise, Penna. Building, Philadelphia. Owners, L. H. Gilmer Co., Keystone and Cottman sts., Philadelphia. Brick and concrete, 1 story, 72 x30 feet, slag roof, cement floors (heating and lighting reserved), metal sash, ventilators. Contract awarded to Nickson Duggan Const. Co., 1218 Chestnut street, Philadelphia.

Residence, Park Line Drive and Hortter st., Germantown, \$18,000. Architects, Savery & Sheetz, Stephen Girard Building, Philadelphia. Owner, Jos. H. Bromley, Jr., 6820 Mower street, Germantown. Stone, 2½ stories, 50x36 feet, wing 22x22 feet, slate roof, hot water heating, electric lighting, oak floors, tile work (plumbing, heating and lighting reserved). Contract awarded to Seeds & Derham, 6314 Wissahickon avenue.

A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And therefore is
A goodly thing to try.

—Ex.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones.
—Exchange.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Electric Convenience

Very often you want a little something to eat or drink in a hurry, or maybe one of the family is taken sick during the night and something is needed quickly. An Electric Chafing Dish, Stove or Water Heater would supply you with whatever you wanted in a few moments, economically and satisfactorily. This is just one of the many electrical conveniences.

Store, 248 South Fortieth street, \$1,000. H. W. K. Co. (O), 248 South Fortieth street. Larry Smith (C), 4007 Chester avenue. One-story rear addition, 20x42 feet, slag roof.

Chair factory, 240 South Second street, \$750. F. Thompson (O), 240 S. Second street. Herman Goldner (C), 425 W. Lehigh avenue. Steam heating system.

Garage, 4312 North Broad street, \$1,000. F. W. Kroessen (O), on premises. John Basden & Bro. 637 North Nineteenth street. Steam heating system.

Store and dwelling, Thirty-first and Page street. Hick Exchange (O), 2014 N. Thirty-first street. N. Bakst (C), 1540 North Sixth street. Flush bulks, repairs.

Two dwelling, 319-21 Laney street, \$800. Agnes Granhelt (O), on premises. Krewsen Pros. (C), 328-30 Franklin street. Repairs to dwellings.

Garage, 750 North Brooklyn street, \$1,400. Mrs. A. S. Butz (O), 750 Brooklyn street. Jos. M. Walm (C), 5556 Arch street. Repairs.

Store and dwelling, 4749 North Broad st., \$450. Patrick Brady (O), on premises. John Borden & Bro. (C), 537 North Nineteenth st. Hot water heating system.

Garage, 1837 North Woodstock street, \$790. Snowden & Co. (O), Nineteenth and Fairmouth avenue. John Borden & Bro. (C), 637

North Nineteenth street. Hot water heating system.

Shop, 141 South Twenty-fourth street, \$800. John Kennedy (O), 1001 Chestnut street. C. Swartz (C), 5703 Chestnut street. One-story rear addition, 17x36 feet, slag roof.

Dwelling, 1111 North Fortieth street, \$1,600. D. Wishmoskey (O), 1116 North Fortieth st. J. Garchov (C), 4116 Girard avenue. Brick, 1 story, 16x13 feet, slag roof, flush bulks.

Kitchen, 2723 Girard avenue, \$400. Morris Colena (O), on premises. Sam Stein (C), 1233 South Sixth street. Brick, 1 story rear addition, 14x12 feet.

Tank supports, Swanson and McKean sts., E. F. Drew (O), on premises. Cope-land Turher (C), 418 Walnut street. Tank supports.

Store and dwelling, 332 North Eighth st., \$900. M. Sussman (O), 318 Market street. S. Bennett (C), 415 Spruce street. Second-story addition, 15x50 feet, slag roof.

Undertaker shop, Fifty-sixth and Spruce, A. H. Chew (O), 1928 Federal street. Cunningham (C), 2016 Alter street. Second-story addition, 16x46 feet, slag roof.

Kitchen, 730 South Eleventh street, \$300. Michael Del Colla (O), on premises. Frank Manfreda (C), 1012 Fitzwater street. Brick, 1 story rear addition, 16x14 feet, slag roof.

Exchange, Seventeenth and Allegheny avenue, \$1,000. Bell Telephone Co. (O), 1631 Arch street. F. L. Hoover (C), 1023 Cherry street. Repairs.

Store, 38 North Sixth street, \$1,000. Mad-dock & Co. (O), 36 North Sixth street. R. C. Ballinger (C), 218 North Thirteenth street. Repairs and alterations.

Dwelling, 1619 South Sixth street, \$450. Jos. Haplan (O), on premises. Chestnut & Co. (C), 528 Reed street. Second-story rear addition, 12x27 feet, third-story, 12x13 feet, flush bulks.

Manufacturing building, Twenty-third and Vine street. Newton Coal Co. (O), Twenty-third and Vine streets. Rus. J. Whiteside (C), 2115 Wallace street. Repairs.

Store and dwelling, 628 Pine street, \$3,320. John Smith Estate (O), 505 Chestnut st. Patrickoff (C), 1110 North Forty-first street. Brick, 2 stories addition, 10x12 feet, slag roof.

One way to escape the income tax is to quit advertising and do less business.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., November 1, 1916.—Sealed proposals will be opened in this office at 3 p. m., November 29, 1916, for the construction of mezzanine floors and certain alterations, etc., at the United States postoffice and courthouse, Philadelphia, Pa. Drawings and specifications may be obtained from the custodian at Philadelphia, Pa., or at this office, in the direction of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 47

PHILADELPHIA
November 22, 1916

As The Editor Sees It

THE *New York Sun* had an interesting little chapter, in a recent issue, on the rising trend of the prices of building material. An extract therefrom follows:

"Buyers of Portland cement are advised of a further advance in the price of this commodity within the near future. The immediate prospective jump will probably be 10 cents a barrel, although conditions warrant an advance of 15 cents. There is talk among manufacturers of putting the price up 25 cents a barrel. The new \$1.77 price does not make up for the increased price of coal. There is no present doubt but that the price of Portland cement next spring will be \$1.40 to \$1.50, mill, making an approximate quotation for this market of \$2 a barrel. This mill price of \$1.40 to \$1.50 a barrel is not record breaking, the highest previous quotation being \$2 and \$2.25, mill, or about \$2.40 to \$2.50 a barrel in New York.

"The sudden stiffening of the price of Portland cement was caused by a further advance in the price of coal.

"The price of wired, rough, ribbed and figured rolled glass has advanced 10 to 20 cents on current lists. Window glass and plate glass are remaining firm and without change in discounts. Stocks are still ragged because the factories have just started up and have made no shipments.

"The price of Hudson River common brick in the market on Saturday a week ago was \$8. The Raritan common brick is out of the market. Richmond brick manufacturers report demand exceptionally heavy. There were en route from Haverstraw one barge on Saturday morning, one barge from Newburgh and six from up river yards. Of this number five were sold before they started, leaving only three for the first of the week, or approximately 1,500,000 brick

to supply New York's demand last Monday.

"Structural steel advanced 1 cent a pound. All iron is higher. Asphaltum in tank cars to contractors is \$17, base. Copper is firmer. There is no change in the price of gravel."

And in the face of conditions such as these investment builders are heard to wonder why it costs so much more money to build to-day than it did five years back!

* * *

DESPITE the steadily advancing cost of material and labor 1916 will go down into history as a record year for building activity.

Building trade activity surged forward in October, and values of buildings permitted for in that month showed a very large gain over October a year ago, a month which in turn showed a very heavy gain over the like period two years ago. Returns to *Bradstreets* from 141 cities roll up a total estimated expenditure never before equalled in that autumn month. Following are the October and ten months' records of building expenditure for six years past:

	October.	Ten months.
1916.....	\$82,951,962	\$847,395,894
1915.....	66,494,787	685,755,778
1914.....	52,535,818	697,223,189
1913.....	66,141,492	759,266,333
1912.....	73,128,886	787,604,000
1911.....	66,746,617	731,762,927

The ten months' expenditure so far outlined, with a number of cities yet to hear from, exceeds that of the entire year of 1915 and is 7.6 per cent. greater than that done in the best year hitherto reported—1912.

A condition for which we have every cause to be thankful.

* * *

AN innocent little item that crept in to the Editorial Notes in last week's GUIDE furnished the first

inkling to many of us of the circumstances that outside architects were again meddling in the matter of a purely Philadelphia project, namely, the design of the new \$4,000,000 Art Museum which is to go on the Parkway. Mr. Eli Kirk Price, in response to a question put by Mayor Smith as to the progress being made upon the plans for the new museum, explained that three architects of New York City, Arnold H. Bruner, John Russell Pope and B. N. Fenner "had recommended changes in the plans for the building affecting the architectural design principally."

THE GUIDE recognizes as clearly as it is possible for any one the eminence, as architects, of the three gentlemen named, but is, for all that, moved to a spirit of earnest and indignant protest.

If Philadelphia had no architects of her own equal to the task of suggesting needful or necessary changes in the Windrim design we should still feel inclined to insist upon the propriety of recognizing local talent. To call in outside skill in face of the many distinguished designers associated with the practice of architecture here in Philadelphia amount to a confession of inferiority that cannot be regarded as other than hurtful, misleading and injudicious, be the underlying motive be what it may. Mr. Windrim's plans have had the enthusiastic approval of architects and laymen. They want nothing whether of dignity, architectural grace or stately impressiveness. Just where New York talent, however eminent, gets a right to offer recommendations affecting a public work peculiarly Philadelphian we are at some loss to imagine. Indeed we regret that our worthy Mayor failed to pursue the subject to an issue determining with some degree of definiteness by whose invitation outside talent was moved to intermeddle.

In the case of the Art Alliance Building we received the assurance that the

selection of a Boston designer was raised above all local consideration by the distinction of the architect chosen in the order of design prescribed. Surely no such condition obtains in the case of the new Art Museum.

Why, then, this belated intrusion of outside skill?

* * *

SOME years back, when the question of advancing the tax rate on realty was once before the subject of popular discussion, THE GUIDE advanced a suggestion that steps be taken to do away with the practice prevalent then as now among real estate men, of concealing the actual consideration involved in the sale and transfer of realty. William S. Vare, now in Congress, at that time Recorder of Deeds, was so impressed with THE GUIDE's suggestion that he was moved to advocate the wisdom of a State law making it compulsory on the parties to a transfer of title to make public the amount of money on which sale was based.

Realty men made a great hue and cry at the revolutionary character of Recorder Vare's stand, going so far as to assert, some of them, that a law such as that proposed, would make it virtually impossible for real estate men to do business. How, they argued, would it be possible for the broker to do business under conditions enabling the buyer to gauge accurately the question of relative values.

The demand for the bill was not pressed, the real estate men were correspondingly mollified and the incident passed.

That it was not forgotten, however, was somewhat sharply brought to mind here the other day when in the course of the tax hearings before Councils Finance Committee, Select Councilman William E. Finley, one of the Vare leaders, charged real estate men with habitually evading information as to property values.

And as an aftermath, now comes the more or less astonishing tidings that the Philadelphia Real Estate Board has decided to go on record in favor of the very piece of legislation against which they inveighed so copiously a few years ago.

In other words, the real estate men are, themselves, now ready to do away with the time-honored practice of hiding the consideration under such terms as "nominal" and are prepared to back a State law bringing about this reform in the passing of title.

* * *

I AM in receipt, from the National Board of Fire Underwriters, of a communication, of more than passing interest, bearing on the importance to

large manufacturing plants of avoiding cheap and uninspected fire hose.

"The importance of knowledge gained from accurate testing, as opposed to guess-work, has just been illustrated anew at Allentown, Pa.," says this communication. "The peculiar circumstances of the case give it a general public interest.

"In the month of October, the Copley Cement Manufacturing Company of Allentown, had a fire in its stone bunker—presumably from a locomotive spark. The bunker was a slow-burning construction, the fire was quickly discovered and the mill fire squad responded promptly; there should have been little loss.

"The fire squad attached a coupling of the plant's expensive new fire hose, ran it to the blaze and turned on the water. The hose burst in five or six places and the fire merely gained headway. The disgusted squad hurried to uncouple the hose and throw in another length, which immediately burst like its predecessor.

"By the time a successful stream was finally secured the fire was burning fiercely. The loss amounted to \$7,000 and was almost entirely due to the failure of the hose.

"Why did the hose burst?

"A \$7,000 blaze is of no great public interest, but the answer to this question concerns everyone.

"Note these points: The hose was not old, but new. The company had not economized by purchasing cheap hose; on the contrary, it is reported to have taken a special measure of precaution—i. e., had specified and paid for hose inspected by the Underwriters' Laboratories.

"It is alleged that the agents of the manufacturers who sold this faulty hose made the false charge that the Underwriters' hose, to a large extent, is 'a game of graft on the part of the insurance companies,' and naturally discrediting the value of the rigid inspection made by the Underwriters' before a label is permitted to be placed upon fire hose by the Laboratories."

* * *

THE incident serves to emphasize the need of proper testing to safeguard the life and property and three important points in connection with this fire deserves consideration:

"1st. The hose in question was not Underwriters' hose. It is reported to have been sold for Underwriters' hose and to have included in the price the Underwriters' charge of one cent per foot for inspection.

"2nd. Before an Underwriters' label may be attached, each length of mill yard fire hose is tested at the hose factory under three hundred pounds pres-

sure by an inspector of the Laboratories, and must be shown to withstand that pressure test before it may be used. The defective hose at Allentown did not bear this label and is reported to have burst at a pressure much less than the three hundred pounds required.

"3rd. The Laboratories' test is the direct opposite 'of a game of graft.' It is maintained under the direction of the National Board of Fire Underwriters in the interest of public safety at a large annual expense to the companies. The charges made for inspection are nominal and the work is not intended to and does not produce a profit.

Any product that can comply with the standard of its tests can secure its label, but no product will be labeled under any circumstances until it has withstood the rigid test necessary to prove its worth in time of need.

"The lessons of this incident are two fold. In the first place, life and property may be, and often are, sacrificed to imperfect fire hose. In the second place, those who wish the security furnished by fire hose tested and passed by the Underwriters' Laboratories must make sure that each length bears a label certifying to such test. Without such label, any statement by any salesman to the contrary notwithstanding, the hose is not 'Underwriters' hose.'"

* * *

IF you would live long, get a job in a paint factory. The danger of poisoning from lead has been overestimated. Examples of men who lived to be one hundred and two years old, working all their lives in paint factories, are proof of the safety of this much-maligned occupation.

Such was the tenor of the testimony which was presented to the members of the State Industrial Board and the State Department of Labor and Industry by representatives of the paint manufacturers of Pennsylvania and New Jersey, in a hearing in the North American Building, to discuss the introduction of health-guarding methods in paint factories, and the regulation of their employees' habits.

Among the paint manufacturers present were A. S. Mahl, E. J. Frysinger, A. J. Hayden, Rushton Marot, Edward T. Longstreth, W. C. Murray and A. P. Wetherill, together with John A. Schaeffer, of Joplin, Mo., who represented Western paint manufacturers. Three members of the State Industrial Board, William Lauder, its secretary; William Young and Mrs. Samuel Semple, were present. Dr. J. S. Spicer, of the State Department of Labor and Industry, and Dr. F. D. Patterson, chief of the department's division of hygiene and engineering, represented that department.

Dr. Patterson, who presided at the hearing, stated that at a preliminary discussion of the subject, it had been found necessary to draw up three separate codes of regulations, one applying to the "corroders," who burn the lead to make carbonate of lead; one for the "grinders," who grind the lead; and one for the dry-color workers. It was found, he said, that these occupations varied so much in their nature that one set of regulations could not apply to all three.

A rumor that the manufacturers in-

tended to test in court any code which might be adopted was denied by Dr. Patterson and several of the manufacturers present. A. P. Wetherill, W. C. Murray and others asserted that the manufacturers have no intention of fighting the proposed legislation, as they desire to protect the health of their employees and are prepared to do so, even though the new regulations entail added expenses. There is perfect harmony, they said, between the commissioners and themselves.

campaign during the national electrical week. This will be observed in every city throughout the country from December 2 to 9.

* * *

Director of Public Works Datesman has awarded contracts for constructing many branch sewers in outlying sections of the city, at a total cost of more than \$100,000. The money will be obtained from proceeds of the \$7,500,000 general improvement bonds sold recently.

The larger sewers are to be located in the following thoroughfares: Mt. Airy avenue, from Lincoln avenue to McCallum street, \$20,000; Eighth street from Northeast Boulevard to Ruscomb street, \$16,100; Sixteenth street from Wyoming avenue to Loudon street, \$16,500; Grange street from Fifth to Seventh streets, \$10,100; and Berkley street from Pulaski avenue to Morris street, \$11,000.

* * *

The Sash and Door Manufacturers' Association of Philadelphia and its Vicinity was formed recently at the Bingham Hotel. Daniel Adams was elected president.

Meeting in the board room of the Philadelphia Chamber of Commerce, the sub-committee of the Committee on Municipal Affairs indorsed the plans for the new city auditorium, and passed a resolution congratulating the Mayor, Director Datesman and the architect, John T. Windrim, upon the thoroughness with which the plans had been developed.

The meeting was presided over by Charles P. Vaughan, one of the vice-presidents of the Chamber of Com-

EDITORIAL NOTES

"Construction work is being carried on in this country at an unprecedented rate," B. F. Affleck, president of the Portland Cement Association, is quoted as saying. "The value of building permits taken out in 112 cities in the United States during the first eight months of the current year totals \$672,448,265, making an increase of almost 30 per cent. over permits taken out during the same period last year. Everything points to a continuance of the present satisfactory conditions and I look for an equally active building season in 1917, if indeed we do not exceed this year's record."

* * *

The United States Government has appropriated \$500 to the American Consul at Lyons, France, for expenses in connection with the display of American catalogues at the Lyons Fair to be held March 1st to 15th, 1917. Any manufacturer who is interested in export business should send his catalogue to the American Consul at Lyons that he put it on file for interested buyers in France who visit this fair.

* * *

Princeton University is considering the establishment of an architectural school. It has been estimated that \$250,000 would be necessary to properly establish the new school, and before the trustees met enough interest had been created in the proposed plans so that a friend of the university offered to give \$50,000 provided the rest of the amount could be obtained by October, 1917. The committee of the board of trustees considering the matter is composed of Henry B. Thompson, '77, chairman; Cyrus H. McCormick, '87; Prof. Howard C. Butler, '92; H. O. Milliken, '05, and President Hibben, ex-officio. At a meeting of the Princeton Architects' Association last June they sent a recommendation to the trustees that a school of architecture be established which would be an enlargement of the present de-

partment of archæology and would make use also of the scientific and technical courses now available at the John C. Green School of Science.

* * *

The London Builder does not anticipate a speedy return to normal conditions, locally, after the war is over. The restoration and rebuilding of the war-devastated countries, which will benefit those who take a hand in it, will swallow up no mean proportion of the available supplies of materials, and this fact, in conjunction with the restricted shipping facilities there will be for some time after the conclusion of hostilities, will tend to keep up the prices of builders' materials which are, of course, very high.

London builders are inserting a clause in their contracts stating that they are based upon prices of materials and the rates of wages prevailing at the time of tendering, and providing that any proved advance in cost unavoidably and exclusively due to war conditions shall be adjusted on the completion of the work, besides allowing an extension of time where delay in the delivery of material or goods is due to war conditions.

CONVENTION TOPICS NAMED.

The fiftieth annual convention of the American Institute of Architects will start a three-days' meeting in Minneapolis, Minn., on Wednesday, December 6.

This convention, perhaps more than any previous one, will be devoted to the consideration of topics of broad public interest. A special session will be given up to a constructive discussion of Government methods in public building work, and another to architectural education in our universities.

The Board of Directors, together with the Minnesota Chapter, invites the architects of the country, as members of the profession and regardless of institute affiliation, to attend the convention and take part in its proceedings.

PENN MEN CARRY OFF FOUR BEAUX ARTS MEDALS.

Students of the University of Pennsylvania School of Architecture "cleaned up" the country in the Beaux Arts competition recently held in New York. First medals were awarded to Lancelot Suckert and R. W. Blaine, both partial architectural students at Penn. The other first place medal was given to a student in the New York atelier of John

Wynkoop, design critic at the University here.

Pennsylvania's second place winners were L. C. Licht and A. P. Goodwin, first-year special students. J. Kuchler, a sophomore, and John Tanner, of the class of 1916, received honorable mentions.

More than eighty drawings from institutions all over the country were submitted. The subject was "A Monastic Church." Pennsylvania entered six men in the contest, and of these four were medal winners. The University's closest rivals, Cornell and Columbia, carried off but one medal each.

Pennsylvania students captured all the honorable mentions in the famous Loeb prize contest, held annually in New York, it was announced. The subject this year was "A Frame for the Original Constitution of the United States." The successful students were F. M. Holcombe, Lloyd Morgan, George M. D. Lewis and R. J. Richardson.

CLEANING TERRA COTTA.

In connection with the walls of a brick building it was desired to clean and brighten the terra cotta trimming, the bricks being of a deep tan color, while the terra cotta was of a light cream that had turned dark and was unsightly from many years' exposure. In answer to this question by a correspondent of the "Painters' Magazine," the latter furnishes the following:

"The simplest way to accomplish this is to mix two pounds of powdered pumice and one pint of liquid ammonia with one gallon of soft soap, applying the mixture to the surface to be cleaned with a fibre wall brush, allowing it to remain about thirty minutes. Then rub briskly with a good scrubbing brush. When on trial it shows that the compound has done its work, clean it off with lukewarm water by using a large sponge and rinse, if possible, with a hose, otherwise with the sponge and a liberal supply of clear water. If after drying the terra cotta appears dull, it may be revived by rubbing it over with a cloth saturated with kerosene oil, which will give it somewhat of a 'sheen.'"

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

If you can persuade people to buy your goods you make money. "The Guide rounds up in its clientele the people you want to persuade. A certain amount of space and the right kind of selling argument does the rest.

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers "stick" year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

Advertise and the world buys of you;
Renig, and you need a loan.
If you never tell what you have to sell,
You'll have troubles all your own.
— 'Los Angeles Evening Herald.'

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

Architect taking revised bids, due November 24th. Pomeroy Const. Co., 1609 Ranstead street; P. Haibach Cont. Co., Twentieth and Thompson streets; H. E. Baton, Twelfth and Sansom streets; F. L. Hoover & Sons, 1023 Cherry street; Ketcham & McQuade, 1029 Brown street; Chas. McCaul Co., 1713 Sansom street, and Geo. L. Sipps, 912 Locust street, are figuring.

Residences (19) and **Garages**, Sixty-first st., Wharton to Latona street. Architect, private plans. Owner, Hugh O. Forbes, 5916 Catharine street, Philadelphia. Brick, 2 stories, 16x50 feet, slag roof, hot water heating, electric lighting, hardwood floors tile work. Owner taking sub-bids on all lines.

Residences (24) and **Garages**, Sixtieth and Columbia avenue. Architect, private plans. Owner, Daniel De Hogan, 5249 Walnut street, Philadelphia. Brick and stone, 2 stories, 16x40 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Owner taking sub-bids.

Residence, southeast corner Washington lane and Ogontz avenue. Architect, Bart Tourison, Land Title Building, Philadelphia. Owner, Edward F. Schwingle, 2637 W. Hagert street, Philadelphia. Stone, 2½ stories, 62x28 feet and 16x20 feet, tile roof, oak floors, hot water heating, electric lighting, metal lath, tile work. Owner will take sub-bids in about one week.

Residence, Gowan and Stenton avenues, Mt. Airy, Philadelphia. Architect, Chas. E. Oelschlager, 1615 Walnut street, Philadelphia. Owner, Henry A. Laughlin, West Chestnut avenue, Chestnut Hill. Stone, 2½ stories, 31x58 feet, slate and tin roof, hot water heating, oak and pine floors, electric lighting, metal lath, tile work. Architect has received bids.

Service Building (alt. and add.), 804 North Broad street, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner, name withheld. Brick and terra cotta, 4 stories, addition 20x100 feet, slag roof, hot water heating, electric lighting, metal lath

and sash, plank and cement floors, tile work. Architect will take bids in ten days.

Residences (35) and **Garages**, Eleventh and Wyoming avenue, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owners, Bieran & Cylinder, 531 Mifflin street, Philadelphia. Brick, 2 stories, 16x56 feet, slag roof, hot water heating, hardwood floors, electric lighting, tile work. Owners taking sub-bids.

Residences (15), Forty-ninth and Brown streets, Philadelphia. Architect, private plans. Owner, Michael Kirschner, 421 Synder avenue, Philadelphia. Brick, 2 stories, 15x40 feet, slag roof, hot water heating, hardwood floors, electric lighting, tile work. Owners taking sub-bids on all lines.

Stores and Apartments, Broad and Loudon streets, Philadelphia. Architects, Magaziner & Potter, 603 Chestnut street, Philadelphia. Owners, Penn Realty and Const. Co., Ogontz and Cheltenham avenues. Brick and terra cotta, 3 stories, 15x79 feet, slag roof, steam heating, electric lighting, hardwood floors. Plans in progress. Owners will take sub-bids soon.

Residences (150), Seventh and Boulevard streets, Philadelphia. Architect, private plans. Owners, Penn Realty and Const. Co., Ogontz and Cheltenham avenue. Brick, 2 stories, 16x45 feet, slag roof hot water heating, hardwood floors, electric lighting, tile work. Owners taking sub-bids on all lines.

Office Building, Frankford Yards, Philadelphia. Architect, Maintenance of Way Dept., Broad Street Station, Philadelphia. Owners, Penna. R. R. Co., Broad Street Station, Philadelphia. Brick, 2 stories, 15x55 feet, slag roof, steam heating, electric lighting, composition, cement and pine floors, tile and marble work. Plans completed. Owners, care Phila. Terminal Division, will take bids in about one month.

Group of Buildings, Front and Federal sts., Philadelphia. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Penan. Railroad Co., Broad Street Station, Philadelphia. Engineer, A. C. Shand, Broad Street Station, Philadelphia. Brick, steel, concrete, plaster, corrugated iron, 1 story, tile, tin and slag roof, steam heat, electric lighting, cement composition and wood floors, metal lath, waterproofing, ventilators. Owners taking bids, due November 29th, at 11 A. M. The following are figuring: John V. Speth & Co., 1714 Sansom street; Metzger & Fisher, Denckla Building; Bailey Lush Co., 201 North Broad street; I. T. Shoemaker, 1324 Walnut street; Frank Mylhertz, McCloskney & Habbs, 1620 Thompson street; Barclay White & Co., 1713 Sansom street; Wm. R. Dougherty, 1610 Sansom street, and Turner Concrete Steel Co., 1713 Sansom street.

Store (alt.), 1520 Locust street, Philadelphia. Architects, Henon & Boyle, 10 South Eighteenth street, Philadelphia. Owners, care Fidelity Trust Co., 325 Chestnut street, Philadelphia. Limestone, 1 story, 21x40 feet, electric lighting, cabinet work, tile and marble work. Architects taking bids, due November 23d. The following are figuring: Stacy Reeves & Sons, 2011 Market street; Hogg Const. Co., 1634 Sansom street; Geo. W. Tipping, Huntingdon Valley, Pa., and E. H. Keefer & Son, 1321 Rodman street, are figuring.

Garage and Apartments (alt. and add.), 703 North Nineteenth street, Philadelphia. Architect, F. T. Uozzell, 147 North Third street,

Philadelphia. Owner, W. A. Dunlap, 701 N. Nineteenth street, Philadelphia. Consists of general interior alterations, rear addition, brick, 1 story, 16x60 feet, slag roof, cement floor, electric lighting, hot water heating. Plans about completed. Architect will be ready for bids in a few days.

Salesroom (alts.), 441-451 North Broad st., Philadelphia. Architect, John L. Coneys, 129 South Fifth street, Philadelphia. Owners-lessee, Hupmobile Sales Corp., 332 North Broad street, Philadelphia. Consists of general interior alterations, new front, tile work, stucco, and plate glass, interior marble work. Plans in progress. Will be ready for bids in one week.

Compressor House, Thirty-fifth and Grays Ferry road. Architects, private plans. Owners, Harrison Bros. & Co., Inc., Thirty-fifth and Grays Ferry road. Brick and steel, 1 story and basement, 39x46 feet, reinforced concrete and slag roof, metal sash, concrete and maple floors. Owners will build.

Sewers, Various locations, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Dept. of Public Works, Geo. S. Datesman, Director, City Hall. Brick and concrete, various sizes, granite curbing, asphalt paving. Owners taking bids, due November 31st, at noon.

Day Nursery (alt. and add.), 5913 Morton street, \$4,000. Architect, Herbert G. Wetherill, 10 South Eighteenth street, Philadelphia. Owners, Morton Street Day Nursery, on premises. Brick, consists of new fire tower, slag roof; cement floors and canvas floors, plumbing, roof garden. Architect taking bids, due November 23d. F. B. Davis, 240 North Sixteenth street; Wm. C. Wright, 22 Harvey st.; F. Elvidge & Son, 5522 Germantown avenue; H. E. Baton, Twelfth and Sansom streets, and Samuel Harting, 20 E. Johnson street, are figuring.

Building alt. and add., 1824 Chestnut st., Philadelphia. Architect, W. W. Sharpley, Brown Bros. Building, Philadelphia. Owner, Oliver H. Bair, 1820 Chestnut street, Philadelphia. Brick, concrete and steel, 4 stories, 26x300 feet, steam heating, electric lighting, steel stack, general interior decorations. Architect taking bids, due November 25th. Lam Building Co., 1001 Wood street, and Thos. Little & Sons, 1713 Moravian street; F. B. Davis, 240 North Sixteenth street, and de Martelly & Co., 1822 Chestnut street, are figuring.

Store (alt. and add.), 3524 Germantown avenue, \$7,000. Architect, Hubert S. Tees, care J. Fletcher Street, 129 South Fifth street. Brick, 2 stories, 75x20 feet, slag roof, hot water heating. Architect taking bids, due November 22d. Pringle Borthwick, 8018 Germantown avenue; John E. Walt, 204 E. Willow Grove avenue, and Geo. S. Roth & Sons, 230 E. Gravers lane; Alexander Caie, 48 E. Chestnut avenue, are figuring.

Lodging House (alt. and add.), 824 Race st., Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, A. Goldberg, on premises. Brick, 3 stories, addition, 40x60 feet, slag roof, hot water heating, electric and gas lighting, yellow pine floors, plumbing. Architect will take bids in about one week.

Altering 2 Buildings for Church, 1235-37 N. Second street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owners, Presbyterian Church, Rev.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Nov. 10, 1916.—Sealed proposals will be opened in this office at 3 p. m. Dec. 26, 1916, for the construction of the United States post office at Frederick, Md. Drawing and specifications may be obtained from the custodian of the site at Frederick, Md., or at this office, in the discretion of the Supervising Architect. Jos. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Nov. 10, 1916.—Sealed proposals will be received at this office until 3 p. m. December 18, 1916 and then opened for miscellaneous repairs, new roof, etc., for laundry building, Bureau Engraving and Printing, Washington, D. C., in accordance with the specification and drawings Nos. 100, 400, and 401, copies of which may be had at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Protection for Lawns and Gardens

ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 48

PHILADELPHIA
November 29, 1916

As The Editor Sees It

IMAGINE yourself, Mr. Architect of the Present Day, being called upon to name the finest buildings in the United States, say, twenty-five years back. Fine buildings were not so plentiful a quarter of a century ago as they are to-day, the skyscraper type, to which we owe so much that is distinctive in our American architecture, being a comparatively recent development. In the *Architectural Record*, Professor A. F. Hamlin gives a list of some of the buildings one might have enumerated had one been asked to name the finest of recent buildings at that time. This list is interesting as showing to what a notable extent we have gained architecturally within the past two decades.

If one had been asked twenty-five years ago to name the finest of recent buildings in America at that time he might have enumerated, says Professor Hamlin, Trinity Church and the nearby terracotta Fine Arts Museum at Boston (now demolished); the County Court House at Pittsburgh, the Albany City Hall, some of Richardson's libraries and his Harvard Law School, the Harvard Memorial Hall, the Connecticut Capitol at Hartford, the Chicago Auditorium, St. Patrick's Cathedral, the Madison Square Garden, the three Vanderbilt houses, the "Villard houses," and the Mills Building at New York, Link's St. Louis railway terminal, and the Ponce de Leon at St. Augustine. Not another church, railway terminal, or library (except Hunt's Lenox Library at New York), not a museum or theatre or town hall could be named of any importance that rose above absolute mediocrity; while in general our civic, Federal and ecclesiastical architecture was beneath contempt, and our railway stations were a disgrace.

There is food for comforting reflection, surely, in the thought that the opulence we are able to boast in buildings that soar beyond the mediocre in our

present-day architecture has all come about within a brief space of time. Professor Hamlin mentions specifically something like twenty buildings. What twenty buildings would the architect of to-day pick to class as the finest of recent examples of successful design?

I am free to confess that, for one, I would welcome a list of the best twenty buildings of the present day if for no other purpose than that of comparison with the list submitted by Professor Hamlin. What twenty structures may be listed as best to-day?

Has no one, competent to pass an opinion, the temerity to essay a try at such a grouping of what is architecturally finest in the buildings of to-day?

* * *

MY attention has been directed to a paper, under the general title "What Can Best Be Done to Advance the Interests of the Engineering Profession in the United States," which was read before the Engineers' Society of Western Pennsylvania by Mr. J. A. L. Waddell. That which gives the paper a special pertinency (in my eyes) is the fact that most of the things predicated by Mr. Waddell as true of engineers are in the same sense and to an equal degree true of architects. An attentive reading of the major premises in Mr. Waddell's argument will make plain just what I mean.

It will be well to summarize the undesirable conditions and the alleged deficiencies in the general make-up of American Engineers, writes Mr. Waddell. Those most commonly recognized or claimed are the following:

A. The importance of the engineering profession is not at all adequately recognized by the general public.

B. Engineers, as a class, are not paid enough for their services.

C. Engineers are not sufficiently often appointed to high executive positions for which their special training and knowledge eminently fit them.

D. In most joint work where a lawyer and an engineer are employed the lawyer is usually given the leading part and the greater compensation and the engineer is forced to fill a subordinate position with small pay.

E. Engineers do not take a proper interest in politics and hence are not given any of the political plums, these going generally to the lawyers and the business men.

F. Engineers are too modest for their own good, hence their great works are comparatively unknown outside of the technical world and often none too well within it.

G. Engineers as a class are lacking in the ability to speak readily and convincingly in public and hence cannot influence the masses or guide their efforts towards the accomplishment of important *desiderata*.

H. Engineers are trained too closely along narrow mathematical and technical lines and not in those which develop them broadly as men and as citizens.

I. Engineers, as a class do not pay sufficient attention to the proprieties, do not dress with sufficient care, do not have sufficient dignity, and rather look down upon a man who concerns himself seriously with such matters of minor importance as personal appearance and the general requirements and trifling obligations of society.

* * *

THERE were other and additional points to Mr. Waddell's indictment but they were of a more restricted applicability. Read "architect" for engineer, in those we have elected to retain, and you gather a fairly accurate statement of some of the reasons for the

surprising absence of popular interest in subjects of an architectural import.

There are exceptions, of course. Any of us will find it easy to name engineers and architects as well who can talk as eloquently in public, who maintain as high an average of civic usefulness, who are as prominent in municipal affairs as their associates in more favorite professions.

But these exceptions suffice merely to prove the rule. In a general sense Mr. Waddell's summing-up of conditions in the engineering profession are based on an intelligent understanding of the facts and his findings are as true of the architectural profession, in the mass, as they are of his fellow engineers.

Philadelphia shines perhaps to better advantage in this respect of its treatment of technical experts than do most great cities. Three of the six directors comprising the Mayor's cabinet are engineers. Architects of repute are not only called into conference from time to time but commissioned to design all municipal work of importance. The Art Jury and Comprehensive Plans Committee are in intimate and constant touch with the best architectural thought of the community.

And yet it is undeniably true that architects as a class do not take the interest whether in politics or in civic affairs that they should, do not mix as freely as do men of other professions in the quotidian activities of the community, do not assert their claims with the skill and adroitness common to representatives of the other professions. Whether this indifference springs from modesty—as Mr. Waddell puts it—a narrowing, preponderating predisposition to the purely technical—due to their training—or to a lack of sympathy with mass opinion, may be left to conjecture.

The facts are as they stand. And one of the first and least dispensible prerequisites to remedial effort must be a frank recognition of the facts.

* * *

NEW YORK has recognized the wide gap that yawns between the public and the architect by establishing a lecture corps and arranging a series of free popular lectures dealing with architecture in the public schools of that city. The Municipal Art Society in that city is also doing a valuable and appreciated work in seeking to bring about a better understanding as between the man in the street and the men who plan and design beautiful buildings.

If Philadelphia is doing anything in the same general line outside of an occasional lecture on an architectural topic, limited to the seating capacity of Houston Hall, we are without definite information regarding it. The moral, we imagine, is not far to seek.

MR. WADDELL regards as of paramount importance in the training of engineers the student portion of the engineer's career. Among the improvements he is moved to suggest are these:

1. Extending the duration of the course from four to at least five, and, preferably, six years; or else the establishment of separate schools for post-graduate engineering work of all kinds.

2. Arousing the enthusiasm of the entering freshman in respect to the profession of engineering, showing them its grandeur and its usefulness to mankind.

3. Inculcation of a love of study and work for their own sake and not mainly because of the money that can be earned thereby.

4. Instruction as to how best to study so as to save time and labor, or in other words, the economics of mental effort.

5. A thorough, elaborate and systematic study of sound business-English, extended over each year of the entire duration of the course.

6. A general broadening of the course of study so as to include thorough instruction in such important lines as economics, history, oratory and business.

7. Making the study of the Spanish language obligatory, and that of any other foreign modern language optional.

8. Improving fundamentally the study of all foreign languages, so that upon graduation all the students thereof shall be able to read, write and speak them fluently, correctly and gracefully.

9. Study of the art of systematization and its application to all lines of activity.

10. Teaching of ethics to engineers.

11. Accumulation of individual libraries, and showing how to utilize them properly.

12. Establishment of better opportunities for acquiring individual scholastic distinction by the students."

* * *

BY way of advancing the interest of the profession after the young engineer has entered upon practice Mr. Waddell suggests:

1. Continuing study after graduation.

2. Buying books and collecting data.

3. Post-graduate work at some leading technical school, and obtaining of advanced degrees.

4. Joining technical societies.

5. Systematization of work.

6. Adherence to professional ethics.

7. Setting an ultimate goal to attain.

8. Writing technical papers and books.

9. Publicity of achievement.

10. Helpfulness to others.

11. Becoming a useful citizen, attaining prominence in the community, and keeping abreast of the times.

* * *

ARE we at fault in inferring that we have here certain fundamentals not less applicable to the profession of architecture—more particularly, may we add, in the rules which Mr. Waddell lays down for the guidance of the young practitioner?

EDITORIAL NOTES

National Complete Building Show will be held in the Grand Central Palace, New York City, March 5-11, 1917.

* * *

The highly trained business man who is nothing more than a business man is a menace to the community because he is cheating it of the co-operation along social lines that it has a right to expect, said Dr. J. P. Lichtenberger, professor of sociology at Pennsylvania, in speaking to the Robert Morris Club, a group of Wharton School students, at 126 N. 18th street.

"Modern college-trained men are twice as efficient as the men of a generation ago," he said. "So far as business ability is concerned, but frequently they multiply our social problems instead of helping to decrease them. The social obligations we have a right to expect from them in good government and health problems in return for the fortunes granted them by society are often disre-

garded if not absolutely perverted. Over-commercialization is the greatest danger of the age. It produces hard, unserviceable men without appreciation of social co-ordination, and without the fund of outside activities that make for good citizenship. The ideal of the domineering superman ought to be an outworn fetish."

Within about three years the Sparrows Point plant will have an annual output of 1,250,000 tons of steel, shipbuilding facilities including accommodations for the largest dreadnought and a thirty-five foot channel connecting with the Chesapeake Bay.

DECAY SPOILING MANY FINE CITY BUILDINGS.

Changes of Temperature, Action of Gases and Other Chemical Agencies Responsible for Blight to Be Seen in Many Places

It is pathetic to meet with so many exhibitions of decay in various kinds of building stone so commonly used in days gone by, and which, so far as that goes, are still more or less in general use. To realize the extent to which decay in stone may go, one needs but walk through any ancient churchyard, such, for example, as that of the famous old Trinity Church, in New York City. All the headstones there, dating from 100 years back, will be seen to be crumbling to dust, and even some parts of the outer walls, which were erected in the year 1813, are in parlous case.

Any one interested in such matters has only to examine the elevations of buildings in this city erected some forty or fifty years ago to be made at once aware of the condition due to so-called "weathering" of the stone work. Evidences of decay in stone are, however, not confined to buildings of ancient date, and even the casual observer will note with regret the blight that has fallen on many noble edifices of more or less recent origin.

To the trained eye of the expert such buildings as the great Public Library, in Fifth avenue and Forty-second street, erected within the past five or six years; the magnificent Metropolitan Tower; that finest of all the churches on the American continent, St. Patrick's Cathedral, and one of the handsomest banking houses in Wall street, erected about two years ago, already display the distinctive marks of incipient decay. Many such structures have in the course of comparatively few years to be patched with unsightly cement concrete. It is more than probable that these buildings, upon which neither thought nor money had been spared, to render them for generations to come monuments of an age of art and progress, will succumb to the ravages of time far sooner than their originators ever expected.

Unfortunately it must be held as an axiom that no reliable means exist whereby decay in stone can be arrested when once it has set in. Building stone, as commonly used, if and when subjected to marked variations of temperature, and also when exposed to vitiating atmosphere incidental to cities and industrial centres, will sooner or later become denatured. As a matter of fact no class of stone is immune, and this statement applies in greater or lesser degree to ordinary limestone, crystalline limestone, magnesian or dolomitic limestone, to the majority of sandstones and even to stones of granitic type. The effect of weathering on granite is well exemplified in the columns, architraves and friezes of the grand old Treasury Building in Wall street.

There are so many divergent agencies under so many varying conditions and circumstances which play their part in the denaturing of stone that it would be unwarrantable to generalize as to the value in respect of durability

of this or that particular class or variety. There are, however, certain unmistakable characteristics which should enable the prospective builder to fairly accurately appraise the probable permanence of a given stone, if and when erected in given localities and under given conditions. There are also certain handy tests for stone the value of which will be appreciated after due consideration of the causes and reasons of stone decay.

In some stones disintegration already commences at a comparatively early date, and stones of this description will assuredly become denatured, at any rate in so far as its surface is concerned, in the course of a decade or so. In other cases initial disintegration is long postponed, and one hundred years or more may pass before serious damage is manifest. The agencies of decay may be classed as organic, frictional, mechanical, chemical and chemico-mechanical.

In large cities the first two named agencies are, as a rule, of little importance, and one may perhaps also safely ignore the washing out of carbonate of lime by fresh rain water. Among organic agencies are various species of lichen (*Verrucaria calcarea*, *Amphoridium dolomiticum*, etc.), and when stone is exposed to sea water various kinds of marine algae are apt to find lodgment thereon. The roots of these lichen often penetrate the surface to a depth of a millimeter or more.

Frictional agency consists principally in abrasion caused by the impact of sharp sand

particles repeatedly driven by prevailing winds against the face of the stone.

In cities it is to the last three mentioned agencies that one has to look for the mischief. So far as the mechanical agency is concerned, it is to all intent limited to deformation due to alternations of temperature, and also to the freezing of water, as and when occluded in the pore spaces or interstices of stone. Contraction and expansion are detrimental in that they loosen the mortar joints, while expansion of itself is serious by reason of the fact that when in an expanded condition and when dry stone is more readily permeable by moisture. The occlusion of water which occurs in the case of so many building stones, with subsequent freezing, is probably the most pernicious and disastrous agency of all.

In tropical and semi-tropical countries stone strongly heated by the rays of the sun and suddenly subjected to drenching with water on the downfall of rain is often found to crack and to craze.

Chemical reactions, due to the influence of gases carried in the atmosphere, affect principally calcareous stones, although sandstones, when the latter are characterized by a carbonate of lime matrix, are by no means exempt from such chemical influence. The gases in question are usually of the sulphurous variety, such as in moist air may be eventually oxidized into sulphuric acid. The action of sulphuric acid on carbonate of lime being to form calcium sulphate, eventually crystallizing as gypsum, serves after a time by means of such chemico-mechanical agency to disrupt the surface of the stone, thereby facilitating further access of the acid moisture.

In manufacturing districts it often happens that nitric acid, hydrochloric acid and in some cases ammonia are also liberated into the atmosphere, all of which when coming into contact with building stone must naturally conduce to decay.

The outpouring from chimneys of particles of carbon and tar serve not only to blacken buildings in the vicinity, but also to some extent act as carriers and holders of the gases aforesaid. It is furthermore of interest to note that fog and mist are more injurious than rain, for not only do they act as carriers or the dissolved gases to the surface of the stone, but stay there, whereas in the case of rain the face of the stone is being continuously washed. Snow carries a higher percentage of such gases than does rain water, and often rests for a long time on ledges and mouldings. Other chemical agencies are salts in solution, which may possibly be present in the earth adjacent to the foundations of buildings.

On reflection it will be recognized that the denser and more homogenous in structure is a stone by nature, that is to say, the fewer or smaller the pore spaces, or interstices, the less is the likelihood of speedy degradation. It is equally apparent that silicious stone is by nature less liable than is calcareous stone to suffer from chemical reactions. Indeed, sandstone will not suffer at all in this particular respect unless the matrix happens to consist largely of carbonate of lime.

Unfortunately, sandstones, with few exceptions, are not homogenous in structure, that is to say, they, like many limestones, are stratified, or by nature built up layer by layer. At the junction of these layers the pore spaces or interstices are generally more numerous and larger than in the body of the respective layers themselves. The result of this is that on occlusion of water, with subsequent freezing, the differing coefficients of expansion throughout the mass inevitably lead to rupture.

Probably the most perfect sandstone known, and in former times used the world over because of its homogeneity of structure, together with the low percentage of lime contained in the matrix, was that found in the Craigleith quarry in Scotland. The quarry in question has unfortunately now been worked out, but so-called Craigleith stone is still largely exported from the district, although by no means the equal in quality to the old far famed Craigleith stone.

In the matter of permanence a dense and homogenous sandstone of the Craigleith variety, in which the matrix would be silicious rather than calcareous, would be the ideal stone for city buildings, if indeed it were possible to find such stone.

Broadly speaking, the following is a reliable table as to the respective ranking of building stones relative to durability: 1. Granite or porphyry; 2. Dense, homogeneous sandstone; 3. Crystalline limestone; 4. Dolomitic or magnesian limestone; 5. Free limestone; 6. Free limestone containing casts of fossils; 7. Stratified limestone and stratified sandstone.

A ready test for porosity or for more or less invisible fractures is the so-called "staining test." The stone to be tested should be first well dried and then soaked for a period of some forty-eight hours in a saturated solution of nigrosin in absolute alcohol. Hydroscopic stones become stained completely throughout, while cracks, cleavages and large pores are shown up clearly by the darker markings.

A number of technical tests exist as to the value of which there is much differing of opinion. For tensional and crushing strains, rate of absorption, freezing and corrosion, it is as well before deciding to adopt any particular stone to submit adequate specimens to some testing form of repute or to some recognized petrological authority. Finally it should be borne in mind that while hardness in stone is always a desideratum the fact must not be overlooked that hardness is often accompanied by brittleness and that the characteristic of toughness is, if anything, of greater importance than is actual hardness.

Toughness is ascertained by dropping a standard weight upon a specially prepared test piece until it breaks. The height in centimeters of the blow which causes the rupture is used to represent the toughness of the stone.

To sum up, the motto of both architects and builders relative to building stone should be "density with homogeneity of structure," and for preference stone of silicious rather than calcareous constituency.—"New York Sun."

Labor means morality. The man who must work hard for a living has no time to run after other men's wives nor to constitute himself a receptacle for highballs. Only the laborers are religious. Leisure has ever been fatal to worship. It is useless to preach salvation to idle people. Remember the camel and the needle's eye.—"Onlooker."

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

Do you get "The Guide" regularly? You should. Better subscribe now, while you think of it, and keep in touch. The man who fails to get and to read carefully the trade paper of his chosen line, is missing a while lot of valuable data that should be at his command.

Of real interest to the owners of real estate in New York City is a matter taken up by Albert Oliver & Son, Inc., and the Octagonal Reinforced Floor Company. The above companies have erected, under the supervision of Professor James S. Macgregor, of Columbia University, and the Departments of Buildings of the several boroughs of New York City, a cinder concrete flat slab on steel frame beams 20 feet by 20 feet center to center. The load test to comply with the regulations of the Building Code of New York City, will be conducted at a time to be named by the Superintendents of Buildings. It is proposed to have present at this test, representatives from many of the greater cities of the United States and Canada, and also representatives from all of the technical schools, engineering societies, builders' associations, and cement and steel manufacturers.

In discussing the matter Mr. Oliver named the following reasons as governing the decision of the Octagonal Reinforced Floor Company for placing their new system of reinforcing on the market in conjunction with cinder concrete: High valuation of land, high cost of labor and material, high cost of upkeep and excessively high taxation.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Nurses Home, Thirty-fourth and Pine sts., Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Dept. of Public Health & Charities, Wm. Krusen, director, City Hall. Brick, stone trimmings, 5 stories, 80x140 feet, slag roof, metal sash and lath, waterproofing and dampproofing, fire doors, ventilators, tile and marble work, hollow tile, elevators, pine and cement floors, weatherstrips, cabinet work, enameled brick, terrazzo work (heating, plumbing and electric work separate bids). Owners have received bids.

Bank Building (interior work), Thirteenth and Market streets, Philadelphia. Owners, Colonial Trust Co., 45 South Broad street, Philadelphia. Architect, Alfred C. Bosson, 366 Fifth avenue, New York City. Electric lighting, metal lath, cement, oak and linoleum floors, hollow tile work, metal lockers, cabinet work, steel doors, ornamental iron, tile and marble work. Architect taking bids. Warren Moore Co., Commercial Trust Building, Philadelphia, is figuring.

Garage, 1314 Callowhill street, Philadelphia. Architect, Wm. H. Wooters, 816 West Allegheny avenue, Philadelphia. Owners, Estate of Frank D. Green, 1413 Vine street, Philadelphia. Brick, 2 and 1 story, 53x140 feet, slag roof, steam heating, electric lighting, cement floors. Owners have received bids.

Laundry (alt. and add.), 5732 Race street, Philadelphia. Architect, H. E. De Hoff, 48 South Sixty-first street, Philadelphia. Owners, White Star Laundry Co., 5732 Race st., Philadelphia. Brick, addition, 2 and 1 story, 48x103 feet, slag roof, cement and maple floors (heating and lighting reserved by owners), metal sash. Owners have received approximate bids.

Twin Residences, 4 and 6 W. Coulter street, Germantown. Architect, Addison H. Savery, Stephen Girard Building, Philadelphia. Owner, J. S. Walker, 228 Manheim street, Germantown. Brick and rough cast, 2½ stories, slate roofs, hot water heating, electric lighting, tile work, hardwood floors. Architect taking revised bids November 27th. In addition to those reported, Chas. H. Fischer, 3654 North eMrvine street, is figuring.

Store and Office Building (alt. and add.), southeast corner Sixteenth and Walnut sts. Architects, Watson & Huckle, 1211 Walnut street, Philadelphia. Owners, Maxwell & Berlet, southeast corner Sixteenth and Walnut streets, Philadelphia. Brick, 1 story, consists of extensive alterations and additions, exterior and interior. Architects taking bids, due December 4th. The following are figuring: Rodyhouse-Arey Co., Fidelity Building; Chas. McCaul Co., 1713 Sansom street; James Johnston, 1721 Ludlow street; A. M. Williams Sons, 419 Locust street; Geo. L. Sipps, 912 Locust street; Metzger & Fisher, Denekla Building; Thos. Little & Sons, 1713 Moravian street, and Graham-Capion Co., Heed Build-

ing; Thomas M. Seeds, Jr., Co., 1207 Race street; I. T. Shoemaker, 1324 Walnut street; Elfretth & Co., 1633 Ranstead street; J. Richard Jackson, Perry Building, Philadelphia.

Group of Buildings, Front and Federal sts., Philadelphia. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Penna. Railroad Co., Broad Street Station, Philadelphia. Engineer, A. C. Shand, Broad Street Station, Philadelphia. Brick, steel, concrete, plaster, corrugated iron, wagon shed office, 15x8 feet; yard clerks office, 16x8 feet; car inspectors building, 21x10 feet; carpenter shop, 25x12 feet; scale office, 9x6 feet; loading and island platform, 210x40 feet; garage, 31x33 feet; and office and toolhouse, 76x24 feet, tile, tin and slag roofs, steam heating, electric lighting, cement, composition and wood floors, metal lath, waterproofing, ventilators. Owners taking bids, due November 29th at 11 A. M. In addition to those reported, F. C. Myhlertz, 1069 Powelton avenue; Roydhouse-Arey Co., Fidelity Building; John N. Gill & Co., Heed Building; Graham-Capion Co., Heed Building; E. E. Hollenback, Fifteenth and Race streets; Dirseoll Const. Co., Stock Exchange Building; F. J. Boas, 201 North Broad street, and Harry Gill, Jr., 2515 Germantown avenue; Sutton & Stephenson, 1317 Washington avenue; J. Sims Wilson Co., 1125 Brown street; H. H. Wehmeyer, 1004 Lehigh avenue, and Pomeroy Const. Co., 1609 Ranstead street, are figuring.

Store House, 1937 and 1939 Moravian street, Philadelphia. Architect, Horace Trumbauer, Land Title Building, Philadelphia. Owner, E. T. Stotesbury, 1925 Walnut street, Philadelphia. Nov. 21st, 1916.

The Sagendorph Company, Inc.,

N. E. cor. 24th & Walnut Sts.,

Philadelphia, Pa.

Dear Sir:

Attention Mr. F. E. Sagendorph, 2nd.

On March 14th, 1916, I placed with you an order to treat with your Saums Preservative the maple floor on the second story of my new factory building.

While you urged the advisability of treating all of my maple floors while they were new and in first-class condition, I will acknowledge that I did not have the confidence in Saums Preservative which you had, but finally agreed to have you treat one floor.

This floor has had eight months' continuous use, and in comparison to the other floors is in so much better condition, having a hard, smooth surface, no open joints, and is so easy to clean, that I am thoroughly convinced that the claims which you made for your material have been proven.

I am very sorry that I did not have the entire building treated when it was completed, but in view of the satisfactory service which the second floor has given us, I want you to start work immediately on the eighth floor.

Yours very truly

Edwin J. Schoettle

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Electric Convenience

Very often you want a little something to eat or drink in a hurry, or maybe one of the family is taken sick during the night and something is needed quickly. An Electric Chafing Dish, Stove or Water Heater would supply you with whatever you wanted in a few moments, economically and satisfactorily. This is just one of the many electrical conveniences.

Be a booster. Boost business, boost the trade, boost your own goods. And don't overlook the fact that the greatest medium ever devised for the boosting process is printer's ink.

For every "one" man you can mention who has succeeded without advertising we'll agree to name ten whose greater success has been due to advertising "direct." Moral Advertise!

The man who is "going to do some advertising next year—maybe" gets his advertising in the end in the shape of an obituary.

The "Builders' Guide" is the OLDEST, and the ONLY Architectural Publication in Pennsylvania.

Where an employee was killed by falling from a scaffold on which he was working in company with an inexperienced and incompetent fellow servant, due to the act of such servant, the trial court was not, under the evidence, authorized to direct a verdict for defendant.—*Concannon v. J. L. Strassel Paint and Roofing Company*, 180 S. W. (Ky.) 86.

The finest automobile will not run when the tank is empty, and the finest space can not pull unless it is filled with copy that grips interest.—"Printer's Ink."

The man "who doesn't believe in advertising" can't understand why the other fellow gets the business.

A hen is the only kind of a critter that can produce something by sitting down and doing nothing.—Exchange.

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

The chap who bags the glittering prize
Is the fellow who learns to advertise

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pippin that there is either something better on the market or your specialty isn't worth a kopeck noway.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted.

A DROP OF INK.

A drop of printer's ink
May make a thousand think.

A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.

It helps your biz',
And therefore is
A goodly thing to try.

—Ex.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

The business man who grudges a commission to an advertising agent who thinks "he can do it himself" is usually about as intelligent as he would be if he grudged the commission of the architect and decided to build his store for himself.

Don't expect outsiders to give you a big rating on a one-inch space.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Nov. 10, 1916.—Sealed proposals will be opened in this office at 3 p. m. Dec. 26, 1916, for the construction of the United States post office at Frederick, Md. Drawing and specifications may be obtained from the custodian of the site at Frederick, Md., or at this office, in the discretion of the Supervising Architect. Jos. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Nov. 10, 1916.—Sealed proposals will be received at this office until 3 p. m. December 18, 1916 and then opened for miscellaneous repairs, new roof, etc., for laundry building, Bureau Engraving and Printing, Washington, D. C., in accordance with the specification and drawings Nos. 100, 400, and 401, copies of which may be had at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 49

PHILADELPHIA
December 6, 1916

As The Editor Sees It

THE question of the adaptability of the new standard documents, touched upon in a recent number of the *Bulletin of the Master Builders' Exchange of Philadelphia*, is the subject of another interesting communication from Mr. William B. King, of Washington, D. C., attorney for the National Association of Builders' Exchanges. This communication, featured in the November number of the *Bulletin*, we have taken leave to reprint because of the widespread interest attached to the subject throughout the building trades.

"I have very carefully considered the recent article in the *Bulletin of the Master Builders' Exchange* headed 'New Standard Documents of Architects Not in Favor,' writes Mr. King.

"The chief objection to the new documents appears to be their length as contrasted with the old Uniform Contract. They are somewhat shorter than the First Edition of the Standard Documents, though about fifteen per cent. of them is entirely new matter.

"It has been pointed out by Mr. William Stanley Parker, Vice-Chairman of the Architects' Committee on Contracts and Specifications, that this difference in length between the old Uniform Contract and the new edition of the Standard Documents is more apparent than real. He says in an article which appeared in the *Institute Journal* of July, 1915:

"The Uniform Contract, however, has a distinct defect in that it omits a large number of general conditions, many of which are quite as important as those included. It has been the custom, therefore, for each architect to draft a set of general conditions, as part of his specifications, thus creating a double set of general conditions, with the inevitable opportunity for duplication and discrepancy."

THERE is a distinct advantage in having varying conditions made in each architect's office. It is much better to have all the conditions embodied in Standard Documents with which architects and builders may become familiar.

A good many years ago, when I had not as much experience in drawing contracts and other legal papers as I have now, I was discussing with a United States judge of some thirty years' experience in construing written instruments the drafting of a certain paper for use in his court. He asked me why I had struck out a number of words from it. I said that it was in the interest of brevity: He said to me: "Mr. King, do not make that mistake in drawing legal papers. An effort to be brief is the source of uncertainty, risk and ultimate litigation. The first paper of a legal paper is to be clear and certain. You must avoid unnecessary verbosity but you should use enough words to express exactly everything needed for your purpose." I have often thought over these words and have long since reached the conclusion that he was absolutely correct and that the greatest possible danger in drawing a contract is to try to make it too short.

It has often been said that it is the duty of a lawyer in preparing a contract to try to anticipate every possible contingency and protect the parties in advance against difficulties arising from things which would be unforeseen by them. If this be true in regard to a contract drawn for one particular occasion between two parties and never to be used again, it is much more true where the effort is to draw a set of conditions which are to be used in thousands of contracts all over the country for many years.

WHEN the Builders' Committee and the Architects' Committee met together to prepare a new set of Standard Contract Documents, I presented these views, but architects and builders declared that they were wrong and that from a practical standpoint the documents should be brief. The documents were under discussion for months and every effort was made to be brief, but in the end it was found that exactness and completeness were more important than brevity. The effort was to make everything as certain as carefully studied words could make it and to include all reasonable contingencies even if this sacrificed brevity. Yet every phrase was considered with a view to omitting unnecessary words. I doubt whether the same ideas can be expressed with substantially greater compression without sacrificing exactness of meaning. Even as it is, very many things were proposed and excluded because they would necessarily expand the documents to too great length.

One of the greatest differences between the old Uniform Contract and the new Standard Documents is that the latter provide expressly for contingencies which were not provided in the former. The Uniform Contract left much to custom or to verbal understanding or misunderstanding which the new form reduces to definite and exact statement.

It is far easier to use a general phrase which has no definite meaning when it comes to a test than it is to write a series of stipulations which will be found to cover the subject when controversy arises over them. But the former invites, and the latter prevents, controversy.

* * *

IT may be that a fair and financially responsible owner, a fair, capable and financially responsible contractor and a fair and capable architect can

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.
125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

safely get along with a very short contract, provided it is reasonably profitable and no unusual conditions arise. The chance of uncertainty, dispute and litigation comes when the contractor is losing money on the job; when the owner is disposed to be unfair; when the architect is one-sided in his views; and when unexpected contingencies arise. There the protection of an exactly expressed contract means much to all parties. I believe that the objection based merely on length will disappear as the documents become better known.

The article in the *Bulletin* adds a specific objection,—that under the new Standard Documents the contractor may be required by the architect to do much extra work for which the owner can repudiate the responsibility. There is a radical difference between the two documents in this respect. Article III of the old Uniform Contract provides for the written order of the architect in making alterations. This implies that the architect has authority to order changes and extras.

The new documents, par. 24, permit changes only by the express authority of the owner and Article 9 limits the authority of the architect to that expressly conferred on him. In this respect, the new Standard Documents are the same as the first edition of the Standard Documents, which proved for an order for extra work "from the owner or from the architect, acting under the authorization of the owner."

I first supposed on behalf of the builders that the architects should have authority to order changes, but the architects objected to such a provision. They said that the owner would not desire to give such authority, particularly in large work, and that the architect would not wish to exercise it and that no items involving extra cost should be put into the building unless the owner himself authorized them. The new agreement, therefore, does not put the contractor in the position of making nonchanges involving extra cost unless he has authority from the owner. There is no ambiguity or uncertainty whatever about the provision. The architect must produce an order from the owner or the contractor must not do any extra work. It does not seem to be very material to the contractor whether the architect or the owner is to authorize the extra work, so long as the proper authority is clearly defined.

Perhaps it is as well for me to point out a few of the advantages to the contractor which the new contract possesses over the old Uniform Contract.

ARTICLE II of the Uniform Contract makes the decision of the architect as to the true construction and meaning of the drawings and specifications final. The architect makes these drawings and specifications and the contractor reads them over and understands their meaning from the words used in their common significance. He signs the contract with this in mind, but finds, upon doing the work, that he has not agreed to do what these drawings and specifications mean to him or any other contractor but what the architect says that they meant to him when he drew them.

Under Article 10 of the new form, the architect is to make decisions upon the meaning of the drawings and specifications, but all his decisions, unless expressly excepted, are subject to arbitration. Many a contractor has lost what was his just due because of the clause above quoted.

Article II of the old Uniform Contract next provides that the contractor is to conform to additional drawings and explanations so far as "consistent with the purpose and intent of the original drawings and specifications." That gives an extremely wide margin for work which the contractor never could guess he was to do from the original drawings and specifications. The new articles provide that additional drawings and instructions must be "true developments" of the original drawings and specifications and "reasonably inferable therefrom." There is a great difference between the additional requirements being "consistent" with the original drawings and their being "inferable from them." In the one case, the contractor is obliged to do anything which is not contradictory to the original: in the other, he cannot be required to do anything unless there was something in the original drawings that notified him that such might be required. Then, too, the Uniform Contract makes the architect, as we have seen, the final judge as to such matters.

* * *

ARTICLE IV of the old Uniform Contract provides for condemnation of unsound work by the architect, but there is no provision for arbitration on this question, as there is under the new Standard Documents.

Under Article V of the old Uniform Contract, if the contractor does not proceed promptly, the owner may provide labor or materials and deduct the cost from the contractor's balance and the owner may terminate the employment of the contractor upon the architect's certificate.

The expense thus incurred by the

owner has to be audited and certified by the architect, whose certificate is to be conclusive upon the parties. There is no provision at all for arbitration on this subject, but the builder is left entirely to the architect's discretion. The new forms provide for arbitration of this, as of all other matters.

Article IX of the old Uniform Contract and Article 21 of the new both require the owner to take out fire insurance for the benefit of all concerned, but the old form does not say how the contractor is to protect himself from insufficient insurance. The new form says that the owner must submit his policies to the contractor for inspection and gives the contractor the right, if the insurance is not sufficient, to protect himself by further insurance and charge this to the contractor, or, if the owner has failed to maintain insurance, it is expressly stated that the contractor may recover his fire loss from the owner. No one will deny the superiority of these provisions over those in the old contract.

Article IX of the old Uniform Contract provides for payments by the owner to the contractor in instalments as the building progresses, but does not fix the duty of promptness upon the architect or provide a penalty for failure to pay promptly on the part of the contractor. Articles 27 and 38 of the new form declare it the architect's duty to issue certificates immediately when due and the owner is to pay them at once. If he does not, he must pay interest and if payment is postponed for seven days, the contractor may stop work or throw up the contract and may recover damages from the owner.

* * *

THERE are in the new documents a number of provisions not the subject of consideration at all in the older ones. Thus Article 3 provides for a schedule by the contractor and the architect fixing dates for the detail drawings and the architect is obliged to furnish them in accordance with that schedule. Similarly, the contractor must furnish a schedule of the dates of submitting shop drawings, of manufacturing and installing materials and of completing various parts of the work. All these things fix the obligations of the contractor and the architect very strictly in such a way that the work can be carried on in a business-like manner.

Article 4 requires the architect to furnish all the drawings and specifications reasonably necessary for the work without charge to the contractor,—a matter about which there have been many disputes in building.

Article 18 makes provision for emergencies affecting the safety of life or

adjoining property and says what each party may or can do under these circumstances,—a very necessary provision for unforeseen conditions.

* * *

THERE is nothing in the old Uniform Contract providing for the mutual responsibility of separate contractors. This is a difficult subject, often involving controversy. In Articles 40 and 41 of the new form it is fully dealt with in a way that is believed to be fair to all parties. The old form says nothing whatever about sub-contractors, whether they shall be permitted at all; whether the owner or the architect shall have choice in setting them; whether the sub-contractors shall bind themselves to do the work in accordance with the contract; or how they shall be paid. Nothing can make more trouble

on a building than differences with sub-contractors and it is of the utmost importance to the progress of building that that their responsibility should be definitely known and their right to pay definitely fixed. This whole matter was submitted to the National Association of Builders' Exchanges at its convention in Columbus, in 1915, and provision in regard to sub-contractors were inserted in compliance with resolutions adopted at that convention.

* * *

IT will be noted that Mr. King favors the new Standard Document as in many and essential ways an improvement over the old. The work of the new documents becomes more apparent," comments Mr. King, "by more careful study and the difficulty of understanding all their provisions will grow less as they are more widely adopted and used."

EDITORIAL NOTES

Though Prof. Paul P. Cret has been engaged with the French troops in the Somme drive, he is "still in possession of all his members," and is in high spirits, according to a letter written on November 5 to his friend and business associate, Albert Kelsey, of this city. "There were terrible days and dangerous days," says Professor Cret in the letter which was received by Mr. Kelsey, and he adds:

"I am sensible of the good opinion that you have, in common with your compatriots, of the effectiveness of our work here. It is a crisis which leaves but few unaffected and which, unfortunately, will not cease with the ending of hostilities. The convalescence will be as dangerous as the disease itself. A multitude of difficulties will present themselves which we ignore now for more urgent matters, but, as your proverb goes, it will be time enough to cross that bridge when we get to it."

Professor Cret left the University of Pennsylvania when the war began and comments on a clipping which referred to him as "Dr. Cret," saying: "When I was a 'Doc' seems long ago."

Professor Cret has seen all sorts of service, and when not in the trenches he is engaged in drawing military maps. These are made from aeroplane photos, which show how the country has been honey-combed by the craters made by big shells. One of these photos, which he sent to Mr. Kelsey, shows the ruins of the town of St. Quentin and a harrowing section of "No Man's Land" between the lines of trenches.

An industrial safety congress has been arranged by the Industrial Commission of New York State, to be held in Syracuse, December 11-14, 1916. The sessions will be held at the Hotel Onondaga. Experts on fire prevention, factory sanitation, safeguarding of machinery, and on other factors entering into industrial safety will be among the speakers. Illustrated lectures by the National Safety Council and the American Museum of Safety will furnish the evening features.

* * *

Boiler and radiator prices were advanced 5 per cent. on October 2d. This follows a previous advance announced on September 25th. It is stated that there is no certainty that further advances in the selling prices will not be necessary.

* * *

New York has been chosen as the place for holding the next "National Complete Building Exposition," the dates being March 5-11, 1917. The exposition will be held in the Grand Central Palace. This will be the second exposition of its kind, the first having been held in Cleveland, O., last February and backed only by local interests. Intended to educate the man-about-to-build, its promoters quickly learned that its first task was to educate the manufacturer and building supply dealer to the wisdom of exhibiting their wares. The New York Exposition, it is stated, while giving quite as much attention to the home building feature, will be broader and more comprehensive in its scope, dealing with the problems of the public and com-

mercial buildings. The offices of the exposition are in the Cuyahoga Building, Cleveland, O.

* * *

J. L. Mott Iron Works, New York, announces that R. K. Bowman has been elected first vice-president and general manager of the company. Mr. Bowman was for many years located at the new company's plant at Trenton, N. J.

* * *

Plans are under way for a permanent building exhibit by the Atlanta, Ga., Builders' Exchange. While the plan is still embryonic, a committee has been appointed by President C. W. Bernhardt to investigate the various angles of the undertaking.

* * *

The most modern and scientifically perfect system of ventilation and illumination will be used in Philadelphia's subways if the provision contained in the transit ordinance introduced by Mayor Smith in council and approved by that body is incorporated in the lease between the city and operating company. The motion of the trains in the Philadelphia subways is usually sufficient to provide the necessary ventilation, provided there are enough air ducts leading to the outside air. In the city's new subways, however, this natural system of ventilation is to be supplemented by motor-driven exhaust fans and motor-driven blowers.

ious situation in its history. This is due to the adoption by the Board of Estimate of a zoning and height restricting resolution. Edward P. Doyle, vice-president of the Realty Notice Corporation, who pays \$8,000,000 annually for taxes on 327 parcels of land valued at more than \$40,000,000, is preparing papers to demand a substantial reduction in valuation on each parcel. He asserts that 40 per cent. of land value has been taken away in a majority of instances without any compensating features in sight.

Harvard Engineering Society of New York will hold its ten annual dinner at the Harvard Club, December 7th. President A. Lawrence Lowell and W. S. Kies, vice-president, American International Corporation, will be among the speakers.

* * *

Webster J. Oliver, who for the past four years has been a member of the law firm of Oliver & McNevin, New York, has given up that connection to associate himself with Hogan & Son, Steel merchants of New York and Philadelphia. For nearly ten years before taking up the law Mr. Oliver was connected with the Oliver Brothers Purchasing Co., New York and Pittsburgh.

* * *

Arthur W. Dean, chief engineer of the Massachusetts Highways Commission, has been elected president of the American Road Builders' Association. William H. Connell, chief of the Bureau of Highways of Philadelphia, was elected first vice-president; Austin B. Fletcher, State highway engineer of California, second vice-president; E. L. Bowers, editor of Good Roads, secretary, and W. W. Crosby, of Baltimore, treasurer.

* * *

Sargent & Co. announce a further general advance of 10 per cent. in their products, immediately effective. This increase embraces generally all items in their Catalog 1065 New, except door checks, advanced November 1st, planes and squares. New prices will be issued in the near future. All orders will be executed by Sargent & Co. at prices ruling when orders are received. The Stanley Works announce that because of the scarcity of material and increased cost, prices on goods of their manufacture have been advanced approximately 10 per cent. Prices heretofore issued have been withdrawn and new ones will be sent out as soon as possible.

* * *

The current quotations for structural steel fabricated and erected ranges from \$85 to \$90 a ton. Few jobs have been taken of late under \$90 a ton, and some fabricators are asking \$100 a ton erected.

Producers are again advancing the price of plan material, notably the Carnegie Steel Company, which has raised its schedule from 2.80 cents to 3 cents a pound.

* * *

A tour of the State by a committee of Bryn Mawr alumnae, detecting fire hazards, resulted today in a resolution being passed by the State Department of Labor and Industry ordering a special inspection of mills and factories with reference to fire hazards. Philadelphia will not be affected, as first and second class cities are exempt. The board also authorized William Young, one of the members, to draft a tentative safety code for the printing industry.

* * *

All previous records of gross earnings by the Pennsylvania Railroad system, are again surpassed by the result for October and also that for ten months of this year. The figures issued are enormous—\$39,091,704 for the month,

being an increase of \$3,119,931 as compared with October 1915. For ten months the total was \$368,464,227, or within \$6,500,000 of as much as the system gross for the whole of last year, and for the ten months period an increase of \$65,543,472.

* * *

The country's incorporations in November involved capitalization of \$275,668,000. This compared with \$243,667,200 a year ago. Companies in eastern cities with capital of \$1,000,000 or more, contributed \$206,407,000 of last month's aggregate. Of this Pennsylvania supplied only \$2,000,000; Delaware, \$133,185,000. The impressive point brought out by the returns was that practically all lines of industry were represented showing the wide scope of existing prosperity. For the eleven months the incorporations of \$1,000,000 companies in Eastern States called for \$2,447,476,500 against \$1,291,142,100 the same period of 1915.

THE RELATIONS BETWEEN THE ARCHITECT AND THE MASTER STEAM FITTER.

By D. Knickerbacker Boyd.

(From an address before the National Association of Master Steam and Hot Water Fitters.)

In the matter of direct letting of contracts, I have read all the literature on the subject, including your own "Report on the Evils of Sub-contracting." I can subscribe to the principal objections which you raise because I know that these evils have existed, but you must not condemn all general contractors. And, after all, what you are aiming to change, it seems to me, is not so much the sub-contracting evil as the sub-estimating principle.

I personally feel that too much stress has been laid on the sub-contracting evil without due regard to any perfectly feasible plan of controlling the estimating. Perhaps you have found this method the means of most quickly checking an abuse rather than the slower process of education.

All branches of the building trades have suffered alike from the "farming" and "huckstering" of sub-estimates and dickering with sub-contractors which is practised by some, but by no means all, general contractors. Sub-contractors who allow themselves to take part in this are equally at fault.

When work is awarded under one general contract, architects can help all the trades and very largely control the whole situation by requiring that a complete list of all sub-contractors be submitted with the estimate, the same to be subject to the approval of the architect and not to be changed without consent after the contract is awarded.

In my practice we invariably do this, to

protect all interests and insure a selection of capable men. But in the case of heating we practically always take the estimates direct, and, whenever possible, do the same with plumbing. We turn over the lowest of these to the general contractors, who estimate with the understanding that they must accept them as sub-contractors' bids if they want the contract.

This gives us the opportunity to carefully select the bidders—a most important consideration. Only the men we deem best qualified to do work of the kind and size in hand are asked, and the number limited to from three to five. This is quite sufficient. Others should not importune for the privilege and so lessen their prestige. Architects should be resolute and not allow any one to estimate who does not do the high grade of work as those selected. This will save disappointments and insure to all an equal chance on the basis of good work. Under these favorable conditions the lowest figure should prevail in the award. Under general and open competitive bidding the low estimate is often to be regarded with suspicion.

In selecting those to whom they will entrust the work, architects ought to inquire and know whether they have the respect and confidence of their associates, as well as whether they are members of their respective associations. In this way architects can help to con-

(Continued on page 807.)

Barrett Specification Roofs

Guaranteed
for
20
Years

We Standardized the Roofs— Now We Standardize the Guarantee!

A DOZEN years ago the introduction of The Barrett Specification standardized roofing practice throughout the country and gave to the old "tar-and-gravel roof" a definite character and reliability.

Local contractors, in the past, have been accustomed to guaranteeing roofs of this type, free of repairs for from five to ten years.

To good reliable roofers such guarantees were no burden because the roof they constructed would last much longer than the guaranteed period.

The fly-by-night roofer, however, did a poor and cheap job, gave his guarantee recklessly—and was generally out of business when the roof leaked or trouble came.

As manufacturers of the materials used in Barrett Specification Roofs we, therefore, determined a short time ago to *standardize these guarantees* and make them of real value to users of Barrett Specification Roofs.

We, therefore, arranged with the U. S. Fidelity & Guaranty Company to issue a 20-Year Guaranty Bond covering every Barrett Specification Roof of 50 squares and over *wherever*

our inspection service was available.

Today this Guaranty and Inspection Service covers all towns of 25,000 population and over and most of the smaller places in the thickly populated parts of the United States and Canada. This means that only 5% of the population is outside the radius of our Guaranty.

This bond takes the place of short-term guarantees formerly issued by the local roofer and obviously is far better.

The principal roofing contractors and architects throughout the country are co-operating with us and we believe the plan is going to be so successful that more Barrett Specification Roofs will be laid the next few years than ever before in the history of the business.

As an evidence of this you will be interested to know that during the first few weeks of its operation, *several million square feet* of Barrett Specification 20-Year Guaranty Roofs were specified and contracted for.

We want to emphasize the point that the Guaranty Bond costs you nothing. *The service is free in the interest of good workmanship and the good repute of our materials.*

Barrett Specification Roofs are recognized today as the standard covering for permanent buildings of all kinds. The cost, per year of service, is less than any other roof covering. They take the base rate of insurance and are approved as "Class A" construction by the Underwriters' Laboratories, Inc.

If you are interested in the proposition we shall be glad to send you further details on request.

A copy of The Barrett Specification, with roofing diagrams, sent free on request.

(Continued from page 798.)

trol the situation and you can co-operate with them in many ways.

In some of the States where the separate contract law obtains, annoyance is often caused because the heating, plumbing and electrical work cannot when desired be incorporated in the general contract for State and municipal buildings. If all the contracts were separately let, and there were no general contractor, the situation would be quite different. So would it be if, after securing separate estimates on the mechanical equipment, in the

manner I have indicated, the contractors for these branches of the work, upon approval as to their fitness, could become sub-contractors to the general contractor. While this would cost the owner more, it would insure a unified responsibility for the completion and term maintenance of the building, and would simplify the course of procedure throughout the work. Under the existing conditions contractors are often working at variance and the way is open for constant dispute and discussion as to interference, delay, responsibility for damage and defects.

How to Obviate Losses Due to Estimating as Sub-contractors.

The contention made by your committee that estimating as sub-contractors to all general contractors involves a loss to the trade is well founded, and worthy of every consideration. The difficulty would, however, be obviated if architects were required to take separate estimates just as at present, under the law referred to, but could have the option of incorporating these into the general contract under proper conditions. Your interest would be fully protected in work of this nature if the general contractor were required to furnish a bond protecting sub-contractors, as, for instance, is required on all municipal work in the city of Philadelphia, and owners and architects would be saved much annoyance and duplication of duties, clerical and supervisory.

The Situation with Reference to the "Standard Documents."

The matter of improving the relations between architects and those entrusted with the execution of their work by no means ceased to engage the attention of architects with the discontinuance of the institute's conference committee. Work was still under way by another and larger committee of the Institute of Architects to bring about better conditions in all estimating and contractual relations in which architects, owners, contractors and others are vitally concerned.

I refer to the committee on contracts and specifications, which finally concluded its most arduous labors little more than a year ago, when, after serious and countless conferences with representatives of the National Association of Builders' Exchanges and many other interested bodies, the second edition of

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**
Tasker Street Wharf, Delaware River, Philadelphia.

the "Standard Documents of the Institute" was issued.

These embrace four papers: "Form of Agreement and General Conditions of the Contract," "Bond of Suretyship," "Form of Sub-Contract," "Letter of Acceptance of Sub-Contractor's Proposal." They cover as fully as is possible the points formerly raised as to the relations of the architect to all parties in interest and the relations of these parties one to the other, including all contractors, sub-contractors and the owner.

Desiring to fortify my position on this occasion with the views of other architects, I wrote several of my friends in different cities, asking for suggestions.

Among the replies received was one from W. Stanley Parker, of Boston, whose great service in connection with the work of the committee to which I have just referred, to the profession of architecture, and all interests allied with it, has everywhere been recognized.

Attitude of New York Contractors Toward "Standard Documents."

The letter has such an important bearing on our relations that I am going to read it to you, and I earnestly hope that it may result in furthering your co-operation. He said:

"Roughly, the situation is this: The men in New York who are members of the National Association are also members of the Building Trades Employers' Association in New York. The committee of the Employers' Association has not approved the documents, and some of the steam fitters in New York seem to agree with objections that the New York Employers' Association have made. The National Association of Master Steam Fitters, however, prior to this action in New York, did approve the documents. An effort has been made to get the National Association to withdraw its approval, but this action has not been taken. The National Association, however, did fail to approve the revised sub-contract form on account of the general situation. I have been all over the situation with one of the men in New York who, thought not on the committee there, has voiced, as I understand it, the general points of opposition that they find.

"The principal objection seems to be that the documents are too long. They seem to fail to appreciate that the value of a standard document is not in its brevity, but its inclusiveness in regard to all of the most general conditions existing in a contract. They seem to feel it is a detriment to have some conditions included which rarely, if ever, occur in their particular work. The fact that the meaning of the standard clauses can be made clear by expert advice, and that they can readily learn what clauses apply to them and what do not, does not seem to appeal to them as being vastly superior to varying general conditions in which they must study, each time, the particular clauses and in regard to

which they really should have expert advice of a lawyer each time.

"They also object to the liability insurance arrangement, but apparently because it costs the owner more. All we want and all we were trying to get was complete protection for the owner at the least expense. If we have not succeeded in doing this, subsequent editions will doubtless change the wording. But additional expense to the owner is no justification for refusal to approve the documents.

"They also seem to think that the documents are available for application only to general contracts. They fail to see the intended and actual adaptability of the documents to any contract, and a heating contract practically always has sub-contracts involved in it, and so is in effect a general contract itself; the form, therefore, applies to their work as direct contractors, if their work is so executed. Doubtless in connection with a heating contract, or electric contract, or a plumbing contract, additional clauses would be needed, as in the case of nearly every building contract, and conceivably some clauses might be entirely crossed out. The fundamental provisions, however, apply. This they do not seem to appreciate.

"They object to what they conceive to be some statements that limit the architect in being the agent of the owner, and feel, apparently, that all provisions of the contract in which the architect is assumed definitely or by inference not to be the agent of the owner are objectionable. They fail to appreciate that for the purpose of carrying on the contract as agreed upon, the architect is definitely accredited the agent of the owner for certain specific purposes, but that for purposes of changing the contract his agency is properly limited, as every owner would naturally insist.

"There also seems to be objection to the fact that it is possible to make changes in the Standard Form, and that changes are even anticipated. They seem to feel that if a Standard Form can be changed it loses its value as a Standard Form. This, of course, appears on the face of it, to us, to be unreasonable, since no standard form will ever be developed that will not be subject to changes to fit individual conditions. Having, however, a complete and full Standard Form, it assists the contractor to observe readily points in which changes are made, the balance of the document being familiar to him without study in each particular case."

Contractors Should Not Pay for Blue Prints in Estimating.

I feel that it is quite right and only proper that, except in the case perhaps of advertised work, contractors should not be required to pay for blue prints for estimating purpose. Heating contractors should also retain one set of their files and records. They are doing their full share in bearing the cost of estimating, which under our present system is but a contribution to our enormous national waste

and a factor in the high cost of building. It has been computed that there is spent in this country each year for the privilege of estimating the sum of over \$85,000,000, more than one-half of which, on a conservative basis, could be saved if efficient methods along the lines of the so-termed "quantity survey system" were generally adopted.

Instead of hopefully waiting for proper methods of estimating to be evolved, let us do our share now in improving them in every way possible. Architects can help greatly in conserving waste of money and human energy in the heating field alone if they will do some very simple things, which I suggest that you can call upon them to do. Some of these are being done by those architects whose first thought is real service to their employers—the

us. One of these is the preparation of clear and complete drawings and precise specifications which lessen the time and risks contractors take in estimating and which convey to them the assurance that they will not, if they secure the contract, be expected to make up for shortcomings of the architect.

I have seen some architects' drawings without figures outside or inside of the plans, and have read some specifications almost as brief as this: "Heat all portions of the building to 70 degrees in zero weather and guarantee these results." Here we have steam fitters, say twenty to thirty, if under the sub-contractor evil, spending their time scaling off every office or room or enclosed area, when all this time could be saved if one draftsman in an architect's office had taken the time necessary to do this work once,—and properly.

In that large number of every-day cases where no consulting engineer is employed, and where you are expected to do your own calculating and engineering, and assume all responsibility for results,—only to be beaten out, if you have figured even conservatively, by some one not so scrupulous, intelligent or careful,—why not refuse to estimate until you are furnished with a reasonable amount of data upon which to base your estimate?

I would urge you, individually and collectively, assuming that you are willing to estimate under these conditions, to insist upon certain basic requirements as a precedent to estimating. Architects can help you greatly if they will become accustomed to putting on every plan both dimensions of each enclosed space,—perhaps even to computing either the area or the cubical contents of each enclosure,—moreover the addition of figures to indicate the area of window and outside door openings would in many cases save much time and handling of prints to refer back and forth from plans to elevations and sections. Can you not take this up and perhaps consider symbols for drawings?

(Will be concluded next week)

Philadelphia is one of the busiest building centers in the United States and "The Guide" is the only medium that touches this golden field.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 50

PHILADELPHIA
December 13, 1916

As The Editor Sees It

SOME interesting figures, showing the advantages of an intelligent minimization of the danger from fire, are presented in a recent number of *The American Contractor*.

"It is stated that New York City in 1915 had 1,010 fewer fires than in 1914, and its aggregate losses showed a decrease of \$2,460,793 from those of 1914. Its per capita loss was \$1.06, or thirty-two cents less than was known before; its loss per fire was \$140.58 less than the lowest previous record. These results are generally attributed to New York's fire prevention bureau.

"Chicago has a Bureau of Fire Prevention and Public Safety with extensive activities. Translated into figures, it appears that Chicago in 1915 enjoyed a decrease of 1,238 in the number of fires and of \$906,605 in total fire losses as compared with 1914.

"Boston's metropolitan district (including the city of Boston and twenty-five neighboring towns) has made a remarkable showing since appointing its Fire Prevention Commissioner in 1914. Comparative figures for the single month of June are as follows: In 1914, 1,337 alarms; in 1915, 935 alarms; in 1916, 605 alarms—or a decrease in two years of sixty-four per cent.

"Cincinnati is interested in fire prevention. Its 1914 figures of 2,138 fires and \$699,473 in losses were reduced to 1,708 fires and \$365,570 in losses for 1915—a reduction of twenty per cent. in the former item and nearly fifty per cent. in the latter.

"Milwaukee now carries on fire prevention work under the direction of its fire department. In 1915 the city had only 1,679 fires, as against 2,361 in 1914—a decrease of twenty-nine per cent. Its total fire losses for 1915 were \$487,009, as against \$777,946 in 1914 and \$953,477 in 1913. Milwaukee is convinced that fire prevention pays.

The above are a few of the bright spots, and represent but the merest beginning of the possible attainments. Fire prevention is still confronted by an enormous task. Momentary enthusiasm because of reductions effected in a few cities is somewhat dampened by the reflection that 1915 saw the enormous total of \$39,591,227 in the single item of dwelling house fires in the United States. Of this amount, \$6,322,813 is directly traceable to defective chimneys and flues—a cause which could have been ascertained and corrected. Fire prevention prevents, but it never will be really successful until the public fully co-operates in this movement."

* * *

HOW discouraging conditions are, due to indifference on the part of the public to preventive measures, is demonstrated by the figures on fire loss for 1916.

Despite fire prevention talks and "safety first" campaigns in all parts of the country, losses by fire during the first eleven months of this year were approximately \$48,000,000 greater than during the same period last year. From January to November, inclusive, this year, the total losses throughout the country aggregated \$209,379,670, as against \$161,959,100 in 1915.

The following table, compiled from records kept by *The Journal of Commerce* and *Commercial Bulletin*, show the losses each month of this year, as compared with 1915:

	1915	1916
January	\$20,060,600	\$21,423,350
February	13,081,250	24,770,770
March	18,786,400	38,680,250
April	18,180,350	12,681,050
May	11,388,450	15,973,500
June	10,893,950	12,247,500
July	9,006,800	23,013,800
August	10,067,100	10,745,000
September ...	14,823,500	12,244,625

October	14,465,850	17,701,375
November ...	21,204,850	19,898,450

Total\$161,959,100 \$209,379,670

There were 281 fires during November, each of which did property damage to the extent of \$10,000 or more. Twenty-three fires in the month caused losses in each instance of at least \$200,000. The largest fires were:

Donnelly, Minn., bus. section..	\$300,000
St. Paul, Minn., lumber yard..	512,500
Norfolk, Vr., furn. warehouse..	300,000
Ithaca, N. Y., salt works.....	500,000
Chicago, Ill., freight yards....	500,000
Muncie, Ind., iron works.....	300,000

* * *

EDITORIALLY the *Journal*, of Jamestown, N. Y., in a recent issue, discussing that city's new building code, says:

"Insurance rates are too high in this country because of the careless construction of past generations. In every American city the business streets are filled with fire traps that require large expenditures in insurance premiums, on the part of the owners and frequently cause the insurance companies large losses. If in past generations more attention had been paid to the methods of construction the insurance rates would be lower and the losses less.

"And it should be remembered that the public generally has to help for these conflagrations. Insurance companies to remain solvent must charge a high premium to offset losses and consequently the householder in the suburbs is affected by the losses caused by conflagrations in the business parts of the cities of the country. Anything which will diminish these losses will eventually result in a reduction of insurance premiums.

"For illustration let us assume that the buildings of the business section of every city in the United States were of the best

**DRAWING

**BLUE
PRINTS**

fire-proof construction. It would mean a reduction of millions of dollars in the losses the insurance companies are compelled to pay annually and this reduction would enable the companies to fix a much lower rate on residence property. In short, it would save the people of the United States many millions of dollars, for indirectly the people pay the losses caused by fire. They pay because every householder must have the insurance and the insurance companies are obliged to charge a high enough premium to make good all the losses. Those who live in rented property pay their share because the insurance premiums are a part of the expense of maintenance of the building."

* * *

A LECTURE on "Colonial Architecture and Colonial Architects," delivered by Professor Fiske Kimball, of the University of Michigan, before the Pennsylvania Society of the Archaeological Society of America reviews a number of interesting facts relating to the earlier phases of American architecture. Said Professor Kimball, in part:

"The Colonial period in the United States closed, of course, with the Declaration of Independence, yet many of the finest buildings which are called Colonial came after the Revolution. Among these are the famous designs of Bulfinch, of Boston, and of McIntire, of Salem, as well as the tall-columned houses of the Piedmont region in Virginia.

"Three periods may, indeed, be distinguished in 'Colonial architecture.' The work of the seventeenth century was an offshoot of the medieval cottage architecture of the various medieval countries of the colonists—simple, informal, rudimentary as the struggle with the wilderness. The work of the eighteenth century, down to the Revolution, shows the adoption of the Renaissance forms of detail, the striving to conform to the style of Sir Christopher Wren in England.

"On the resumption of building after the Revolution began an effort to make buildings more monumental and more classical, to make them national in character rather than provincial. During this 'Early Republican' period contrast between the conservatives and the radicals was marked. One group clung to the old traditions and produced works which may well be called 'post-Colonial.' The other group tried to give American buildings that Roman or Greek magnificence which was the aim of the contemporary 'classical revival' abroad.

"The men who designed our early buildings are by no means all nameless and forgotten craftsmen. At first, to be sure, men had to build their own houses,

and later many a masterpiece of beautiful simplicity was raised without drawings by obscure carpenters imbued with the fine traditions of their craft. From early in the eighteenth century, however, in the case of important buildings, an effort was made to obtain more elaborate design, and we find men whom we may designate as architects whose personality is of much interest.

"The first of those to attempt to bring our buildings into accordance with European standards were cultivated amateurs like Governor Francis Bernard, of Massachusetts; Andrew Hamilton and Dr. John Kearsley, of Philadelphia, and, later, Thomas Jefferson. They derived their knowledge largely from the numerous architectural books of the period. Two of the best known of the early architects, Charles Bulfinch and William Thornton, were thus self-trained, and they remained amateurs in spirit, even though they took money for their services.

"By similar study there arose, from the craftsmen, a group of carpenter-architects, who both designed their buildings and helped construct them. Among these were such gifted men as McIntire and Samuel Rhoads, of Philadelphia. Finally there began to come to this country architects of regular professional training. Some believe the pioneer of these to have been Peter Harrison, of Newport, author of a series of exceptional designs. The French engineer officers, like L'Enfant, had some architectural training and a fund of foreign observation.

"With the establishment of the Federal Government appeared men like Stephen Hallet, Benjamin H. Latrobe and Joseph Mangin, men of the highest experience and talents, who brought our Colonial style to a close, and established the early architecture of the nation on monumental lines worthy of a new republic."

* * *

THE annual exhibition of the Architectural League of New York, the banner event of the year in the architectural world, will be held at the building of the American Fine Arts Society, 215 West Fifty-seventh street, New York city, February 3 to 24, inclusive.

The exhibition is illustrative of architecture and the allied fine arts. It will consist in drawings and models of proposed or executed work in structural, decorative and landscape architecture; sketches and finished examples of decorative painting; sketches, models and finished examples of decorative and monumental sculpture.

The committee, in its circular of information, particularly directs the attention

of architects to the following statement which it makes in the hope that a clear understanding of its policy may inure to the benefit of exhibitors and to the success of the exhibition.

"The effect of the exhibition as a whole is of the highest importance. The general impression made upon the visitor is stronger than that made by individual exhibits. To produce this impression it is obvious that the walls of the galleries should present an orderly and harmonious appearance. Exhibits containing large areas of white paper or having white or light-colored mounts conduce to a spotty and disorderly general effect. Exhibitors are therefore advised that such exhibits are likely to be poorly hung or not at all; and in case such are submitted, the committee reserves the right to remount or modify the tone of the mounts of any such accepted exhibits at the exhibitor's expense."

For detailed particulars regarding the exhibition address Charles W. Leavitt, 215 West Fifty-seventh street, New York City.

The league also has issued a circular of information regarding the competition for the Henry O. Avery prize for sculpture, for which \$500 is offered by the late Mrs. Samuel P. Avery in memory of the late Henry O. Avery, and a special prize of \$300 for the best design submitted by an architect, sculptor and mural painter in collaboration.

The subject of competition calls for "A Triumphant Arch, Commemorating the Renaissance of Peace." It is to be located in a public square of a large city, formed at the intersection of wide avenues. Competition due January 17, 1917.

* * *

CONTINUED advances in the prices of building materials has not so far stifled contemplated building operations," said the *Dow Service* recently. On the contrary, builders see no immediate abatement of the price trend, and in order to get operations under way in the spring, summer and fall of 1917 are placing orders now so as to get assured action on jobs at the earliest possible moment.

The week just closed developed many price changes. Common Hudson brick moved to \$9, with some bringing \$9.25. Second-hand brick was quoted at \$5 a load of 1,500. Raritan common brick is not being quoted for delivery in this market because it is not possible to get men enough to load the barges at Sayreville. For the New Jersey distribution the price is around \$10 a thousand, loaded on cars. Newark yard prices are reported as high as \$11.50 and \$11.75 a thousand.

Portland cement in wholesale prices showed no change, but contractors were

quoted by at least one company as the week closed at \$2.25 a barrel. Rosendale natural cement has so far made no change from the 90 cent level.

Sheet copper, hot rolled, advanced from \$39.50 to \$41 and \$42. Glass manufacturers, meeting here, report the glass shortage as being extremely acute, and one manufacturer has been compelled to close his plant because of lack of fuel. Laborers accustomed to dig glass sand at \$2 a day now want \$5, and if they do not get it they apply at the steel mills, where they get from \$5 to \$7 a day.

Architects and contractors are advised of an immediate 10 per cent. reduction in current discounts off jobbers' lists, with actually no limit as to the possibility of prompt future advances. Glass manufacturers are taking only such business as is wholly acceptable to them. There is no immediate change in the price of plate glass contemplated.

Structural steel was advanced from 2,696 to 3,169 a pound. Pig iron advanced from \$25.50 to \$26.50 for No. 1 X foundry. Northern to \$28 to \$28.50. Other grades are in proportion.

* * *

THIS is the time of the year when brick dealers stack for winter reserves. Normally 50,000 brick ridden from a barge to stack or jobs is considered a good day's movement. On Friday there was such a rush for brick following the day of rain that one deal-

er rode 141,000 brick. Winter is rapidly approaching, with little brick stored available for building requirements. Another condition making for abnormally high brick prices is that transportation companies are offering as high as \$10 and \$12 a day for brick barges to take care of freight movements in the harbor and to offset the demurrage charge by railways for use of cars on sidings. This is creating a shortage in barges, and with a shortage of labor to load brick barges it is more profitable for barge owners to rent out their barges this winter than to use them for carrying brick down the river or to permit storage of brick here in the usual quantities.

There were only 24,000,000 bricks in the market on Saturday morning, and only 12,000,000 en route to start the week with. About 8,000,000 of these brick were sold before they left the brickyards.

The Portland cement situation for the first fifteen days in November showed that the larger companies were shipping from 17 to 71 per cent. more cement than they did during the same time in 1915. Some of the smaller companies showed remarkable increases, the Cayuga reporting over 400 per cent. gain, while the Glens Falls and Penn Allen show 30 to 32 per cent. increase. In the light of conditions like those throughout the country, Louisville advises that before the year closes cement prices will be 20 cents a barrel above present quotations.

EDITORIAL NOTES

At a meeting of the Art Club of Philadelphia nominations for officers were made as follows: President, Thomas H. Fenton; vice-presidents, William M. Coates, George W. Elkins, George Gibbs and Leslie W. Miller; treasurer, William Krafft; secretary, Samuel W. Cooper.

* * *

Formal dedication of the new \$250,000 Ceramic Engineering Building of the University of Illinois took place at Urbana on December 6 and 7. Many prominent speakers, including Governor Edward F. Dunne, W. L. Abbott, president of the Board of Trustees; Dr. S. W. Stratton, director of the U. S. Bureau of Standards, and Claude Bragdon, author and architect, addressed the several meetings. The Ceramic Engineering Building is a three-story structure, covering a ground area of 67 by 189 feet. It is constructed of materials which are representative of the ceramic arts, such as high-grade brick, tile, terra cotta, cement and gypsum products. Its laboratories are equipped with the latest

types of apparatus needed for instruction and research in the manufacture of stoneware, china, brick, tile, sewer pipe, terra cotta, cements, glassware, sanitary ware, electrical and thermal insulating materials and other ceramic products.

* * *

Irwin & Leighton, builders of Philadelphia, have been awarded a contract for improvements amounting to about \$900,000 at the plant of the Bethlehem Steel Corporation at Sparrow's Point. This sum is a part of the \$50,000,000 which Charles M. Schwab has promised to spend making Baltimore the biggest steel and shipbuilding center on the Atlantic seaboard, and as large as any in the United States.

The improvements consist of an extension to present gas-driven blowing house, the erection of another such building and also a gas-driven electric engine plant. Work on the structure will be started at once.

* * *

American Steel & Wire Co. has ad-

vanced prices of wire products \$3 per ton effective at once, making wire nails \$3, plain wire \$2.95. The advance was made necessary by the recent advances of \$4 per ton in steel bars. Wire rods are also strong and higher, but no official price is given; at the same time, the American Steel & Wire Co. will accept no orders under \$60 per ton, whereas a few weeks ago, large sales were made at \$57.50. Export contracts for rods have been taken recently at between \$70 and \$75 per ton and the demand is far from satisfied.

The advance in price of wire products is the second change in schedule by the largest interests this month. The previous advance of \$3 per ton was announced by the American Steel & Wire Co. on November 4, making the total advance this month \$6 per ton.

* * *

The Baltimore and Ohio Railroad and South American capitalists are forming a \$15,000,000 steamship line to ply between Baltimore and South American ports.

given the city \$3,000 for the privilege of tearing down the building and selling the materials.

As fast as the building is being dismantled, the lumber and other material are being sold direct to builders and hauled away. Part of the roof was transferred to a garage under construction. North Carolina pine lumber, advancing in price 100 per cent. since Convention Hall was constructed four years ago, is being eagerly taken by builders. When bids were first submitted by contractors for the demolition of the hall, one man asked the city \$14,500 for the job.

* * *

The Musical Art Club will begin the erection immediately of a handsome club house at 1809-17 Ranstead street, which will contain the finest musical auditorium of its size in Philadelphia. Plans for the building were approved at a meeting of the club, in the quarters at Seventeenth and Chestnut streets. It is to be ready for occupancy next October.

Funds for the purchase of the properties, amounting to \$25,000, and for the construction of the building, \$40,000, are already available. It will have four stories, with a roof garden. The first floor will contain reception and lounge rooms, the second and third the auditorium, with 350 seats, and the fourth, billiard and meeting rooms.

FIFTY-THREE YEARS IN BUSINESS

The fine, old paint and varnish house of Felton, Sibley & Co., Inc., one of the commercial landmarks of Philadelphia, has been fifty-three years at the northwest corner of Fourth and Cherry streets, where, in observance of the formal opening of its splendid new building, the firm has arranged to receive its patrons and friends at a luncheon and inspection to be held on the 13th. The present officers of Felton, Sibley & Co. are J. Sibley Felton, President; Walter G. Sibley, Vice-President; Horace S. Felton, Second Vice-President; Howard B. Felton, Treasurer; Alex. D. Graff, Assistant Treasurer; J. Robinson Silver, Secretary, and Charles E. Shel-drake, Assistant Secretary.

THE RELATIONS BETWEEN THE ARCHITECT AND THE MASTER STEAM FITTER.

By D. Knickerbacker Boyd.

(From an address before the National Association of Master Steam and Hot Water Fitters.)

(Continued from last week)

And in the matter of incomplete and indefinite specifications or of those equally as bad, imposing conditions or guarantees impossible to provide,—even if they have been prepared merely in accordance with the routine of an antiquated custom,—why not return them to the architect or the engineer responsible for them and frankly state your reasons for not estimating? Be courageous and do this for the good of the cause!

Obviously the architect who makes every heating contractor perform gratuitous calculating and engineering saves himself time, labor and cost, and transfers these not to one but to a large number of heating contractors—and, eventually, to the owners.

And yet one of the singular factors in this condition of affairs is that the trouble often begins with the owners, who too often do not select their architects on the basis of competency and integrity. After allowing for the younger and inexperienced men who are selected on the basis of friendship or otherwise and should be given every practical assistance possible by associations of their fellows and of others in the crafts the facts are that many architects who render full and proper services are the ones who charge a greater fee than those who do not, or rather, I should say, those who do not render or do not expect to render the nicer and fairer and, in the end, the more economical service, do not charge the owner as much as those architects who do. Unfortunately some owners give too much consideration to the question of fee in selecting their architects and do not always discriminate between the kinds of service, where the recollection of the quality will remain long after the fee is forgotten. You heating men have the same thing to contend with, so you know all about it, but the owners do not discover their mistake until it is too late.

Of course, for all work of any size, for power plants, and mechanical equipment and for work of a specialized nature, it is to be presumed that the services of a competent engineer have been engaged and the drawings and specifications prepared with accuracy and precision. Presumably such a man will be a member of the American Society of Heating and Ventilating Engineers. If not, he ought to be.

Value of High-Grade Membership for Reference Purposes.

In passing I wish to lay stress on this matter of membership, for it applies to your own association as well. All the good men in your calling should invariably be included in your membership. Only such should be properly qualified to enjoy the privileges of

your association. Then it will be pertinent on the part of architects and owners considering the awarding of a contract to inquire if the contractor about to be chosen is a member of the association, and if not, why not? Not being a member should be attributed either to a lack of eligibility or to a lack of sensitiveness to his responsibilities, for all good men should delight in assisting organizations of their fellow craftsmen, not for what good the association may do them, but for what good they may do the association.

Your association through its members and committees has already done much to simplify heating practice. This ought greatly to be appreciated by the trade in general, especially by the younger men, who have thus benefited by the results of your experience. You have in this way, also, rendered an assistance to architects and performed services to the owners and occupants of buildings perhaps unbeknown to them.

In addition to what you have done in perfecting certain practices in piping, and in standardizing flanges, couplings, and threads, etc., can you not further co-operate with the American Society of Heating and Ventilating Engineers and with the American Society of Mechanical Engineers and manufacturers of apparatus, in developing a standard or uniform basis of rating for boilers and domestic water heating apparatus, etc.? I know you have been working on this, or I have read of it in your 1914 proceedings, but can we not look for a definite pronouncement and the publishing of the results?

Uniform Radiation Formula Recommended.

Can you not in co-operation with the same society work on developing a basic formula or officially approving one of those in existence for computing the amount of radiation recommended in proportion to cubical contents, to outside wall area (for different kinds of wells) and different exposures, to window and door openings, etc., and make this available to all architects for instant reference?

Such a formula, if not actually used, as it should be, by those architects who do not employ an engineer for some of their everyday problems, could at least be referred to in their specifications. Then, instead of calling for the building to be heated according to the varying individual judgment of each contractor estimating, these architects could refer to such a formula, as providing the minimum installation allowed. This would undoubtedly be a great improvement over the indefinite methods now obtaining and would provide equable conditions of estimating so

(Continued on page 824.)

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Garage and Office, coal yard, Fourth and Allegheny avenue, Philadelphia. Architect, private plans. Owners, Philadelphia and Reading Railway Co., Reading Terminal, Philadelphia. Brick, land 2 stories, 20x43 feet, tin and slag roof, hot water heating, electric lighting, metal lath, pine and cement floors. Owners have received bids.

Residences (36) and Stores (4), Frankford and Erie avenue, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner's name withheld. Froelich Bros. Increased Their Business With the Autocar

Froelich Bros., Inc., Plumbers' Supplies, 142 N. 7th Street, Philadelphia, say: "We knew we were making a good investment in buying an Autocar, from the satisfaction it is giving so many other concerns—but the results have gone away beyond our expectations. We got the car last March and it hasn't lost a minute any working day since. Enlarged our territory far out into the suburbs, where we never delivered before with teams, and saves us money every day. When you consider it does the work of three double teams and you figure up the costs of those teams, drivers' wages, etc., you can see where the Autocar wins out as an all around delivery proposition."

Write for illustrated catalog and list of more than 4000 concerns using Autocars in every line of business.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

Meeting room, Twelfth and Latona streets, \$1,500. Jas. Impen (O and C), 1220 South Twelfth street. Brick, 1 story addition, 17x34 feet.

Dwelling, 2208 Rittenhouse street, \$375. J. B. Hopkins (O), on premises. Chas. Zetley (C), 340 South Quince street. Brick, 3 story addition, 12x12 feet.

(Continued from page 814.)

far as capacity of apparatus and amount of radiation is concerned. If any estimate received appeared either too low in cost or deficient in quantities, such a formula would afford any architect an opportunity to check up for comparison with other estimates.

Of course, preferably, it should be used as the basis of his own calculations to be definitely stated before estimates are asked, and, if so used, I cannot see how it would interfere with the occupation of heating engineers, which is one of the arguments that might be advanced against it. Presumably it would only be used by those architects who would not in any case have employed an engineer for that particular work.

This is a suggestion which I wish you seriously to consider, for I believe it would greatly facilitate common practice in steam fitting, just as the piping of buildings for gas will be facilitated by the basic piping schedule recently adopted by the National Commercial Gas Association.

Of course, this basic formula would not alone be sufficient to insure absolute equality of conditions in estimating. There are other matters to be considered, such as a general description or outline specifications or requirements for the ordinary run of work, which, it seems to me, could well be drawn up by your association. This would, of course, not apply to sizes of pipes, which in your case I appreciate are variable, but should

in the form of suggestions to architects as a basis for their specifications to provide truly competitive conditions of estimating, as to whether pipes are to be exposed or to be encased in walls or partitions, as to chasing and covering of same, as to valving and draining raisers in hot water installations, the height of radiators, whether under sills, or seats or not, and so forth, in simple work and on up into air lines, returns and other important principles in larger work.

And then there is the matter of sectional covering and banding on lateral runs, plastic covering on flanges, couplings and fittings, and on the heating apparatus itself,—surely some standards of practice could be developed which would greatly aid in establishing a uniform basis of estimating.

Use of Names and Brands in Specifications Favored.

While we are speaking on the subject of clarity, why not let us co-operate to get rid of words in specifications which say, but do not mean, "very best quality" and the "or equal," in favor of calling for the brands, thickness and weight of pipes and for the various other products by the several names which will be acceptable?

More and more frequently a distinction is being made as to quality in materials of building construction and stronger encouragement is being given to those producers who, in spite of rigid competition, adhere to their standards of manufacture and make names for themselves under established brands.

Advertise and the world buys of you;
Renig, and you need a loan.

If you never tell what you have to sell,
You'll have troubles all your own.

VOLUME XXXI
Number 51

PHILADELPHIA
December 20, 1916

As The Editor Sees It

THEODORE STARRETT discusses "Too many Middlemen" in the current number of *Architecture and Building*. When one stops and thinks of the vast number, whether in the cities or going to and fro between the cities and the places where things are actually produced," writes Mr. Starrett, "one may realize what a deal of money has to be added to the cost of the primary products to pay the living of all the middlemen who are engaged in handling them."

"It's a great game," comments Starrett, "this living off the other fellow. It's been going on since the time of Adam and will go on till the Resurrection Day, no doubt, but people have a way of refusing to give up—of refusing to be resigned to it just the same, and democracy has done, oh such a lot to distribute the load, as the engineers say. The game is going on now in one of its most interesting phases. They call it the elimination of the middleman. They should call it the reduction of the number of middlemen, and, taking a humane view of it, if it is not to be actual death or the poorhouse for the unneeded portion of the strugglers, there should be an accompanying movement to increase the number of producers. One of the things that makes life interesting nowadays is the union—men banded together to get a bigger share of the product of toil than their fellows who may not be banded together. You know that for every man that gets more there must be some one to get less, and the more the few get, the greater the number of those who must take less."

* * *

BUILDING," says Mr. Starrett, "has been unionized to an extraordinary extent and the share of the public's money that goes for that necessary element of our modern life has been disproportionate to the amount

left for other activities. It has caused two things,—one, excessive competition in that branch of industry, and, two, emulation on the part of all other branches of industry, which will lead to all being unionized or, at any rate, of all being raised. When everybody is raised we will be just the same as we were before, but our money will buy only a half or a third as much as it did 'before the war.' There are too many middlemen indeed, but not too many kinds.

"One might here venture to speak on that delicate subject, the relation of architects and master builders to society. It would be easier to say architects and builders, but I mean now the managing builders, men who supervise and direct the whole work, as distinguished from the 'subs' who do the different parts of building, each as a specialist.

"One of the interesting phases of this question was the appearance of 'construction companies,' as they were called, which were widely heralded by the old-style builders as institutions that were intended to eliminate the architect. It was really the old-style builders that the 'construction companies' threatened, and, with characteristic cunning,—if it could be called cunning,—those who were threatened managed to work up a great fear in the minds of architects.

"The fear was largely an imaginary one, conjured up as a rule in the brain of the narrow-minded architect whose conscience may have pricked him or, worse, may have been so burdened by the thoughts of pet 'subs' to whom he was under obligations that he imagined the devil himself would be better than a businesslike organization to manage things and keep the grafting down. Some folks that ought to know better have really thought that one or the other—that is, the architect or the builder—could or should be eliminated, and

I don't know any that have been so scared about it as one or two of the leading architects of a few years back right here in New York.

* * *

It is true that ordinary business shows a merging under one head of the two functions which are performed by the architect on the one hand and the builder on the other, but that is like speculative building where the goods are manufactured and then offered for sale, just as they are in the case of furniture or clothes or shoes or what not.

"Building, considered as the production for a third party, the owner, of an object that must be designed for that owner in advance of its making, is not within the confines of the merchant's or manufacturer's functions. That is a truth that should some day sink into the consciousness of some folks, and it will, too.

"It all grows out of the well-known human quality of hating to see anybody profit at your expense. It starts with the owner, or is played up to the owner to win his favor. The architect is entitled to a living. If he does his work properly he should have ten per cent. The builder is entitled to ten per cent. 'Whew!' says the owner, 'twenty per cent! I can't stand that.' And if he is a 'good business man'—what does he do? Well, if he is a real business man and uses judgment in the selection of his 'help' he does pay both architect and builder a good profit and gets his affairs carefully administered.

"But human nature and the presence of too many middlemen makes it hard for the money-maker to see go by an opportunity to take a pound or two of somebody's flesh. Here is a chance to make a killing, says the money-maker, and alas! it is too often true.

"One of the favorite games of this

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

**BLUE
PRINTS**

modern bloodless war is the setting of architects against builder and the attempt to make the architect perform both his own work and the work of the other without paying him for the other man's work.

"Some architects professedly eliminate the master builder, announce their performance of his work and charge accordingly."

* * *

OTHERS—architects, I mean—are driven by the pressure from the owner to attempt the two-man job at the one man's pay. The conscientious performance of this task is a heart-breaking and ruinous thing. It makes the architect work for practically nothing. If the architect is not wonderfully capable there is a danger of the thing resolving itself into a piece of business that is full of drummer's overcoats.

"You've heard that story, haven't you? Let me tell it my way. The drummer put into an expense account the cost of an overcoat, and the boss cut it out. Next time the expense account had no overcoat and the boss said, 'I see you didn't put in the overcoat this time.' The drummer replied, 'I didn't put it in, but it's there just the same.'"

"What an honest fellow the drummer was, by the way!

"The middlemen must go; that is, some of them must go, but the builder will stay and some day it is to be hoped he will get a square deal. And the architect—of course he must have a square deal, too."

* * *

AN interesting example of the value of terra cotta fireproofing of structural steel frame, when exposed to extraordinary conditions of heat, is furnished in an Augusta, Ga., fire which destroyed 682 buildings, devastated nearly thirty city blocks and entailed a property loss in excess of four millions of dollars, including some of the finest business property in Augusta.

In the midst of this fire area stood the sixteen-story Empire Life Building and the ten-story *Augusta Chronicle* Building. The Empire Life Building was in an unfinished condition. The exterior copper-covered kalamein sash and frames were in place throughout the first and second story and the ordinary wood frames and sash in place throughout the upper portion of the building. The wood sleepers were laid embedded in cinder concrete, but no finished floors were laid in any portion of the building. Terra cotta fireproofing had not been installed on the interior columns of the first story and at the rear portion there was a large quantity of floor sleepers piled against the Bethlehem steel col-

umns. The only damage to the upper portion of the Empire Building was the burning out of the window frames and sash and the destruction of floor sleepers and other inflammable material. An examination of the *Chronicle* Building, which was for hours completely enveloped in flames, shows that although there is not a particle of inflammable material or interior metal work, including cast iron elevator fronts, steel door jambs and bucks, etc., which was not partly or entirely destroyed, there was not a single instance of a broken floor arch or terra cotta fireproofing of steel frame in the building that was in the slightest degree affected. In other words, the entire interior terra cotta partitions, furrings and floor arches were intact even though every door and window frame, whether of wood, steel or cast iron, was consumed or otherwise badly damaged. This is considered a very remarkable showing in view of the

fact, as previously stated, that the entire building was flame-swept throughout its entire interior; even to the extent that the Underwriters' fireproof hollow metal frames and wire glass on the other side of the building, were entirely destroyed and the glass all melted out of the frames. This will give some idea of the terrific heat to which this building was exposed.

The exterior lower portion of the building, which was of limestone, was badly affected, but the terra cotta trimmings withstood the effects admirably. The report from which these excerpts are taken is by Mr. W. L. Stoddart.

* * *

BY the time this number of THE GUIDE reaches our subscribers we shall be on the eve of Christmas Day. Here's wishing a Merry Christmas to THE GUIDE's many friends and supporters and to each a bright and prosperous New Year.

EDITORIAL NOTES

Arnold W. Brunner, architect, has been selected a vice-president of the National Institute of Art and Letters.

* * *

The new Cunard Building at Liverpool is the latest architectural lion in the British Isles. It is built of Portland stone, and the largest blocks weigh 14 tons, to handle which special machinery and methods had to be improvised. In this country the handling of 14-ton blocks in building work is almost commonplace. According to *Stone*, the columns in the Tiffany building, New York, are twenty-eight feet eight inches by three feet six inches, and were cut from rough blocks weighing forty tons each. In the People's Trust Company building, Brooklyn, are four monolithic columns weighing about twenty-four tons each. The lower sections of the eight columns in the sanctuary of St. John the Divine in New York weigh approximately ninety tons each. The West Point battle monument is of polished granite and measures forty-one feet six inches by six feet.

* * *

The card schedule of prices for linseed oil touched one dollar a gallon for single barrels this week, and ninety-nine cents for five-barrel lots, under a fair inquiry and a short supply. The schedules issued by manufacturers of prepared paints also show advances. The main reason for the higher quotations is the cost of raw materials. The different lead pigments are higher than a

year ago, as are all oils that enter into the manufacture of paints.

* * *

Bids for highway work involving an expenditure of \$200,000 were opened by officials of the Philadelphia Department of Public Works. The operations include the grading of streets, the paving and repairing of asphalt paved streets and the dredging of a number of small creeks.

* * *

The lumber interests are scheduled to occupy a prominent position in the coming National Complete Building Exposition, which will be held in the Grand Central Palace, New York City, March 5 to 11, of next year. Leading firms in the lumber trade have already contracted for some of the most desirable exhibition space, and there is no doubt that the lumber division will become one of the most important features of the enterprise.

* * *

Augustus Thomas, the playwright, offers the most recent solution to traffic congestion in Manhattan, which has become a serious problem now confronting the city authorities. Mr. Thomas believes that bridges will bring about the desired relief, if they were properly constructed across Fifth avenue, in the streets between 34th and 59th streets. The erection of these structures would, in his opinion, make adequate provision for east and west traffic and would allow an uninterrupted flow of vehicular and

pedestrian traffic on Fifth avenue. Although it is doubtful whether the suggestion will receive serious consideration, on account of the insurmountable difficulties which will have to be overcome, the incident is a commentary upon the interest which New York City's citizens are taking in acute government problems.

* * *

Red lamps must be placed on building material which is left in the streets by building contractors or they will be arrested and fined, according to Chief of Police Gravenor, of Camden, N. J., who issued this statement recently. So many complaints have come from people who fell and injured themselves on streets where this material was placed that the police promise action.

* * *

Resolutions calling for a municipal stadium in the ravine at Thirty-third and Master streets, in Fairmount Park, Philadelphia, were passed by the Brew-

erytown Business Association, which met at Twenty-eighth street and Girard avenue.

* * *

The Hardwood Manufacturers' Association will hold its annual meeting at the Sinton Hotel, Cincinnati, Ohio, January 30-31, 1917.

* * *

H. Laussat Geyelin, president of the University of Pennsylvania Athletic Association, will announce the names of the five members of the stadium committee which he has been authorized to appoint to confer with Provost Smith and the trustees of the University regarding the plans for the 100,000 capacity athletic stadium proposed for a plot in Woodlands Cemetery.

* * *

The National Brick Makers' Association will hold its next convention at the Hotel McAlpin, Broadway and 34th street, New York City, from March 4-11, 1917.

EFFECT OF ZONING PLAN ON OTHER CITIES.

Statement by Thomas Adams, Town Planning Adviser, Commission of Conservation, Ottawa, Canada, on Zoning Resolution.

We feel to some extent that New York has been responsible owing to the example which it has set, for some of the high buildings in Canadian cities. We are looking to-day to your new tendency in the hope that our cities will follow your example of providing greater restrictions on height. We have not the excuse for high buildings that you have in New York.

Town planning in Great Britain and Canada is one of those questions that grows stronger in its appeal as it is taken up, and as research progresses, to the business man. Undoubtedly he starts out to study it with the assumption that it is purely an aesthetic function—the proposal to use the police power to restrict the rights of private property in the interests of the public. But it does not take him long to discover that both public and private interests are closely identified and that reasonable restriction of the use of property is in the interest of all parties.

Restricting Vacant Areas.

The whole question of controlling development in those parts of your city which are only partially developed has become one of importance and requires serious consideration. I do not know whether it would be possible for this work to be carried out over wider areas so as to include land which is not yet subdivided. So far as our town planning work in England and Canada is concerned we are trying to apply it in areas that are still undeveloped, as well as to those that are in course

of development. We proceed on the principle of the Jesuit, who in his wisdom said, "If you give me a child until he is eight years old you can have him for the rest of his life."

We feel that the really important thing is to get hold of the suburb before it is developed. Much of the older portion of the city can look out for itself. I think your work should be extended to a wide area in order to get your restrictions applied before building is begun. In getting hold of the suburbs that are starting to develop and applying the same principles to the open land that you apply to the built-on land in the city, the result will be that you will be able to apply restrictions which will accomplish something nearer to your ideals. You will not be required to compromise with existing vested interests. Owners of real estate themselves will not only be anxious to agree to something that gives safety and health, but even to what we, in England, call "amenity" in plan and surroundings.

Town Planning Law in Canada.

When our Parliament passes a law it does so with recognition of the English Bill of Rights. The whole constitution of Canada is framed on what you perhaps would call the unconstitutional constitution of Great Britain. It is not a fixed constitution, but a constitution capable of readjustment and alteration by Parliament itself, subject of course, to the principles of the Bill of Rights, and the whole question of the recognition of

the rights of the individuals to do what is reasonable with their property.

In laying out streets the Parliament in Canada recognizes the principle that private property shall not be taken for public use except with just compensation. But it does not assume that you may use private property to the injury of the public use, nor does it necessarily allow an abuse of private property and then a claim for compensation because you are prevented from getting the advantage of that abuse. That is the point when land may be used for building development to such an extent that it becomes not use of land, but abuse of land—abuse of the right to use land.

I think those who advocate the single tax say there are two uses of land, one is "non use" and the other is "use." I think we have three, one is use, the other is non-use and third is abuse. The point is really where the method of developing land actually becomes an injury to the public. You have to recognize the rights of the man who claims compensation for restrictions on his use of property; but he should not, for instance, be permitted to demand air space from property abutting on their own as a right. He ought not to be allowed to claim compensation on the ground that he is prevented from using the space on the street or on an adjoining site to provide him with light. He may properly be required to use his own property in order to provide his own air space and light. I speak of what appears to me to be equitable although it may be without regard to what is legal. Our Parliament recognizes constitutional clauses of equal protection of the laws.

I don't think there is much distinction between your treatment of private interests in property and our own, except that probably

we are able to obtain by general law what you have to secure by police power and you have probably to educate your courts with regard to the interpretation of the matters that come within the scope of the police power. You do not appear to have the same power to revise and remodel your law to suit changing conditions.

Of course, the courts have comparatively little jurisdiction in regard to the restrictions that are essential to secure proper sanitation and "amenity." A person cannot obtain compensation by reason of doing anything to contravene the scheme after a given date. There is no appeal in that matter above the Department of the Government. The following subsection which appears in all town planning acts shows how much jurisdiction is vested in the department, and therefore the reason why the matter has not come before the courts:

Property shall not be deemed to be injuriously affected by reason of the making of any provisions inserted in by-laws or a scheme, which, with a view to securing the amenity of the area affected by the by-laws or the scheme, or any part thereof, or proper hygienic conditions in connection with the buildings to be erected thereon, prescribe the space about buildings, or the percentage of any lot which may be covered with buildings, or limit the number of buildings to be erected, or prescribe the height, character, or use of buildings, and which the department, having regard to the nature and situation of the land affected by the by-laws or provisions, consider reasonable for the purpose of amenity and proper hygienic conditions.

The right of our Town Planning Commission to name restrictions has never been contested in the courts. Where I think we seem to have an advantage in our Town Planning Acts is that the provinces have full power to deal with questions affecting land and municipal questions. They pass an act and there is no appeal from that act to any federal court. There is, however, an appeal to the provincial Parliament as between the municipality and the owner.

For instance, in a Town Planning Act a ministerial department of the province, say, the Department of Municipal Affairs, becomes the controlling authority in regard to planning in that province. Once a town planning scheme is prepared by the municipality they have to apply to that department for the right to prepare the scheme and for approval of the scheme. Compensation cannot be claimed and there can be no appeal on the question of restricting the number of buildings to an acre, or in fixing the character or height of buildings if the provincial department is satisfied that the restriction is reasonable.

There are districting regulations in one or two cities like Toronto and Hamilton. That is a matter that is subject to the owners presenting a petition and the majority being in favor of that plan. It is done on the initiative of the owners who may apply to have restrictions placed on property.

You have a number of inhabitants in a street who desire to have that restriction placed upon it. They make an application and the Council has the power to apply that and it becomes law when they have done so.

Both in England and in Canada the town planning idea and the whole scheme of districting is based upon motives of health, safety from fire, convenience, comfort and general welfare. Safety from fire is particularly important in Canada. We pay, I think, six or seven times as much for fire prevention and insurance in Canada as in England. The cost of maintaining fire appliances and the cost of fire insurance, I think, is two dollars per capita more than in England.

Absence of Control.

This is largely due to the absence of the control of the character of buildings and the regulation of space surrounding buildings. For instance, in an English city you must put a certain amount of space around your building and that must be paved or graded with some incombustible fireproof material. There are more restrictions there than there are in Canada. The whole thing grew out of necessity, or what became a necessity in order to protect the health of the people living in the cities.

Town planning is being generally adopted throughout Canada in order to promote health, safety from fire, etc.

Four out of nine provinces have Town Planning Acts. One of these has a compulsory act for the whole province, and no future development can take place there unless it is part of the scheme. In Manitoba they have just passed such an act. In Saskatchewan the act has passed its first reading. I expect that by this time next year the whole of Canada will have town planning acts. These acts will enable the number of houses to be limited to an acre, the districting of different kinds of business, the height of buildings to be regulated, and the space around buildings to be secured on a reasonable basis without compensation having to be paid for restrictions.

It does not apply to land already built upon unless compensation is paid. If you ask a man to pull down a building, or if you require the ground in front of an existing building which is essentially part of that building, compensation has, of course, to be given. So long as you do not interfere with an existing building or take away land now owned, you could apply the same regulation in a territory in which there were buildings as in territory in which there were none.

Application of Restrictions.

We use the words "land in course of development or partially occupied by buildings" to distinguish it from vacant land on the one hand or fully built upon land on the other. The restriction may apply to all cases, but in different form to each. You could apply a restriction on the height of buildings in the heart of Toronto if you see fit, provided you do not require some buildings that ex-

ceeded your restrictions to be cut off. But that does not come within the town planning acts—it is dealt with by city by-law.

The same remedy would be invoked against a man who proceeded to build contrary to a plan which had been adopted in Canada, as in England. There is a scheme being prepared for St. Johns, New Brunswick, covering twenty thousand acres, which includes ten thousand acres inside the city and ten thousand outside the city, but the city of St. Johns has prepared the whole scheme and it is going outside its own territory.

If you restrict a city here such as New York and you prevent bad development in that area, you only succeed in preventing bad development just over the boundary, unless you also restrict that area outside of the city. If in St. Johns, after a certain date, a few months' notice being given, any owner builds a house which contravenes the proposed scheme he has no claim for compensation if the authorities require him to pull down the building or alter it.

In England a man erected four shops under a scheme which I approved. It was stated he should put his shops seven feet from the edge of the street, instead of which he put them only three feet from the edge. He had a comparatively shallow lot. The shops projected four feet in front of the building line. I reported that he should pull them down to the extent of four feet. He appealed first to the Local Government Board, then to Parliament, and it was finally settled that he had to pull down to the four feet, but they gave him twelve years to do so, so that he could draw the rental for that period to compensate him for his loss. There is no intention to allow any owner to defeat the principles of these acts.

I would like to see more done to improve both cities of Niagara Falls. In the matter of Victoria Park, we have done a great deal, but I would like to see more effort made on both sides of the river to improve and beautify the surroundings. It requires co-operation.

The acts have not been long enough in operation to allow a scientific study of the effect of town planning on health. But in Bornville, Letchworth and elsewhere it has been shown that the death rate need not be higher than nine a thousand. The children, as compared on the average with those of the same age in the slums, are proved to be heavier and of greater height.

I think there are several cases in which it has been shown that the proportion of eligible men fit for military service is greater in the healthy districts than in the unhealthy areas. There is a well-known case, which you will probably remember, in which 8,000 out of 11,000 were rejected in one instance for the army on account of physical defects due very largely to the social conditions under which they lived. This happened in Manchester. I think there are a great many other cases which prove the deteriorating influence of the slums.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

MARYLAND

Contracts Awarded

There's beauty and durability and satisfaction for Contractor, Architect and Owner in every brush full. Prices, samples and literature on request.

EUGENE E. NICE, Manufacturer, PHILADELPHIA, PA. and CAMDEN, N. J.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

"Do what you are paid to do—and then some—it's the then-some that gets your salary raised."—James B. Miller.

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers 'stick' year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big

man becomes big by growth. And growth starts with the seed.

Do you get "The Guide" regularly? You should. Better subscribe now, while you think of it, and keep in touch. The man who fails to get and to read carefully the trade paper of his chosen line, is missing a while lot of valuable data that should be at his command.

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Decem-ber 15, 1916.—Sealed proposals will be opened in this office at 3 P. M., January 26, 1917, for the construction, complete, of the United States post office at Waterloo, N. Y. Draw-ings and specifications may be obtained from the custodian of site at Waterloo, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

EVANS "ALMETL" FIRE DOORS

Pat. Pending

Of rigid all-steel and asbestos construction, they offer maximum protection to exposed openings.

Light, strong, durable and attractive.

NO TIN TO RUST

This feature makes the Evans "Almetl" Fire Door very desirable as a protection to exposed openings as shown in cut.

Fire Retarding "Star" Ventilators

PAT. GRAVITY DAMPER

Provide good ventilation, ample light and prevent the spread of flames upward through the roof. Acknowledged superior to all others in design. Made in galvanized steel, galvanized iron or sheet copper.

LUMBER YARDS

Third and Girard Avenue, Philadelphia

An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.
Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 52

PHILADELPHIA
December 27, 1916

As The Editor Sees It

A FEATURE of the October number of *The Architectural Record* was a review, by Donn Barber, of "The Works of McKim, Mead and White." A "Monograph of the Works of McKim, Mead and White, published by the Architectural Book Publishing Company, of New York, furnished the inspiration for Mr. Barber's scholarly and informative article.

"After an extraordinarily active practice, covering a period of something over forty years," writes Mr. Barber, "the work of the firm of McKim, Mead and White is distinguished among all American architectural firms, at once for its variety, its quality and for its very certain distinctive character. * * * Their work has always excited particular interest among an unusually large number of people. It has had the friendly admiration and approval of architects quite as much as, if not more than, of the laity, and this homage has invariably been accorded singularly free from qualification and envy of any kind. Their work has, moreover, been valued quite as much by architects whose own tendencies of design have been dissimilar to theirs, as by artists generally throughout the world who have happened to accept the same traditions and to have believed in the same ideals.

"Messrs. McKim, Mead and White have stood pre-eminently and consistently for the use of certain architectural and for a certain specific intellectual attitude toward the fundamental problems of American architecture. They have helped signally to establish and to popularize this group of architectural forms. Objection has at times been taken because, in the designing of their buildings, they have appeared to attach more importance to an assimilated use of certain historical architectural forms than they have to a design frankly dictated by the special conditions that it

would seem the particular building should satisfy. Many of their designs are frankly and purposely derived from well known French or Italian structures; but in re-arranging and adapting these models to American uses, they have never sought to obscure or deny their origin. What is needed first of all in America is a condition of better and more convincing and commensurate architecture; and it must be conceded that the individual members of this firm, not only in the work under their charge, but in their helpful influence on the work of others, have done perhaps more to help and benefit American architectural than almost any other firm of this generation."

* * *

THE buildings of McKim, Mead and White have been criticised, of course, in certain of their details. What buildings haven't? It must be admitted, however, that the influence of their work has invariably produced a powerful and highly beneficial effect. American architectural history will prove more and more that they have been right and convincing in most of their arguments. If, for their inspiration, they have sought among the classics of Europe, for their models, it cannot be said that their range of selection has been in any sense narrow, or confined to any particular country. They have chosen broadly from Italy, from France, and from Spain, and even from England. They have been borrowers and adapters, not so much of certain architectural forms as of certain architectural effects. Their appropriation of type has never been illogical, stupid, meaningless, or lifeless. They have shown themselves, taking their work as a whole, to be very generally in sympathy with the wonderful spirit of the Italian Renaissance. Whatever may have been their starting point in scheme,

they seem to have sought persistently, intelligently and skilfully, in designing their buildings, to make them first of all beautiful, then dignified, wholly worthy of their use, a real ornament to their setting and estimable in their expression. The work of McKim, Mead and White has made simple beauty, in matters architectural, more and more familiar to the American public. Whatever else, through their long and interesting practice, they may have failed to be, they have nevertheless always been true and sympathetic artists."

* * *

THE merited success of McKim, Mead and White has been uniformly obtained by means of the invariable and intrinsic quality possessed by their work. They have from the start of their career been inspiring leaders in the contemporary architectural development of our country; primarily because in their point of view they have been sagacious, persuasively intelligent, always appealing in argument and wholly representative.

"Their knowledge of the use and combination of materials, of color and texture, the possibility and perfection of craftsmanship, and the appropriateness in use, of all these things, has stamped their work with an indelible quality of refinement that has been far-reaching in its effect, inspiring in its influence and an education to those who have studied them."

* * *

IT is impossible to properly and adequately estimate the corrective and helpful influence that the work of McKim, Mead and White has been having, and will continue to have, on the American architecture as a whole, without studying at least some of the more general conditions which have prevailed, and are prevailing, and which have seemed to have a direct bearing on what

**BLUE
PRINTS**

it has been possible to accomplish, architecturally speaking, thus far in this country. That our modern civilizations are fast losing what might be termed their artistic individuality must be perfectly apparent to any observer. Ease, rapidity and facility of communication and transportation have been gradually bringing what used to be distant nations of the earth very much closer together in every way; and what has seemed best, or been proven so, in art, as in fact in almost everything, has been universally accepted and extended to such a marked degree and extent that the standards and conventions of presentday life are pretty much the same the world over.

"We find few, if any, real or important differences existing to-day between life and conditions in countries even far remote from each other—the strong and sure tendency is toward complete standardization. Convention of society, customs and tastes everywhere are rapidly becoming much the same, barring, of course, natural physical and climatic conditions, though even these influences seem to count for less and less. This leavening condition seems bound to go on and increase; and it is probable that within the next century much of what has hitherto been considered the individuality of the various nations and their people will have practically, if not entirely disappeared."

* * *

IT would seem, therefore, that one of the most important things for us to be considering, architecturally, is what might be called the intellectual attitude which the American architect is assuming toward his work. His mental attitudes and resulting vision, must necessarily influence, if not wholly determine, the character and value of what he practices. Just how big and broad and worthy a point of view will come, as a consequence of this intellectual attitude must, of course, vary according to the environment, educational advantages, training and travel experience of the individual. When it comes to the application of mental conviction to the requirements of practice, it would seem, broadly speaking, that the modern architect has too extreme choices of procedure open to him: he may produce buildings that are an adaptation to modern conditions of traditional European types of architectural forms; or, completely ignoring traditional forms, he may choose to design buildings which represent a free solution of the present day social and economic standards based on modern physical needs. The artist who begins by accepting traditions almost invariably becomes a slave to tradition; whereas he who ingeniously rejects tradition usually becomes the victim of his

spirit of revolt. A wise and safe course to follow must surely be somewhere between the two extremes. It cannot be deemed illogical to hold to traditional forms and methods of design, if in their adaptation they can be made to genuinely express a modern need. It becomes a practical impossibility, in practice, to draw too sharp a contrast between the past and present in architecture, for architecture taken as a whole, is the result of a gradual process of development which has grown along steadily with the progress of civilization. Intellectually and socially, America has never become quite independent either of Europe or of the past. The fact that we happen to occupy a separate continent, with certain physical characteristics of its own, might lead us to assume that we occupy an unusual, if not unique, position in the world. But mere physical separation is in reality unimportant as long as we have failed completely to gain our intellectual independence. Our development, after all, has merely been an echo, as it were, of European intellectual and social habits. We have been in the habit of acquiring from abroad everything of value that we have wanted and been able to understand and appreciate, as desirable in architecture, painting and sculpture, just as in literature and the drama."

* * *

WE should remember that our present American social and domestic life is in no sense revolutionary, even if our American business methods and industrial organizations seem to be. It merely happens to be the modified and assimilated reflection through American conditions of European social and domestic life. Why then should we not house ourselves pretty much as Europe houses itself? Our unprecedented achievements in trade and industry have their possible appropriate architectural expression and unusual possibility of conception in the design of huge warehouses, terminals, factories, and, of course, primarily, in the skyscraper. The structure of such practical buildings can properly demand, to-day, a wholly original treatment. Classic precedents would seem to hinder, rather than aid, the architect in such work. In the solution of like problems, it might be considered, perhaps, as well to dispense entirely with the usual architectural stock in trade, if any such abstractions were intellectually possible. What the design of our American buildings need is not individuality, temperament, originality or freedom of expression, but a style that appeals to the aesthetic commonsense of men. Style means a complete and satisfying union,

by some process, of beauty and propriety."

* * *

AN owner would seem to have every right to stamp upon the building that he is paying for the characteristics of his personal life and taste, if the building were to last for his life time and pass on with him. The architect who builds seriously, however, can merely recognize that the taste and inclination of the owner may either confirm or impair the value of his work, and build accordingly.

"The architect to be able to use his professional authority to the best advantage, besides being thoroughly skilled in the technique of his art, must have mastered completely the historical styles, and he must know their every meaning, if he honestly desires to give them a new and logical expression. He will then be able to familiarize the more intelligent American public with architectural forms different, perhaps, in some respects from those of Europe, and to help materially in the forming of an American architectural tradition, which will be sound and at the same time flexible enough to assimilate every improvement that appears in aesthetic and economic standards."

* * *

PERHAPS the most important element to be considered in modern architectural composition, at present, is the question of scale. The wide divergence of opinion and practice on this subject is almost entirely responsible for the restlessness in appearance of our modern art. Some architects, leaning toward French traditions, follow their diminutive dimensions too closely; while others preferring to take their inspiration from the larger scale of Italy, often swing too far the other way. The determination of scale, as applied to modern architecture, is really one of the most difficult problems we have to solve.

"McKim, Mead and White, very early in their professional career, seem to have hit upon, or discovered, a general scale in the building that, as time goes on, is proving more and more to be an answer to this most difficult element of composition. Examination and study of their work show that they have been thoroughly consistent in this matter, and that they have modified very little, in the forty years of their practice, their early convictions on this important subject. Their influence in this one thing, if no other, will give them a place in history that anyone might justly be proud of.

"It is impossible to enumerate, even without discussion, the many definite tendencies and principles that have be-

come common practice and that have unconsciously been woven into American architecture by the examples and proven success of this great firm."

* * *

MCKIM, MEAD AND WHITE, it should be noted, are entitled to the credit of having established a tradition that is representative and formative. They have convinced, and count among their disciples, a large following among architects throughout the country; many now practicing under their own names, who have come under the influence of their work as younger men in the office, are to-day following in their footsteps, doing work of compelling example. To all of these," concludes Mr. Barber, "as well as to the profession at large, the *Monograph of the Works of McKim, Mead and White* should prove a welcome compilation of a valuable work of reference, a volume

the constant study of which will repay, refresh and inspire the student and spur him on to better thoughts and efforts."

* * *

WE have quoted at unusual length from Mr. Barber's article because of the importance of the message his views carry to the young practitioner whose style is as yet unformed and whose tendencies are still, so to speak, in process of incubation. Mr. Barber is, himself, an architect of the finest achievement. His views are, in the circumstances, those of one who speaks, to some extent, ex cathedra on the subject of which he writes. We regard this review of Mr. Barber's as a deliverance of more than passing interest. The McKim, Mead and White Monograph should, we imagine, be of immense and lasting advantage to the man whose aspirations lean to the higher ideals of his craft.

EDITORIAL NOTES

Lloyd W. Young, for several years advertising manager for the Bishop-Babcock-Becker Co., Cleveland, O., has resigned to engage in the advertising business under his own name, as an "advertising counselor." Mr. Young has taken offices in the 1900 Euclid Building, Cleveland.

* * *

Tracing cloth is affected by the amount of moisture in the air, and for that reason it is occasionally desirable to transfer a drawing to ordinary paper. This may be accomplished by the use of a glass top table beneath which are suspended several strong (60 to 100-watt) incandescent electric lamps. The strong light passes through the drawing and the superimposed paper on which the tracing is to be made. Where blue-prints are desired a thin white paper can thus be used instead of tracing cloth and at less expense.

H. B. Smith Co., Westfield, Mass., announces the removal of its New York office to 10 East 39th street, and the Philadelphia offices to 7th and Arch sts, where attractive showrooms are provided for the display of the company's line of Mercer and Mills boilers and Princess radiators. J. C. Faulkner is the company's New York manager. H. B. Kellogg is the Philadelphia manager.

* * *

The members of the local Sheet Metal Contractors' Association of Cleveland, Ohio, have already started prepa-

ration for the annual convention of the National Association in that city next June.

The several committees which have been appointed are holding weekly meetings, and nothing is being left undone which will contribute to the success of the meeting.

The committee on arrangements is headed by H. H. Lind, a national vice-president, and A. W. Howe, of the J. M. & L. A. Osborn Co., is secretary. The entertainment committee is chairmanned by George Stran, while the finance committee is headed by George F. Thesmacher.

June 12 has been fixed upon as the provisionary date for the opening session.

* * *

L. O. Koven, of L. O. Koven & Bro., New York, who recently retired from the presidency of the Eastern Supply Association, was presented with a loving cup by friends in that association, the donors including F. S. Hanley, F. B. Maerke, A. S. Mitchell, R. H. Noble, H. H. Sommer and Mr. Allart. The presentation was made by Mr. Maerke at the Machinery Club, New York, November 10.

* * *

As the year draws to a close the business man naturally turns his attention to his progress for the year. The man who has the better book-keeping system knows from month to month approximately what progress he is making

while others await the close of the year, with its stock-taking period. Still there are others who do not even take stock. These are the men who, as a rule, have no cost accounting or other office system, but simply go on from month to month in a haphazard way. Few, if any, of this class, ever progress very far on the road to wealth. A living, and a bare one at that, is usually their portion—one degree removed from absolute failure. But why will such men go on in the same way year in and year out? If they want proof that their way is wrong they will only have to look to the methods used by the successful men in their vicinity. These men, they will find, do business on a business basis. They know what it costs them to do business and they add whatever that percentage may be into every estimate. They figure a profit for themselves on every job. They keep thoroughly posted on all progress in their trade and are quick to adopt new methods once their worth is proven. The best preparation, therefore, any merchant mechanic can make for the new year is to follow the examples set by such successful men in his locality—to do business on a business basis, and with a fair profit on every piece of work undertaken.—*Sheet Metal*.

sylvania. This is but a supplement to the many other institutions which have approved the "Almetl" door, among which are the Underwriters' Laboratories of Chicago, the Factory Mutual Laboratories of Boston and many National, State and Municipal authorities.

In addition to its standard line of fire doors and shutters and the "Almetl" line, the company is prepared to supply many unusual requirements, such as furnishing these doors and shutters made of American Ingot Iron, or painting the inside of the panels with a special paint. It is also prepared to furnish sliding or swinging doors, with well designed frame set into and securely bolted to the door, to hold wire glass, as well as doors with offsets to protect openings that have a mono-rail track running through at the top.

The company has over 160 contracting and erecting licenses established throughout the country for the promotion of this work, as well as its branch offices in many of the larger cities, any one of which will gladly give complete information on any fire door problems any reader may encounter.

* * *

The D. B. Martin Company has taken title from Edward L. Scholl to the five-story hotel at the northwest corner of Thirtieth and Ludlow streets, adjoining their present plant, subject to a mortgage of \$8,000. The plot is 55x23 feet and the assessed value \$11,000. The property will be the site for an addition to the abattoir of the purchasers.

* * *

Twenty railroads report gross earnings for the first week of December, of \$8,739,052, an increase of about \$1,300,000, or more than 17 per cent., compared with the same week last year.

* * *

Rumors that State Senator James P. McNichol might move to the suburbs when the city takes his present residence, 222-24 W. Logan Square, for the extension of the Parkway, were set at rest by the Senator's announcement that he has purchased a site for a new home on Race street, west of 19th, adjoining the Academy of Natural Sciences. The house he intends to build there will overlook the enlarged Logan Square and the Parkway.

The Race street plot is 40 by 129 feet, not quite as large as Senator McNichol's present residence property, which is 45 feet by 150 feet. He purchased the new site, which ground has been idle for the past seventy years, from George H. McLaughlin and J. Nelson Dick. They acquired the tract several years ago from the Ninth Presbyterian

Church, which had removed from there to 16th and Sansom streets, about 1840.

* * *

The average price now for eight chief iron and steel products is \$72.12 per ton, higher than ever before, and comparing with \$39.68 a year ago.

* * *

Four of Violet Oakley's five mural decorations for the Senate Chamber of the State Capitol have been shipped to Harrisburg from the artist's home, Cogslea, Allen's lane. Miss Oakley will go to Harrisburg this week and again for a few days next week to put the finishing touches to her works after they have been placed on the walls.

The pictures which went to Harrisburg consist of two arched panels for the right and left of the president's seat in the Senate Chamber, and two semi-

lunettes depicting "The Armies of the Earth" and "The Slaves of the Earth." The great central panel, which is to span the arches of the rostrum wall, and which is still at Cogslea, symbolizes the supreme manifestation of enlightenment in international unity—the recognition of the unity of the kingdom of God and the moral and material world through international peace.

* * *

The ninth annual banquet of the Philadelphia Real Estate Board will be held in the ballroom of the Bellevue-Stratford on Saturday evening, January 27. The reception to the members and guests will commence at 6.30 o'clock, and from preliminary plans already made by the committee, the affair promises to be one of the most successful in the history of this organization.

EXPOSURE FIRES IN MERCANTILE PREMISES

By W. T. Colyer, National Fire Protection Association.

No Business Man Whose Premises Are Suitably Constructed for Such a District Can Think Without Concern of Antiquated and Dangerous Types of Building in Close Proximity to His Own.

It is sufficiently painful for the business man to suffer loss by reason of his own failure to take adequate precautions, but it is usually much more galling to him to have to pay for the carelessness of other people. When a loss by fire is caused by his own neglect, he may often derive a poor satisfaction from the thought that he is only the loser in a sort of gambling transaction. It was a question for him whether he would incur a comparatively small immediate charge for fire protective equipment, or whether he would save his money and take the chance of a possible future loss from a fire which the better equipment would have prevented or held in check. He took his chance—and he lost. Moreover, he will be apt to remind himself of any cases he may have heard of, in which protective appliances failed to do all that was expected of them, and he may try to think that his premises would have burned anyway.

While we are all naturally disposed to think of our own affairs in this way, most of us see the weakness of the argument when the other fellow uses it. We find it easier to define his duty than our own, particularly when we are likely to be involved in the results of his neglect.

For this reason, as well as others, the "exposure" hazard, that is, the hazard of fire communicated from a burning building to its neighbors, is a good one with which to start a series of talks to business men on mercantile fire hazards. The exposure risk is a very real

one, serious fires due to this cause being constantly reported to the National Fire Protection Association; and it is particularly important in congested districts where mercantile establishments are frequently crowded together. The shingle roof and the frame building, if allowed in such districts, are of course a constant menace to their neighbors. No business man whose premises are suitably constructed for such a district can think without concern of antiquated and dangerous types of building in close proximity to his own. Their hazards will be reflected in the fire insurance charges of all the surrounding properties, and in return for the additional fixed charge the proprietors of properly built premises obtain the knowledge that they are constantly menaced with all the dislocation of business that follows a serious fire. Owners and tenants of mercantile premises have an interest in securing the passage of building laws and ordinances which will prohibit owners of dangerous property from thus causing unnecessary expenditure and annoyance to their fellow citizens.

It would, however, be unfair to leave the impression that bad construction is the sole cause of exposure fires. Fires are liable to occur even in buildings of fire resistive construction if the contents be combustible; and here the window openings of such buildings have not been protected by wired glass and metal frames, there have been numerous instances of the flames obtaining ingress or egress through such openings, and easily consuming the contents while the buildings remained standing. Exterior wall openings which would be subject to exposure in the event of a fire in adjoining properties should

(Continued on page 853.)

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Stable (alt. and add.), Eighth and Mifflin streets, Philadelphia. Owners, U. G. I. Co., Broad and Arch streets, Philadelphia. Architect, private plans. EXPOSURE FIRES IN MERCANTILE PREMISES.

(Continued from page 846.)

be protected, according to circumstances, by fire doors, shutters or indows of approved construction. To pass from the purely selfish to the community point of view, it may be pointed out such devices resist not only the entry but also the exit of fire and thus relieve a public-spirited proprietor from the fear of himself being an unnecessary danger to others, should a fire break out on his own premises.

The water curtain provided by outside sprinklers is an effective safeguard against all but the hottest exposure fires, and while the inside automatic sprinkler was not designed primarily for that purpose, it has again and again proved itself equal to the task of preventing an outside fire from gaining any hold in a sprinklered building. Under conflagration conditions, indeed, in the face of which the effectiveness of no apparatus can be absolutely guaranteed, a group of well sprinklered buildings with adequate water supply form a enffective fire stop, even though one or two of the most severely exposed of them may be consumed. The absorption of heat secured as a result of forcing the fire to burn through what Mr. Albert Blauvelt has called "cages of spray" tremendously facilitates the work of the fire fighters, and gives the surrounding buildings a chance.

Even in isolation, well protected buildings occasionally pass practically unscathed through the test of a city conflagration and remain after the fire, solitary witnesses, amid the general ruin, to the unheeded possibilities of intelligent fire protection. On the other hand, there are instances of large mercantile premises, not well protected, being destroyed by exposure to comparatively insignificant fires. It may be urged that such occurrences are exceptional. Of course they are; all fires are exceptional. The question for the proprietor of the mercantile establishment is how much thought and money it is worth his while to expend on the protection of his busi-

DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

Alterations and Additions

Boiler, Fifty-first and Gray's avenue, \$700. Tioga Steel and Iron Co. (O), Fifty-second and Gray's avenue. Walter Kidde (C), 140 Cedar street, New York. One boiler, 242 horse power.

Dwelling, Cherakee avenue, north of Willow avenue, \$16,000. Samuel Houston (O), St. Martins, Pa. J. P. Thompson (C), Real Estate Trust Building. One-story addition, stone, 25x14 feet, slag roof; one-story conservatory, stone, 17x32 feet, glass roof.

Store, 923 Market street, \$2,000. S. W. Hirsh (O), on premises. B. Bornstein (C), 1510 North Franklin street. Repairs.

Offices, Tenth and Chestnut streets, \$500,000. Philadelphia Electric Co. (O), Tenth and Chestnut streets. John R. Wiggins (C), 1215 Filbert street. Side addition, 9 stories, brick, 72x46 feet.

Dwelling, 1407 North Twenty-fifth street, \$600. I. Kornstein (O), 948 North Second street. B. Israel (C), 863 North Fourth st. Flush bulks.

Store, 2836 Germantown avenue, \$350. Ideal Piano and Talking Machine Co. (O), 2835 Germantown avenue. Century Manufacturing Co. (C), Elizabethtown, N. J. Sign.

Storage, 606-08 North American street, \$2,000. Pottash Bros. (O), 504 North American street. Joseph Farbstein (C), 908 Walnut street. Alterations.

Store and dwelling, 716 North Broad street, \$7,500. Wm. Stellmag (O), 706 North Broad street. Ira K. Davis (C), 2400 West Oakdale street. Side addition, 1 story, brick, 6x36 feet, slag roof; rear addition, 1 story, brick, 20x24 feet, slag roof.

Store and dwelling, 633 Porter street, \$825. Mr. Freidman (O), on premises. M. Lesse (C), 816 Winton street. Repairs to bulk windows, repairs fire damages.

Dwelling, 1023 South Nineteenth street, \$300. Ellen Taylor (O), on premises. Robert Baile & Co. (C), 813 South Nineteenth street. Steam heating system.

Saloon, 4829 Paschall avenue, \$700. Mrs. P. Conley (O), 4827 Paschall avenue. George C. Lyons (C), 631 South Forty-second street. Alterations.

Store, 7 Arch street, \$800. Harry Lamb (O), 102 North Delaware avenue. Lam Building Co. (C), 1001 Wood street. Flush bulks.

Garage, south side of Gates street, east of Ridge avenue, \$400. William R. Haggart (O), on premises. Henry C. Mays (C), 6820 Ridge avenue. Alterations.

Dwelling, 410 Durfor street, \$600. Max Shusterman (O and C), 410 Durfor street. Rear addition, 2 stories, brick, 12x10 feet, slag roof.

Store and dwelling, 35 South Fifty-second street, \$300. B. D. Beewald (O), 641 Preston

street. James M. Holm (C), 5556 Arch street. Repairs.

Store and dwelling, 4667 Frankford avenue, \$350. L. Talesnech (O), on premises. I. Winoker (C), 1004 Montgomery avenue. Repairs, flush bulks.

Store and dwelling, 4669 Frankford avenue, \$400. L. Talesnech (O), on premises. I. Winoker (C), 1004 Montgomery avenue. Flush bulks, alteration.

Tank supports, Eleventh and Cambria sts., \$380. The Penn Rivet Co. (O), Eleventh and Columbia avenue. Stewart Bros. (C), 2528 North Orkney street.

Manufacturing plant, Swanson and Jackson streets, \$500. Haishaw, Fuller, Gordon Co. (O), on premises. A. R. Raff Const. Co. (C), 1635 Thompson street. Reinforced concrete boiler foundation.

Storage warehouse, Swanson and Beck streets, \$4,000. J. Millan Hagy Waste Works (O), 836 South Swanson street. Barclay, White Co. (C), 1713 Sansom street. Frame addition, 1 story, 70x15 feet, slag roof.

Dwelling, 248 South Eighth street, \$1,680. Merchant Union Trust Co. (O), 715 Chestnut street. Wm. Ferguson & Son (C), 405 South Twenty-first street. Alterations.

Dwelling, 1122 South Broad street, \$1,825. Mary Wilson (O), on premises. Sutton & Stephenson (C), 1317 Washington avenue. Interior alterations.

Restaurant, 1535 Filbert street, \$5,000. Pennsylvania Railroad Co. (O), Broad Street Station. Smith-Hardican Co. (C), 1606 Cherry street. Rear addition, 1 story, 16x92 feet, flush bulks.

Electric sign, Twenty-third and Market streets, \$350. Vim Auto Co. (O), on premises. Thos. Cusack Co. (C), 814 Walnut st.

Business, 1711 Sansom street, \$400. Mellon Estate (O), Bryn Mawr, Pa. Geo. C. Dougherty (C), 1725 Ludlow street. Brick addition, 1 story, 10x16 feet, slag roof.

Store, 1605 Columbia avenue, \$380. W. R. Dunn (O), Easton, Pa. John J. Niehenke (C), 1639 North Eighteenth street. Rear shed, 16x10 feet, brick.

Stores and offices, Sixteenth and Walnut streets, \$10,500. Maxwell & Berlet (O), on premises. A. H. Williams Sons (C), 419 Locust street. Brick addition, 1 story, 30x15 feet, flush bulks, fire tower, elevator shaft.

Bank, 431 Chestnut street, \$650. Tradesman's National Bank (O), on premises. R. C. Ballinger (C), 218 North Thirteenth street. Repairs.

Storage, Schuylkill avenue and Christian street, \$1,200. De Fraina Sand Co. (O), Beach and Berks streets. James Bechtel (C), Fifteenth and Race streets. Brick addition, 1 story, 8x11 feet, concrete roof.

Store and dwelling, 305 West York street, \$300. Hand-in-Hand Building Association (O), Howard and Girard avenue. Henry A. Hobert (C), 2620 East Cumberland street. New flush bulks.

Garage, 750 North Brooklyn street, \$500. Mrs. A. L. Butz (O), 735 North Forty-first street. James M. Holm (C), 5556 Arch street. Install heating plant.

Apartment house, 1604 Arch street, \$700. George L. Parker (O), 1537 Chestnut street. John Baizley Iron Works (C), 514 South Delaware avenue. Standard outside fire escape.

Apartment house, 914 Spruce street, \$880. Mutual Assurance Co. (O), 240 South Fourth street. John Baizley Iron Works (C), 514 South Delaware avenue. Standard fire escape.

Dwelling, 1122 North Thirty-ninth street, \$600. M. Kizer (O), on premises. J. Goschian (C), Philadelphia, Pa. Flush bulks.

Tenement house, Twenty-second and Montgomery avenue, \$2,500. Sarah Stover (O), 1927 North Twelfth street. Abner Spencer (C), 5449 North Twelfth street. Alterations.

Dwelling, 1625 Montrose street, \$330. Chas. Thomas (O), on premises. Robert Baile Co. (C), 813 South Nineteenth street. Hot water heating system.

Dwelling, 1719 West Norris street, \$890. Ester Greenfield (O), Seventh and McClellan streets. Jacob Newborn (C), 1731 North Eighth street. Repair fire damage.

Crane railway, Milnor and Bleigh streets, \$5,000. Philadelphia Steel and Forge Co., on premises. Belmont Iron Works (C), Twenty-second and Washington avenue.

Dwelling, 336 Spruce street, \$500. Mr. Walter (O), on premises. N. Blumenthal (C), 313 Spruce street. Rear addition, 1 story, brick, 14x11 feet, slag roof.

Store and dwelling, 1715 North Eleventh street, \$330. Harry Holtzman (O), on premises. Harry Glass (C), 1809 North Seventh street. Flush bulks.

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of "Guide" advertisers.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones.—Exchange.

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**
Tasker Street Wharf, Delaware River, Philadelphia.

NOTES ON CONCRETE

Mixing.

If the concrete is to be mixed by hand, a level, watertight platform large enough so that two men using square-pointed shovels can work upon it at one time, is needed. No more concrete should be mixed at one time than can be placed within thirty minutes after mixing. If from any cause a portion of the batch is unused and begins to stiffen, such concrete should be thrown away, and be retempered by adding water and remixing. Proportioning is usually done by volume. One cubic foot is a convenient unity and 1 sack of Portland cement (94 pounds net) is considered as 1 cubic foot. A bottomless box of 1 cubic foot capacity is convenient for measuring sand and pebbles, or broken stone, so that correct volumes of these may be combined with each other and with the cement.

When used, the measuring box is set on a mixing platform, and after the required amount of sand has been shoveled in and measured, the box is an even layer on the mixing platform. Next the cement, which need not be measured as each sack may be considered as 1 cubic foot, is spread in an even layer on top of the sand, after which the two should be turned two or more times by using square-pointed shovels until the streaks of brown and gray have merged into a uniform color. Pebbles, or broken stone, first thoroughly wet, are then measured and then spread in a layer in the mixed cement and sand and all of the materials again mixed by turning with shovels. Then a depression or hollow is shoveled in the center of the pile and water added, preferably by a spray from a hose, while two or more men turn the materials with shovels, adding water while this is being done until the cement, sand and pebbles have been thoroughly and uniformly mixed to the desired consistency. This will usually require three turnings after the water has been added.

Machine Mixing.

Concrete mixers have been highly perfected and there are many types now on the market. Batch mixers, regardless of the type of drum, permit materials to be introduced in any order desired. After the materials have been placed in the drum, it should be given a few revolutions to thoroughly mix the materials in the dry state. Then the required amount of water should be added and the drum revolved for a specified time, or a specified number of revolutions, either of which should represent a period of mixing for at least one minute. Most batch mixers have attached to them a water tank by means of which a measured quantity of water for each batch may be added to the dry materials. Care should be taken not to place more materials in the drum than recommended by the manufacturer,

otherwise thorough mixing cannot be accomplished, nor should the mixer drum be revolved too rapidly, for that would cause the materials to cling to the inner surface of the drum rather than be tumbled about and thoroughly mixed. The materials for a batch should not measure in volume more than one-third of the full capacity of the mixer drum.

Mixers of the continuous type consist principally of a number of hoppers for the several materials—cement, sand and pebbles, or broken stone—and a semicircular trough containing blades or shovels fixed upon a revolving shaft. Dry materials are automatically fed from the hoppers to the discharging end, water being added while the materials are in the process of traveling along the trough. Concrete is therefore discharged continuously. Most engineers prefer mixers of the batch type because the measuring of materials can be positively regulated, while with a continuous mixer a variation in the amount of moisture in the sand or in the fluffiness of the cement will cause considerable variation in the relative proportions of these materials in a mixture.

Quantity of Water to Use.

For most classes of construction the correct amount of water in a concrete mixture is that which will make a concrete of quaky or jelly-like consistency. Less water is sometimes used for foundation concrete, where the wall is not to enclose a cellar or basement, that is, need not be watertight, but the quaky consistency is preferable wherever possible to use it. Such concrete, when placed in a pile, will tend to gradually flatten out of its own weight and when placed in forms, will settle to all parts of them with a small amount of puddling or spading rather than tamping. The mortar for surfaces of floors, where two-course construction is used, should be mixed with enough water so that it will work easily under the trowel. Such a mixture should be stiffer than would be described by the word "quaky." It would be necessary to scrape it from wheelbarrows when handling. An excess of water should always be avoided. Concrete block, brick and similar concrete products usually manufactured by machine, should be made of concrete just as wet as possible for the particular machine. In such work it is a general rule to use as much water as will permit quick removal of the mold, yet not sufficient so that the product will not retain its shape after the mold has been removed. It always must be remembered that the bonding action of cement in concrete depends upon the chemical changes produced by the water combining with the cement. Too little water prevents this action from being complete, and is therefore almost as objectionable as too little cement.

Cleanliness.

There have been many confusing opinions advanced as to the effect of clay, loam and similar foreign material in concrete mixtures. Engineers are, however, fairly in accord on certain conclusions. If clay exists as a coating on the particles of aggregate, it is undoubtedly injurious, because it will prevent a proper adhesion or bond of the cement. Laboratory tests have shown that the presence of from 5 to 10 per cent. of the clay may not be objectionable, but as laboratory results cannot always nor generally be obtained in field work, it is much safer not to use sand and pebbles containing even a small percentage of clay or other foreign matter. If such matter is present the sand and pebbles should be washed.

A coating of vegetable matter on the sand grains appears not only to prevent the cement from adhering to the surface of the particles, but often affects it chemically. A quantity of vegetable matter so small as to be impossible of detection by the eye, may prevent the mortar from ever acquiring any considerable strength. Concrete made with such sand usually hardens slowly.—"National Builder."

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

The man who does not advertise is like the man who stops his watch to save time.—Exchange.

The darkest hour in any man's life is when he sits down to plan how to get money without earning it.—Horace Greely.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., December 15, 1916.—Sealed proposals will be opened in this office at 3 P. M., January 26, 1917, for the construction, complete, of the United States post office at Waterloo, N. Y. Drawings and specifications may be obtained from the custodian of site at Waterloo, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.
